[@goddeketal](#)

1/: The inventor of the corona PCR-Test [@c_drosten](#) is one of the #protagonists of the current crisis. He is known for involving himself in contradictions. In 2014, he gave a legendary #interview to [@wiwo](#) (<https://t.co/jzTRh5Suhc>) that I will address in this ■■short thread■■.

2/: The interview is significant because [@c_drosten](#) made totally sane statements back then that follow the principle of common sense. Considering his involvement in the "genesis of the current pandemic", his assertions appear in an entirely different light.<https://t.co/PDHboUevSQ>

The genesis of a pandemic.

The [#Corona](#) crisis began with a panopticon of absurd events, improbable coincidences and outright lies.

Time for a review of the impossibilities.

[@c_drosten](#) 3/: In 2014, for instance, washing the hands was sufficient against being infected by coronaviruses. Several years he demands measures that destroy national economies and social life worldwide.

DROSTEN ON: VIRUS PREVENTION

The most effective measure is to often wash your hands. ***In the case of coronaviruses, water and soap are sufficient.*** Most cold viruses, coronaviruses are transmitted through direct contact, for instance when shaking hands. From the hands, the pathogens reach the mouth and nose, where they begin to multiply.

 **WirtschaftsWoche**

From a scientific point of view, it is absolutely necessary to quickly and drastically reduce the still significantly too high number of new infections by a ***hard lockdown. Social contacts should be reduced*** to a very narrow circle.

NDR-Podcast (8 Dec 20)

4/: Young [@c_drosten](#) also severely criticized the fact that Saudi Arabia used the PCR method to detect potential infections. From his point of view, that specific method could lead to many irrelevant cases. Nowadays, his view shifted his opinion towards 'collective punishment'.

DROSTEN ON: POSITIVIE CORONA-CASES

The PCR method is so sensitive that it can detect a single hereditary molecule of this virus. If, for example, such a pathogen flits across a nurse's nasal mucosa without her noticing anything else, ***then she is suddenly a Mers case.*** Where previously terminally ill people were reported, now mild cases and people who are actually ***perfectly healthy are suddenly included in the reporting statistics.***

 **WirtschaftsWoche**

We have to take shortcuts. If one person in a household tests positive, we could, for instance, ***consider the entire household to be positive,*** even without a test.

ZEIT (20 Mar 20)

5/: Whereas he demands "testing, testing, testing" nowadays and spreads panic and fear via (social) media, he heavily condemned that behaviour of Saudi media in 2014. On top of that, he expressed his concern that medial panic could increase the number of lab tests significantly.

DROSTEN ON: MEDIA & TESTING

In the region, there is hardly any other topic in the TV news or daily newspapers. I fear that the ***current increase is more due to increased attention.*** It's no different in this country. If BILD or the evening news report an outbreak of a certain virus, ***the number of laboratory tests would increase significantly.***

 **WirtschaftsWoche**

A compact conversation with "Der Spiegel" about my current assessment. More information also in the last two podcast episodes. The early detection of clusters is crucial. For this, ***"testing, testing, testing" is really needed.***

Twitter (29 May 20)

6/: The following statement should be framed since his statement from 2014 is extremely rational, whereas he nowadays claims to get everybody tested (even though he is also contradictory in this specific case depending on the 'form of the day').

DROSTEN ON: PCR TESTING

Saudi Arabia should adhere to the previous definitions of the disease. **Only the real cases are interesting.** It is questionable, whether asymptomatic or mildly infected hospital workers are really virus carriers. Even more **questionable is whether they can pass the virus on to others.** The Ministry of Health should make a stronger **distinction between medically necessary diagnostics and scientific interest.**

WirtschaftsWoche

The aim here is to get through a potentially difficult period in which we will no longer be able **to test all people with PCR.**

NDR Podcast (01 Sep 20)

7/: The fact that he supports using his PCR test might be linked to the fact that he has strong economic ties with Olfert Landt, who is his buddy and PCR manufacturer. Someone with such strong conflicts of interests should not be the government's advisor. <https://t.co/ybvqO3dgHp>

1/ In this short [thread](#), I will tell you why the inventor of the [#COVID-PCR](#) test (and German [#Fauci](#)), [@c_drosten](#), is a [pyromaniac firefighter](#) with strong economic ties while spreading highly contradictory messages. pic.twitter.com/lo0YE0wxlh

— Dr. Simon [@goddeketal](#) [January 22, 2021](#)

8/: His maybe most impressive statement in the 2014 interview was that he correctly said that our bodies are constantly attacked by viruses and bacteria and that our immune system can usually handle them before they can do any harm.

DROSTEN ON: VIRUSES & BACTERIA

*Our body is constantly being attacked by viruses and bacteria. However, they often fail at barriers such as the skin or the mucous membranes in the nose and throat. There, they are **successfully warded off** before they can do any harm.*

9/: There is not much left from this correct assumption he made in 2014. Instead, he seemed to have turned 100% big-pharma, supporting the vaccination of the whole world with insufficiently tested substances.

↻ Christian Drosten Retweeted

Jeremy Farrar ✓ @JeremyFarrar · Feb 18

Would be a tragedy. All approved vaccines are safe, highly effective, will save countless lives & increasing data reduce transmission. I will be delighted to have any vaccine. Very happy to have @AstraZeneca - Ox vaccine, or any other approved vaccine.

Vaccine-poor Germans shunning AstraZeneca jab

Doctors and public health officials pleaded with Germans Thursday to take up AstraZeneca vaccines against the coronavirus after muddled ...

10/: Almost everything about @c_drosten is shady. His doctoral promotion, his involvement in the swine flu fakedemic, his economic ties to Olfert Landt's company Tib-Molbiol, his professor status (without habilitation), and now his involvement in the current "pandemic".
