@Prathkum

Are you planning to learn CSS for adding some cool styling in your website?

In this thread, I'm covering all the basics and proper plan you need to know in order to getting started with CSS.

@prathkum

We need to know the importance of CSS first. Why CSS?

Well I guess CSS is the only language that add some visuals in website. Without CSS, Without it, websites would still be plain text on white backgrounds.

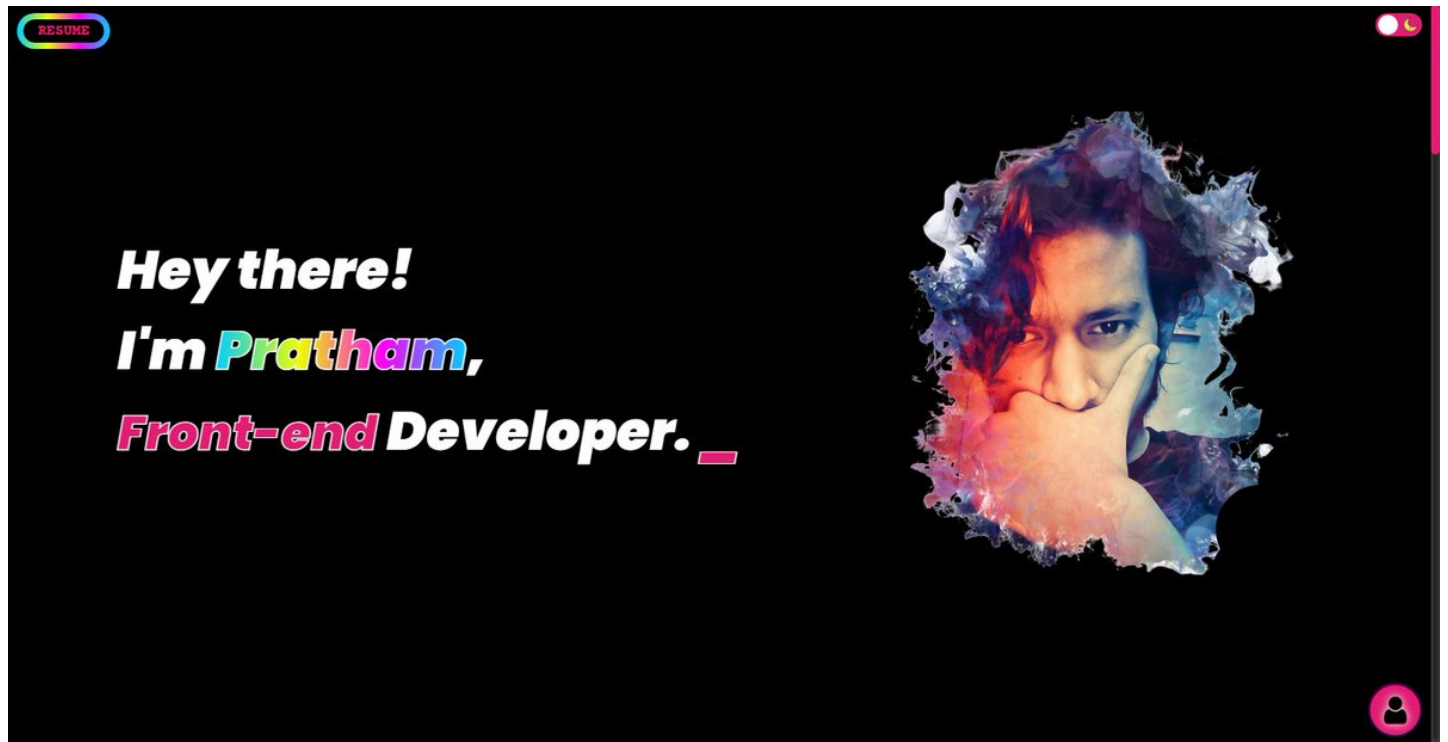

{ 02 / 17 }

Let's compare a website with and without CSS

Image 1: With CSS

Image 2: Without CSS

{ 03 / 17 }

I think this should be enough to explain you why CSS is so important. So let's start

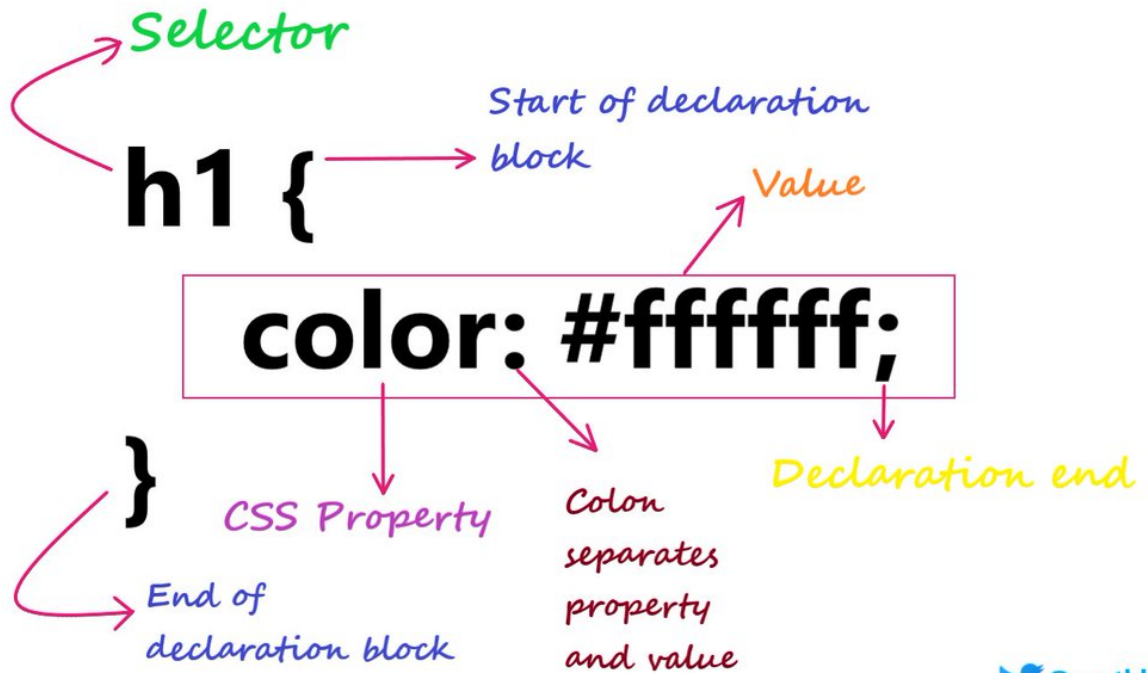

You can gain some decent amount of CSS knowledge in 30 days. And after that you will definitely be able to create some good looking website. Let's see how ■■

{ 04 / 17 }

First things first, you need to learn basic stuff

- How to link your CSS files with HTML file
- How to select elements so that you can add styling

{ 05 / 17 }

@prathkum

Color and background are the two properties you can start learning with. Although background is a shorthand property and its deep. So initially you can start with background-color property. Later on, you can explore more

{ 06 / 17 }

There are a lot of great color palette out there using which you can generate pleasant color schemes

Check this great tool for generating accessible colors. Just enter a color and generate nice color palettes

■ <https://t.co/kmjrXNUDIL>

{ 07 / 17 }

**Never waste Hours on finding the perfect Color Palette again!**

**JUST ENTER A COLOR!**

And Generate nice Color Palettes

#845EC2

GENERATE

The advertisement features a teal-to-blue gradient background with white line-art illustrations of astronauts on the left and right. A central text area contains the main headline, a sub-headline, a description, a color code input field, and a 'GENERATE' button.

Box model is the next important concept you need to learn. As everything is a box in web development.

Check out this detailed thread if you want to learn about box model from my thread

<https://t.co/2iPn0jfJO2>

{ 08 / 17 }

## Box Model

Everything on a website is a box. Therefore it is quite important to understand the box model concept in web development but it is confusing. Let's see some hidden facts about it in this thread

Moving forward, typography is an essential thing of web page. A good font can make your webpage and establish a strong visual hierarchy, provide a graphic balance to the website, and set the product's overall tone

You can add free fonts from Google's official site

{ 09 / 17 }

There are five basic classifications of fonts:

1. serif
2. sans serif
3. script
4. monospaced
5. display

{ 10 / 17 }

# Serif

A small decorative line or flourish

# Sans serif

Plain strokes. Sans serif do not have flourishes at the end

# Display

Bold and large size fonts

# Handwriting

As the term suggests, look like written by hand

# Monospace

characters are equally spaced

Up to this point you have some decent knowledge of styling your website. It would be great if you learn about a layout system now.

Flex and Grid

Grid is little bit tough to master but flex isn't

{ 12 / 17 }

You don't even need to learn about Flex if you know Grid layout. Because you can achieve the Flex layout using Grid layout.

Moving forward, there are million of device on which user will see your website. In order to deliver best experience, you need to make your website responsive. That is also handled by CSS.

{ 14 / 17 }

Few days back I wrote a thread on responsive web design. Give it read and learn about responsiveness in almost no time. This is a visual guide as well
