Edited: 7 May 2020. The Pirbright Institute is aware that misinformation regarding the Institute and its research is circulating on social media following the COVID-19 outbreak. The facts regarding our coronavirus research and funding can be found in this statement.

The Pirbright Institute is a publicly funded private company. We have a diverse range of major stakeholders, and receive strategic funding from the Biotechnology and Biological Sciences Research Council (BBSRC) which is part of UK Research and Innovation (UKRI).

Our major stakeholders are:

- Biotechnology and Biological Sciences Research Council (BBSRC)
- UK Department for the Environment, Food and Rural Affairs (Defra)
- Wellcome Trust, Medical Research Council (MRC) and other research funding agencies
- International funding and disease control agencies, such as OIE, WHO, the European Commission, Bill and Melinda Gates Foundation
- Industrial producers of veterinary vaccines and antivirals
- Farmers and livestock keepers

R. Lieber

R. LIEBER, Systems Engineering, Moorestown Missile and Surface Radar Division, Defense Electronic Products, Moorestown, N.J., is recipient of the 1962 David Sarnoff Outstanding Achievement Award in Engineering . . . "*for contributions to the field of high-precision space tracking and navigational systems.*"

MR. LIEBER has contributed new and fundamental knowledge to high-accuracy prediction of satellite and missile position using surface-based tracking data, which opens new avenues to the solution of satellite tracking problems. He has made important advances in the integration of tracking, communication, and telemetry functions for support of space missions and has also pointed the way toward vehicle attitude determination from the earth. The applications for which he has developed solutions include ship, submarine, and aircraft navigation, and surveying of land locations. He has worked out commercial as well as military systems applications. As an Engineering Leader, he has demonstrated outstanding ability to plan the effort of and obtain maximum wholehearted support from the senior engineering personnel in his group.

Robert I. Lieber (R. Lieber). (Apr. 01, 1962). Apr-May 1963, 1962 David Sarnoff Outstanding Achievement Award in Engineering, Systems Engineering, Moorestown Missile and Surface Radar Division, Defense Electronic Products, Moorestown, NJ, Vol. 07, No. 6, p. 32. *RCA Engineer.*

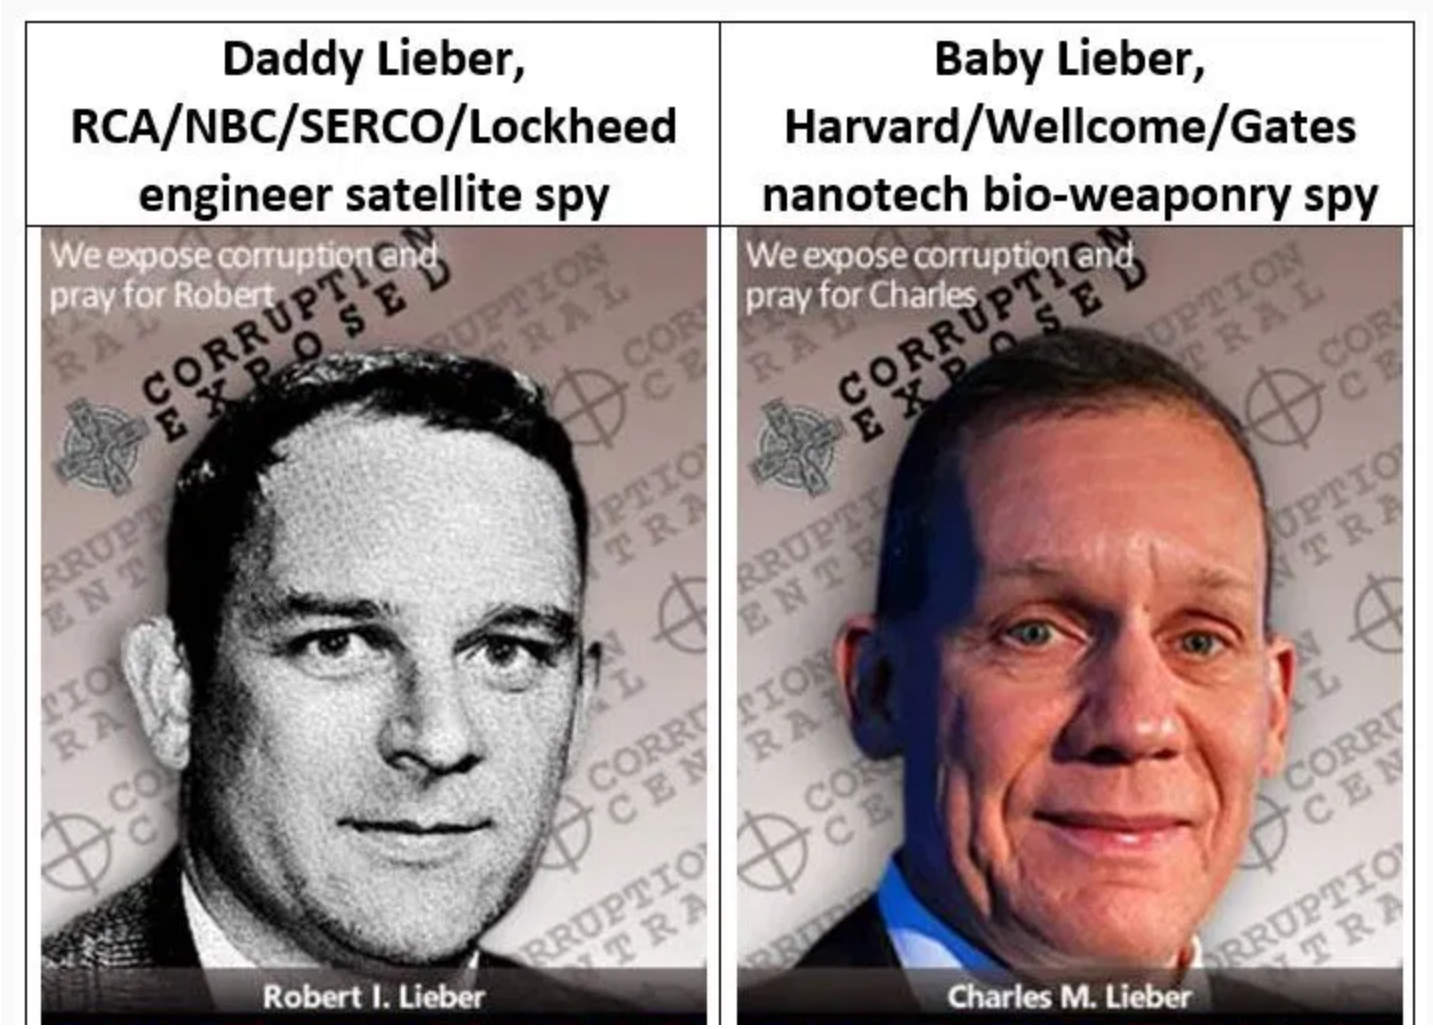

Robert is the father of **Harvard** carbon nano bio weaponry professor **Charles M. Lieber NEVER** speaks about his father or family in his prolific biographies and honors. His grandfather and stepmother, **Leo and Fannie (ne Cohen) Lieber**, emigrated to Philadelphia in 1893 from Botoşani, Romania, their birthplaces, aboard the SMS Bismark that they boarded in Hamburg, Germany. Leo's place of birth on the 1910 U.S. Census is listed as **"Rou. Yiddish" (Roumania, Jewish)** which was crossed out and changed inexpicably to **"Russia, Jewish"** in the 1930 census. Leo was a 50-yr. proprietor of **Leo Lieber Confectioner** in Philadelphia. Leo retired in 1953, and died in 1955. Fannie died in 1920. On Jul. 20, 1923, widower Leo remarried **Sophia (ne Maleson, sometimes Sophie)** whose parents were born in Russia. Three years later Sophie gave birth to **Robert (Charles M. Lieber's RCA satellite and radar spy father)** on May 6, 1926. Charles' great grandfather Israel (1849–1912) was born in Austria and raised eight children with Goldie (ne Frokler), including Leo, in Botoşani, Romania, Goldie's hometown. Leo was *not* born in Russia as he, or somebody, altered when they crossed out Romania and overwrote Russia on the 1930 census. Investigators suspect this alteration/forgery is related to Robert's **Top Secret** security clearance ca. 1952 before he went to work for RCA (now British **SERCO**, **QinetiQ**) in spy satellite and missile imagery and tracking.

With their histories of false and misleading government documents alone, how did Robert and son Charles M. Lieber ever get Top Secret U.S. clearances?

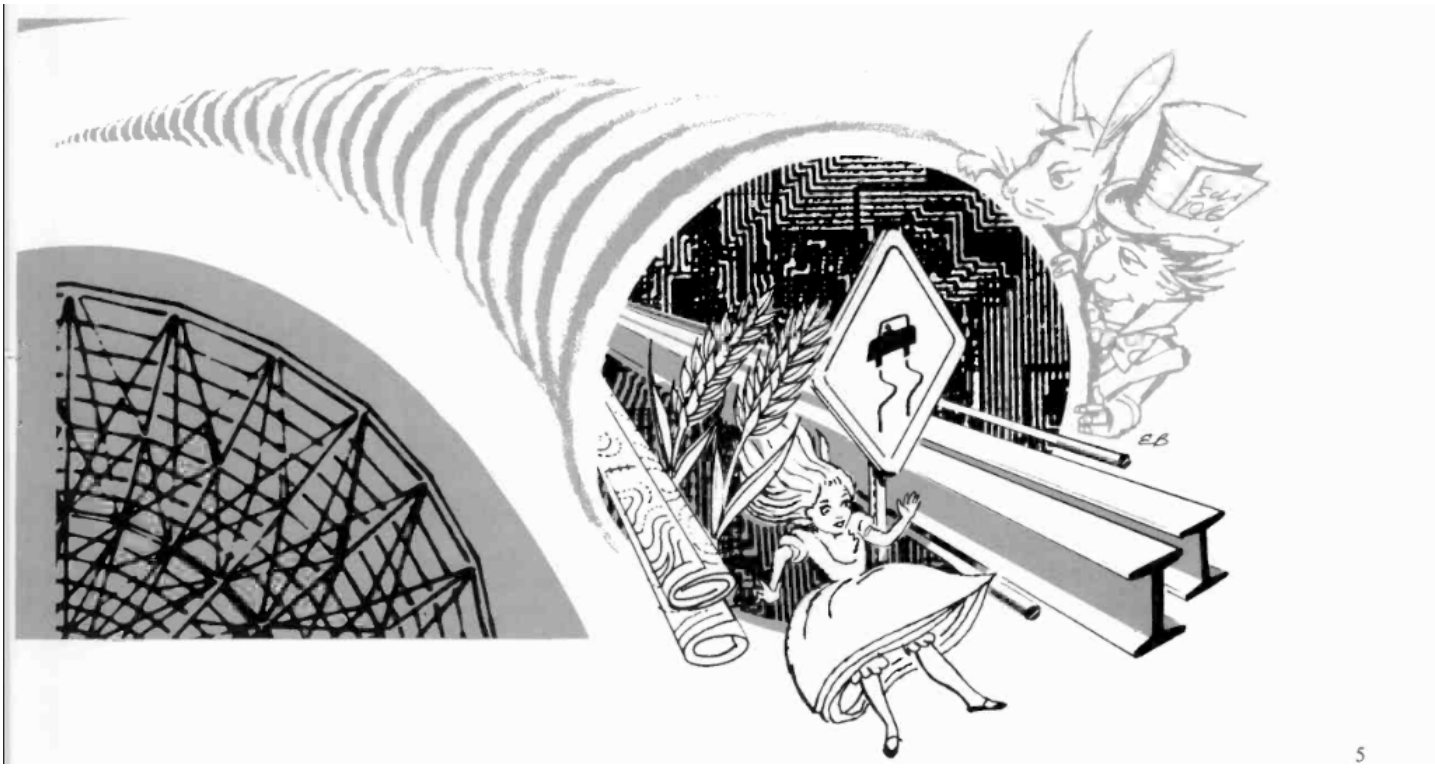

Robert's son, Leo's grandson, **Charles M. Lieber, was indicted on Jan. 28, 2020 in Boston** on fraud and espionage charges. He was accused of conspiring with the **People's Republic of China**, including **Wuhan University of Technology**, on his carbon nanotube, nanowire and nanobud research. These nano devices can be used as bioweapons to deliver pathogen payloads, like Coronavirus, that can be triggered by his father Robert's **5G AEGIS** satellite systems. Robert was a senior engineer-spy who built wireless, satellite, surveillance and killing systems still in use today. **RCA / NBC / BBC / SERCO / QINETIQ / C.I.A. / U.S. Navy / Privy Council** executives, including **David Sarnoff (NBC)**, were/are members of the British-American **Pilgrims Society** and its U.S. minions, the **Senior Executive Service (SES)** and **DARPA**, among others. *Special Note*: The **British Monarch** has 100% **"Golden Share"** contol over the BBC, SERCO (RCA-NBC), QINETIQ and the Privy Council. **R.C.A. LIMITED** was renamed **SERCO LIMITED** on Jul. 29, 1987 (*Companies House, UK, No. 242246*).

It is not surprising then that Harvard Prof. Charles M. Lieber ***never mentions*** his father Robert's militaristic spy activities at RCA for the British-American Pilgrims Society and its **"Five Eyes"** weapons of **bio warfare, surveillance, propaganda and mind control**. Charles is evidently a shill front man for the Pilgrims Society who received virtually unlimited funding from **Harvard, DARPA** (**ARPA** in Robert's day), **WHO, Gates Fndn, Wellcome Fndn & Trust and NIH** for his carbon nano bio research. (Note: The family data was *well* hidden, not to mention Robert's patents which are currently blocked from access at the **USPTO** [run by SERCO], but were discovered in the German Patent Office - *Thank You Miners!*)

Follow the White Rabbit

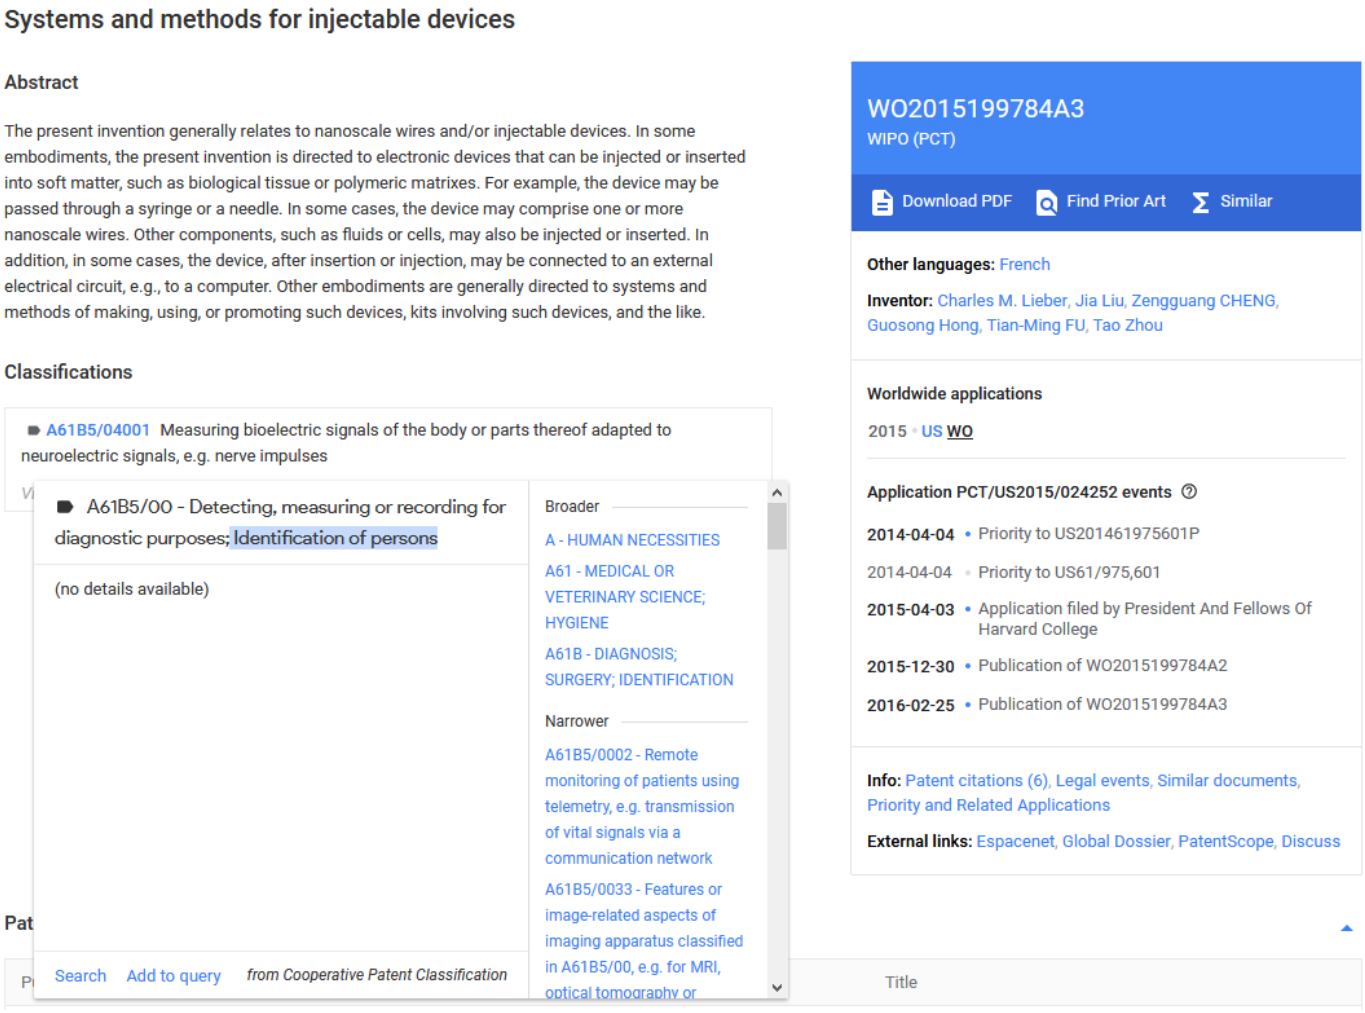

Injectible nanotech for studying vison.

#Lieber #nanotechnology #injection

> “Mesh electronics is a submicron-thick, large-area macroporous network,” explains team leader Charles Lieber. “We fabricate the meshes as flat 2D sheets using standard semiconductor photolithography-based techniques and suspend them (like a colloid) in aqueous solution. Our specific design, which we first reported on back in 2015, enables mesh electronics to be rolled up into a tubular structure and drawn into a syringe needle.”

Charles Lieber working on Injectible nano tech for idenification of people.
Reminder that not only was he working for Wuhan Institute of Technology until just before the "outbreak" but is also funded by DARPA.

RNase-Resistant Virus-Like Particles Containing Long Chimeric RNA Sequences Produced by Two-Plasmid Coexpression System▽

Yuxiang Wei,[1,2]† Changmei Yang,[1,2]† Baojun Wei,[1,2] Jie Huang,[1,2] Lunan Wang,[2] Shuang Meng,[2] Rui Zhang,[2] and Jinming Li[1,2]*

Graduate School, Peking Union Medical College, Chinese Academy of Medical Sciences, Beijing, People's Republic of China,[1] and Department of Immunoassay and Molecular Diagnosis, National Center for Clinical Laboratory, Beijing Hospital, Beijing, People's Republic of China[2]

Received 20 November 2007/Returned for modification 28 December 2007/Accepted 16 February 2008

RNase-resistant, noninfectious virus-like particles containing exogenous RNA sequences (armored RNA) are good candidates as RNA controls and standards in RNA virus detection. However, the length of RNA packaged in the virus-like particles with high efficiency is usually less than 500 bases. In this study, we describe a method for producing armored L-RNA. Armored L-RNA is a complex of MS2 bacteriophage coat protein and RNA produced in *Escherichia coli* by the induction of a two-plasmid coexpression system in which the coat protein and maturase are expressed from one plasmid and the target RNA sequence with modified MS2 stem-loop (pac site) is transcribed from another plasmid. A 3V armored L-RNA of 2,248 bases containing six gene fragments—hepatitis C virus, severe acute respiratory syndrome coronavirus (SARS-CoV1, SARS-CoV2, and SARS-CoV3), avian influenza virus matrix gene (M300), and H5N1 avian influenza virus (HA300)—was successfully expressed by the two-plasmid coexpression system and was demonstrated to have all of the characteristics of armored RNA. We evaluated the 3V armored L-RNA as a calibrator for multiple virus assays. We used the WHO International Standard for HCV RNA (NIBSC 96/790) to calibrate the chimeric armored L-RNA, which was diluted by 10-fold serial dilutions to obtain samples containing 10^6 to 10^2 copies. In conclusion, the approach we used for armored L-RNA preparation is practical and could reduce the labor and cost of quality control in multiplex RNA virus assays. Furthermore, we can assign the chimeric armored RNA with an international unit for quantitative detection.
