Twitter Thread by Brainhub

"Every time you write a new code, you should do so reluctantly, under duress, because you completely exhausted all your other options." - Jeff Atwood @codinghorror

Hence the growing popularity of the no-code software.

A quick thread ■

NO-CODE IS EATING THE WORLD

The concept isn't new (remember Microsoft FrontPage?) but the capabilities that the no-code and low-code tools offer today change the way individuals and businesses approach building digital products.

WHY IT'S INTERESTING? ■

2/

No-code tools let you build things without writing code. Websites, mobile apps, online stores – all that (and a lot more!) can be built without any prior coding experience.

3/

Even though the "no-code" label is often an oversell (many platforms are "just" low-code and still require some low programming effort), the capabilities offered are game-changing, especially at the first stages of product development.

4/

Key no-code platforms:

- •@Shopify: e-commerce
- •@canva: design
- @airtable: databases
- @webflow: web development
- •@zapier: process automation
- •@bubble: mobile app development

5/

LOOKING AHEAD

Gartner states low-code platforms will be responsible for more than 65 percent of all app dev activity by 2024
Forrester expects the low-code market to represent \$21bn in spending by 2022
No-code market will be valued at \$46bn by 2023 (\$8bn in 2018)

6/

From a development perspective, low-code software should be seen as the next big thing after frameworks and APIs. A productivity hack that allows us to do more with less.

7/

From a business perspective, no-code tools allow business owners to put more effort into what really drives results: business strategy, market traction, community-building, sales and marketing.

The product itself is no longer a roadblock. Or an excuse.

For a deeper analysis of the no-code movement, definitely read this great piece from <u>@alexandre_dewez</u> and <u>@thibault_brnrd:</u>
