React got that name for a reason. It's a component-based JavaScript library that renders smartly and can seriously simplify your work.

This course is for [React](#) newbies and anyone looking to build a solid foundation. It's designed to teach you everything you need to start building web applications in React right away.

Each lesson in this 28-part course is a single `index.html` file. This keeps your focus on learning React, with no distractions. We'll start with a blank file and add more complexity as we go along, wrapping the course with a lesson on how to move into a more production-ready development environment—and even deploy your app to a great service like [Netlify](#).

You'll build a solid understanding so when you come across [JavaScript](#) challenges down the road, you'll know how to...react.
