1 of 19: TANK YOU FOR YOUR SERVICE

You crazy for this one, #TankTwitter

The Battle of the Bulge was among the largest tank battles in US history.

[If you are here seeking something other than straightforward analysis of a historical event, please look elsewhere]

2 of 19:

After the war, a narrative developed that American tank units (7th, 9th, 10th Armored Divisions, in particular) overcame a German tank superiority in the Battle of the Battle.

[3 of 19] We'd like to put that idea to the test.

We've discussed Kampfgruppe Peiper outmaneuvering our tanks early on with the newest German tank, the 70-ton Tiger II.

The remaining German forces had the Tiger I and Panzers.

[4 of 19]

Lt. Colonel Robert Erlenbusch commanded company A, 31st Tank Battalion in St. Vith during the fighting. After the war, he wrote a paper for III Corps in which he stated that German Panther and Tiger tanks were far superior to the American Sherman and Stuart tanks.

[5 of 19]

American tanks had success in Ardennes only if they hit "lucky shots" according to Erlenbusch. Many historians still reference Erlenbusch's findings.

[6 of 19]

But, while the Tiger tank had a better gun (88mm) and better armor than ours, our Sherman tanks may have actually had superior combat performance in the Ardennes for offensive operations.

Why do we say that? Well, 4 points here.

Ready? Let's get into 'em.

[7 of 19]

Point 1: the German Tiger I and II, the new tanks Peiper rolled out, were "maintenance dogs." They broke down all the time!

[8 of 19]

It didn't help that Germans put their newest, least experienced troops in their newest tanks & that the Tiger II was very difficult to recover, often taking 1 or 3 recovery vehicles to move each tank

[9 of 19]

Point 2: the Tigers were fuel hogs. ANY army would have had trouble keeping a tank force that size refueled with those gas guzzlers. Tiger II tanks consumed two gallons per mile!

[10 of 19]

Point 2: the Tigers were fuel hogs. ANY army would have had trouble keeping a tank force that size refueled with those gas guzzlers. Tiger II tanks consumed two gallons per mile!

[11 of 19]

Still Point 2: Look, there is a reason Nazi loser group Kampfgruppe Peiper withdrew on foot. They had no gas and their tanks were broken!

[12 of 19]

Point 3: the German tanks had a slow-turning power traverse turret (slow due to the heavy weight of the turret) while the lighter Shermans' power traverse turret moved easy and quickly.

[13 of 19]

Still Point 3: In a tank-on-tank fight, the lighter American tanks were just much faster. (Take a look at the 2014 movie "Fury" starring the super-handsome Brad Pitt & you'll see what we mean)

[14 of 19]

Point 4: We had better mobility (many will debate us here). Remember the Rick Atkinson line: "In battle, topography is fate." The Germans were trying to cross Class 20 bridges over bad/narrow Belgium roads with 70-ton tanks. Bridges collapsed, tanks flipped, got stuck

[15 of 19] Point 4 cont: Many German tankers preferred the lighter Mark V Panther medium tank as it was light enough to drive off-road while the heavier Tigers were restricted to roads and heavy bridges, making them easy targets for anti-tank teams and eventually Allied airpower.

[16 of 19]

Many historians are enamored with the Tiger and Panzer tank. But, we had better mobility & better reach (less fuel required).

Also, if you hit a Tiger tank on the side or even better in the rear, you could kill it.

[17 of 19]

Having a heavy tank is great, but if it doesn't work when your track brakes and you now have an expensive pillbox with poorly trained infantry inside.

[18 of 19]

So that's it. That's the story.

Part of this is a naked attempt to appeal to the rest of #TankTwitter and engender support for our history threads.

But mostly this is thoughtful analysis and research.

[END]

So, over to the self-crowned heavyweight champions of #TankTwitter, [@PatDonahoeArmy](#), [@Mother_of_Tanks](#), [@TomHeartsTanks](#), and [@TradocDCG](#) [please tag all the others we don't know about]. What do you think about all this? What do you have for the people?
