Sharing here a strategy that gave me most consistent profit in intra-day in all these years. Narrow Range break out / break down.

Here's how i scan the stocks :

- **3ib**
- **3iib**
- **NR7+IB**
- **NR14+IB**
- **NR21+IB**
- **Double Doji**

Stock Selection Criteria :

- IB/Smaller Doji range is around 1%
- Beta is above 0.75
- How has the stock performed in the past with this strategy

Entry :

- Long/Short on Previous Day High/Low break

Stop Loss :

- Opposite side of previous day candle

Target :

1%, 2%, 3%

Will post my stock selection here as and when i can as i have seen that in spite of sharing every single rule, people are still not getting the stocks selection correctly.
