[redacted], somefunction(<[redacted]>). [redacted].

[redacted].

[redacted]?

[redacted]: Inheritance Is Not Subtyping

[redacted]:

wiki > Subtyping should not be confused with the notion of (class or object) inheritance from object-oriented languages =>

> subtyping is a relation between types (interfaces in object-oriented parlance) whereas inheritance is a relation between implementations stemming from a language feature that allows new objects to be created from existing ones. =>

> In a number of object-oriented languages, subtyping is called interface inheritance, with inheritance referred to as implementation inheritance.

[redacted] LSP:

People (including me) have made the mistake that this is about inheritance.

[redacted] LSP [redacted].
