Let's talk about the COMMON MISTAKES DONE BY STARTING FARMERS.
1. Assuming you know farming because you grew up digging. DIGGING is not FARMING.Research, Learn and acquire the skill.

2. Buying cheap seeds or getting from neighbours garden or previous harvest. its the worst mi

3. Diversification. You can't grow everything you want to grow tomatoes, nakati, egg plants, green pepper?!!■ Choose 1 or 2, concentrate on them, dont over split resources.

3. Panic selling due to poor planning. Start looking for market 1 - 2 months before your harvest is

is ready. It saves you panic selling that ends up in losses.

4. Never send workers for anything that involves chemicals, weeding, or harvesting. If you dont have time. Dont do it.
