Twitter Thread by Simon Wardley

Simon Wardley
@swardley

X : We need to adapt to our new reality.

Me : A question?

X : Should we start with organisation or operating model first?

Me : Neither. Start with doctrine i.e. basic principles of your company. This will lead you to landcape which will lead you to structure + operating model.

Wardley's Doctrine (universally useful patterns that a user can apply regardless of context)					
Communication	*Development*	*Operation*	*Learning*	*Leading*	*Structure*
IV			Listen to your ecosystem	Exploit the landscape	Design for constant evolution
				There is no core	No single culture
III		Optimise flow	*Bias towards the new*	Commit to the direction	Provide purpose, mastery & autonomy
		Do better with less		Be the owner	
				Inspire others	
		Set exceptional standards		Embrace uncertainty	Seek the best
				Be humble	
II		Focus on the outcome	Manage inertia	Move fast	Think small teams
		Think fast, inexpensive, restrained and elegant			
		Use appropriate tools	Manage failure	Strategy is iterative	Distribute power and decision making
		Be pragmatic			
		Use standards	Effectiveness over efficiency		Think aptitude and attitude
Phase I	A bias towards open				
	Common Language	Know your users	Know the details	Bias towards data	*STEVE PURKIS VARIATION
	Challenge Assumptions	Focus on user needs			
	Understand what is being considered	Remove bias and duplication			
		Use appropriate methods			

X : Don't we need to get the structure right though?

Me : Structure against what? If you don't understand the landscape that you operate in then how do you structure around it? How do you decide what your operating model is? Awareness comes first and that needs those principles.

X : Explain?

Me : Pretend you're running a tea shop (I'm a Brit, I like tea shops). First thing you need to do is to know who your users are - the public, the business for example (there are more like regulators etc).
PUBLIC   BUSINESS

Doctrine
Know your users

... but just knowing the users is not enough, you need to know what they need i.e. a cup of tea, maybe something more like entertainment or a nice piece of fruitcake

PUBLIC   BUSINESS

CUP OF TEA

Doctrine
Focus on user needs

... but just knowing what they need is not enough, you need to know what goes into making a cup of tea, the chain of chains that it is built upon. You need to know the details ...
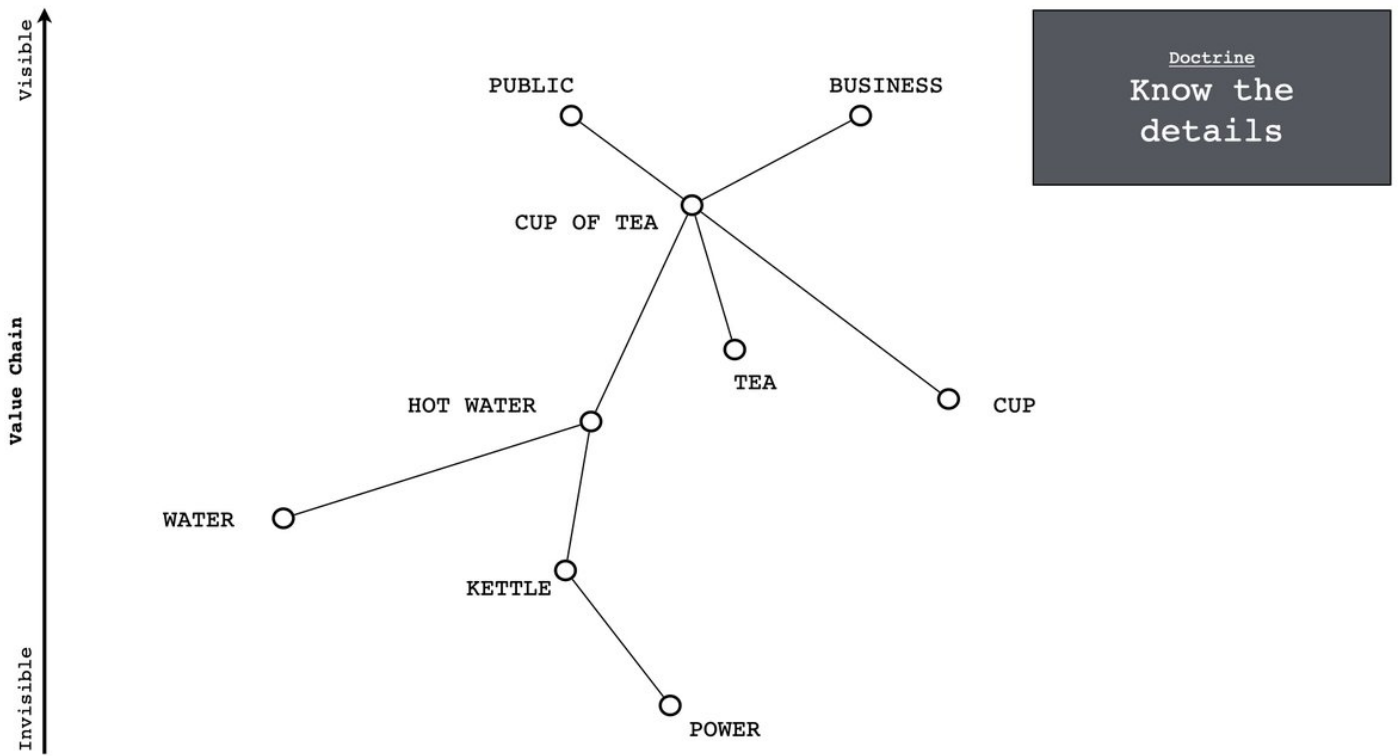

... but knowing the details is not enough, there is a world of difference between a custom built kettle and one you buy from argos. so you need to understand what is being considered ... this is what we call a map ...
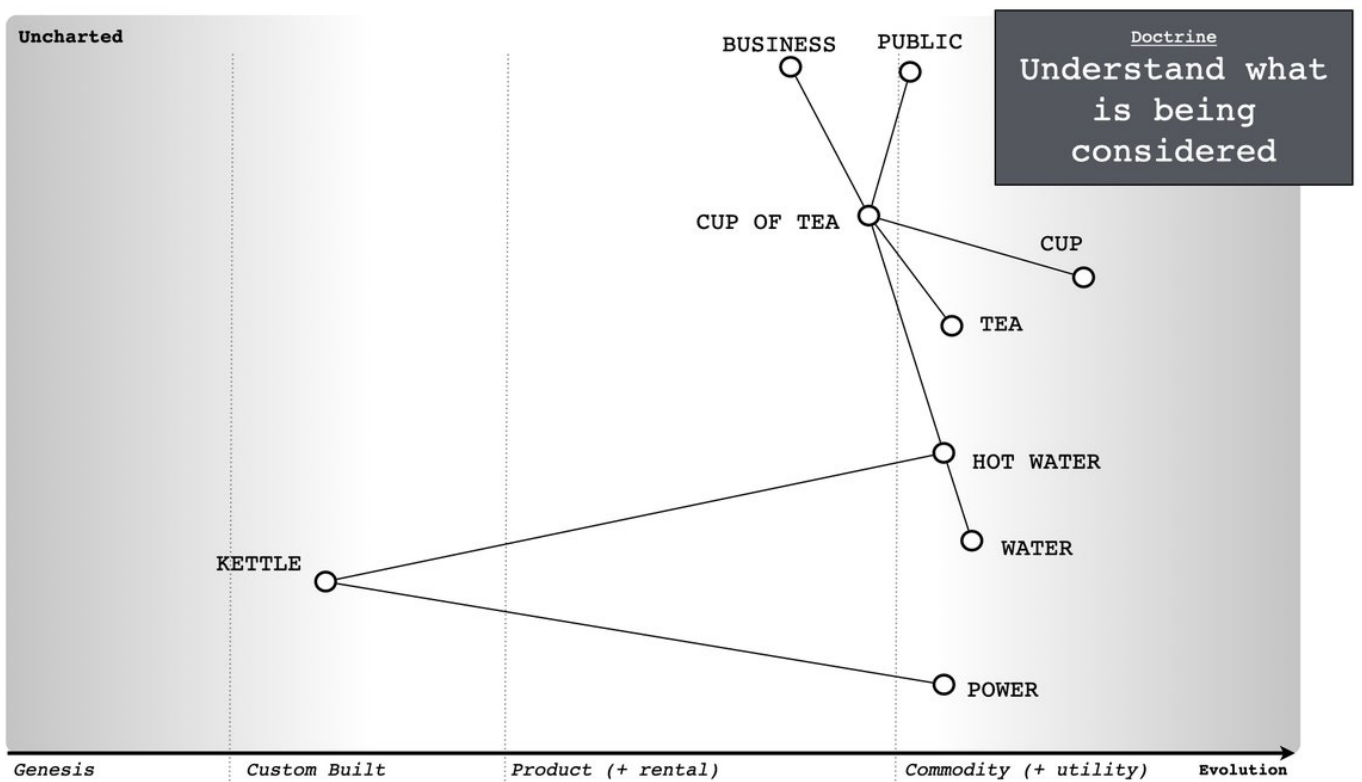

... now that we have a map, we have a common language where others can add components we are missing or discuss how we should think about those components ...
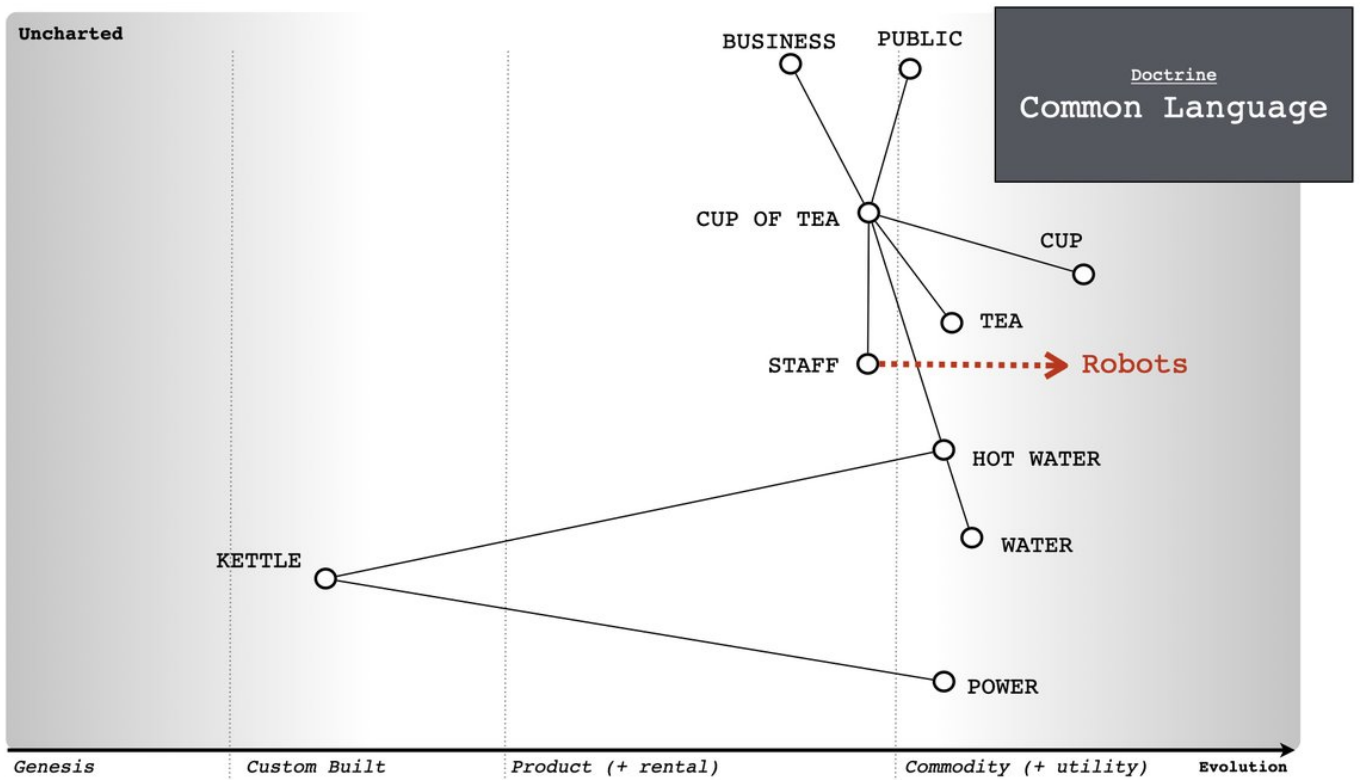

... because we have a common language, we can now challenge the assumptions because we are expressing our assumptions in the map. The key is to challenge the map (not the person) ... it's the map that's wrong ...
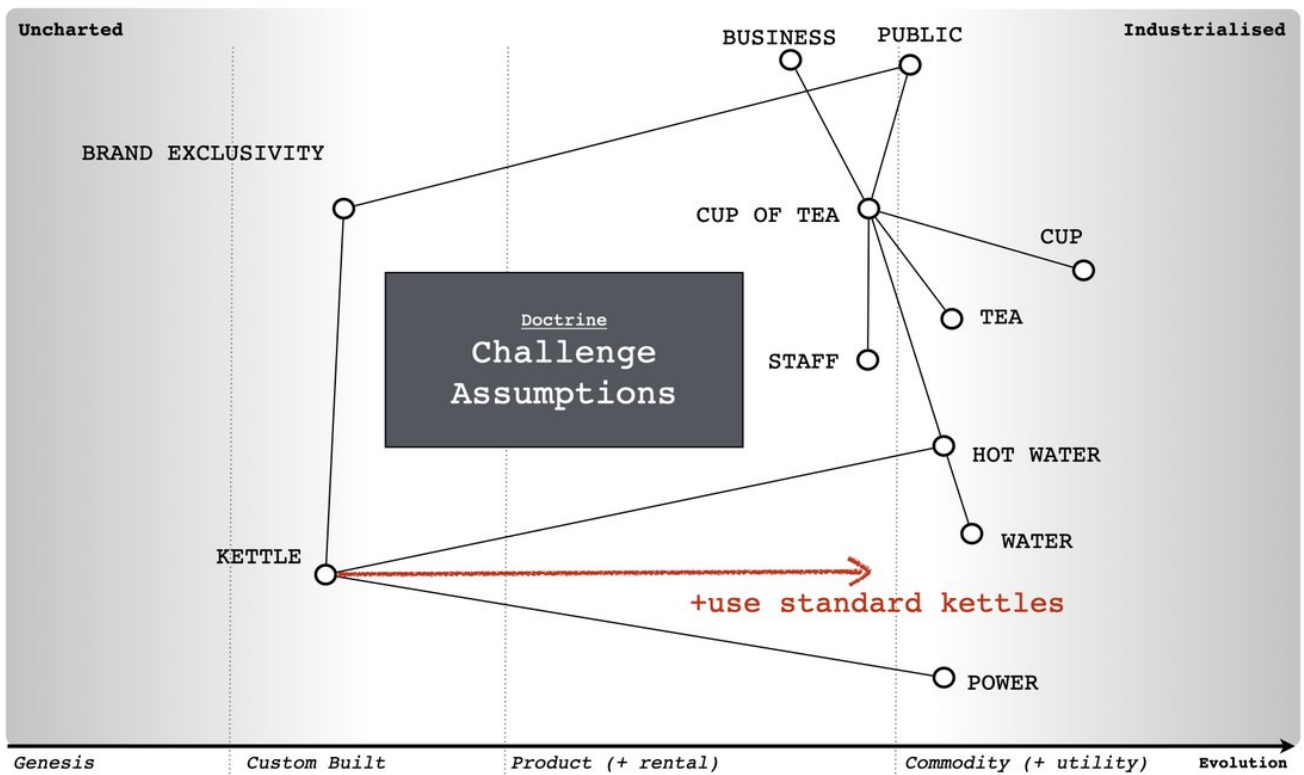

... as we build more maps, we discover we have duplication and bias between maps. We can literally see it by comparing maps and because we've now become good at challenging then we can remove it ...
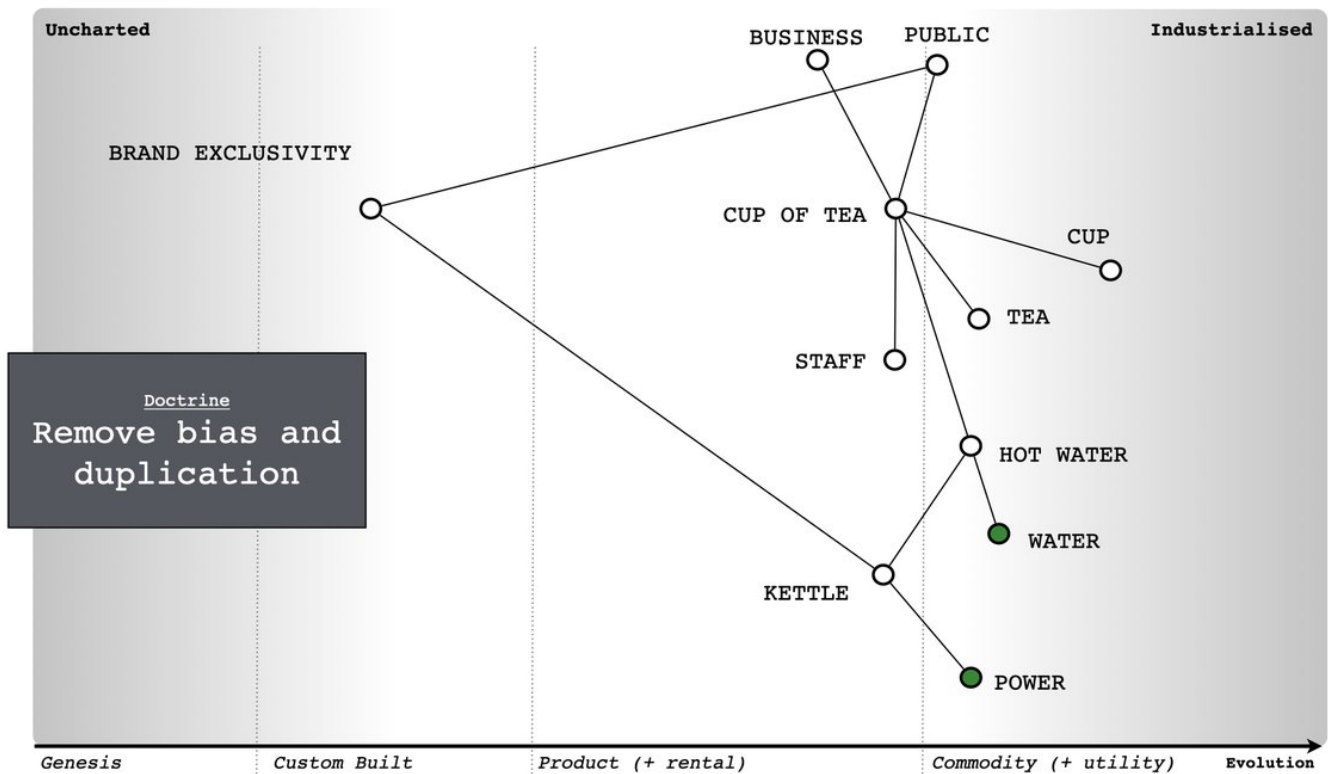

... with our understand of the landscape, we can start to apply appropriate methods. All methods have a context where they work, there is no one size fits all ...
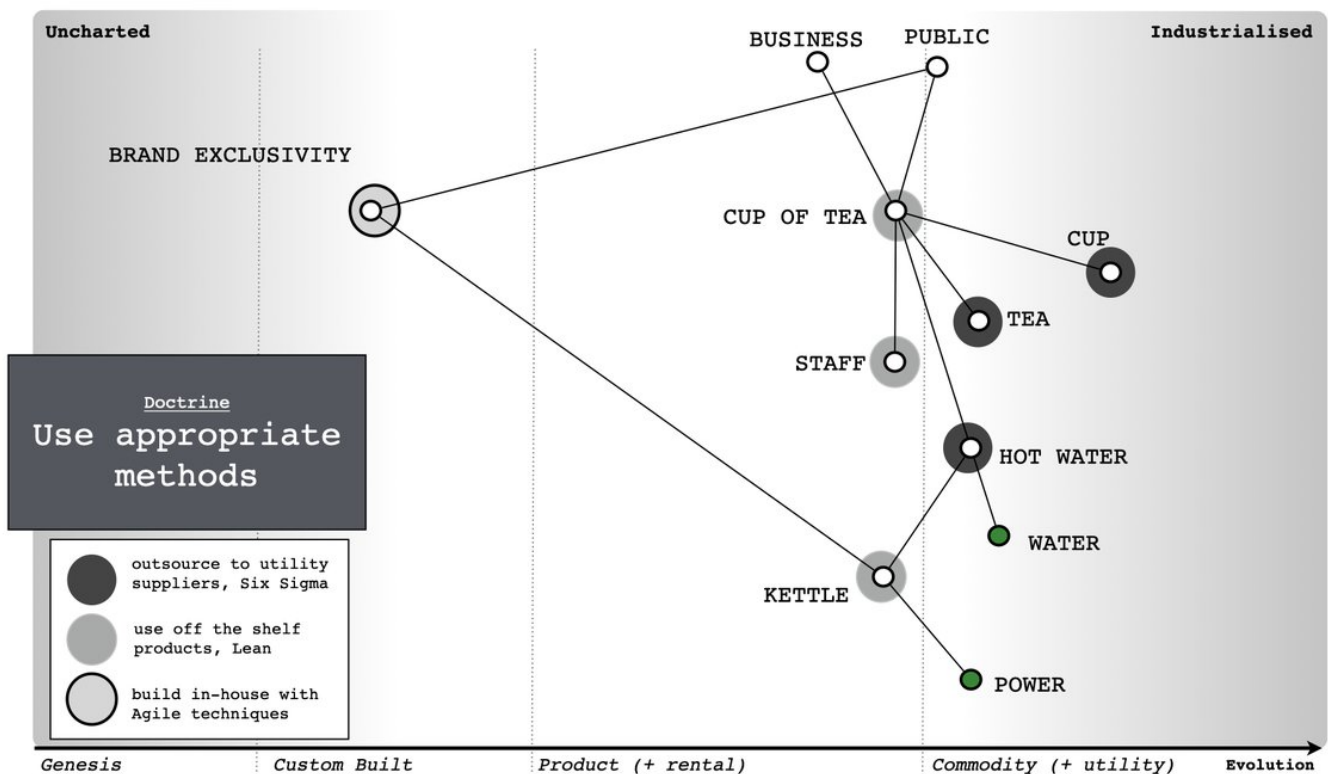

... we can embed challenge, communication (maps) and learning (i.e. which method goes where) through the use of pre and post mortems. We call this "spend control" and it's all about learning from those maps (i.e. data) rather than using data to justify a story we like.

PRE Mortem CHALLENGE
SPEND CONTROL

POST Mortem LEARNING

Doctrine
Bias towards data

... you have now completed all phase I of the doctrine. You have some awareness! Congratulations!

You have earned the right to talk about concepts like organisation, operating model and strategy ... just don't try and do them yet. You've got more principles to fix first.

	Communication	**Development**	**Operation**	**Learning**	**Leading**	**Structure**
IV				Listen to your ecosystem	Exploit the landscape	Design for constant evolution
					There is no core	No single culture
III			Optimise flow	Bias towards the new	Commit to the direction	Provide purpose, mastery & autonomy
			Do better with less		Be the owner	
					Inspire others	
			Set exceptional standards		Embrace uncertainty	Seek the best
					Be humble	
II		Focus on the outcome	Manage inertia	Bias towards action	Move fast	Think small teams
		Think fast, inexpensive, restrained and elegant				
		Use appropriate tools	Manage failure		Strategy is iterative	Distribute power and decision making
		Be pragmatic				
			Effectiveness over efficiency			Think aptitude and attitude
		Use standards				
	A bias towards open					
Phase I	Common Language	Know your users	Know the details	Bias towards data	*STEVE PURKIS VARIATION	
	Challenge Assumptions	Focus on user needs				
	Understand what is being considered	Remove bias and duplication				
		Use appropriate methods				

Wardley's Doctrine (universally useful patterns that a user can apply regardless of context)

X : What about phase II?
Me : Have you done phase I?

X : Not quite.

Me : Ok. Was the tea shop example useful.

X : It's pretty good.

Me : Ok. Well, in which case I better put some maps together to explain phase II. Note to self ... #to_be_continued #phases
