**A thread on how to look at a day**

**#Basics**

Basically planets are moving around the Sun

The angle they make between them is called a aspect

Here Sun and moon are 90° apart

They are making a square aspect,

and so on

In financial astrology

The major aspects are

0° Conjunction

30° semisextile

45° semisquare

60° sextile

90° square

120° trine

180° opposite

Here

Conj and Opposition are trend changing aspects

Mostly when Sun Moon are Conj(Amavasya/ New Moon next day) or at Opposition(Purnima/Full Moon) we see trend changes around this dates

See #sensex recently

It may not happen exactly on same +- 3 days is the range mostly

Trine  $120^\circ$  is considered a positive aspect

Similar sextile and semisextile are also considered positive

The hard aspect is Square  $90^\circ$  and is associated with bearishness

These things happen mostly

But it needs to be seen as trend change event rather than some hard rules

Now lets see the planets

Mercury Venus Jupiter are considered positive or bulls planets

Whereas Sun Mars Saturn Rahu(North Node) are considered negative or bears planets

This happens mostly not always

So when some aspect is formed by these planets one should look for reversals

Now lets see the movement of planets around the sun

Earth completes one circle around the sun in 365 days or 12 months

This motion of  $360^\circ$  rotation is divided into 12 signs from Aries to Pisces each of  $30^\circ$

So earth moves in 1 sign(rashi) for around 30 days

Similarly other planets cycles are

Mercury 88 days

Venus 225 days

Earth 365 days

Mars 1.88 years

Jupiter 11.88 years

Saturn 29.42 years  
Uranus 83.75 years  
Neptune 163.74 years  
Pluto 245.33 years

#### Note

Jupiter stays in one sign  
for approximately 1 year  
and Saturn for approximately 2.5 years  
And Uranus for approximately 7 years  
This is not constant because of elliptical nature of planets rotation around the sun  
Hence approximately

The normal motion of the planets is direct - from the point of view of someone on earth, But because the earth is not the center of the solar system, there are times when the planets appear to change direction and reverse themselves. This is backward (retrograde) motion

So planets have two motions  
Direct and Retrograde  
The Energy of a planets gets amplified during #Retrograde motion

Now look at the planeta and their associated signs

Sun > Leo  
Moon > Cancer  
Mercury > Gemini & Virgo  
Venus > Taurus & Libra  
Mars > Aries & Scorpio  
Jupiter > Sagittarius  
Saturn > Capricorn  
Uranus > Aquarius  
Neptune > Pisces  
Pluto > Scorpio

The 12 signs(Rashis) are

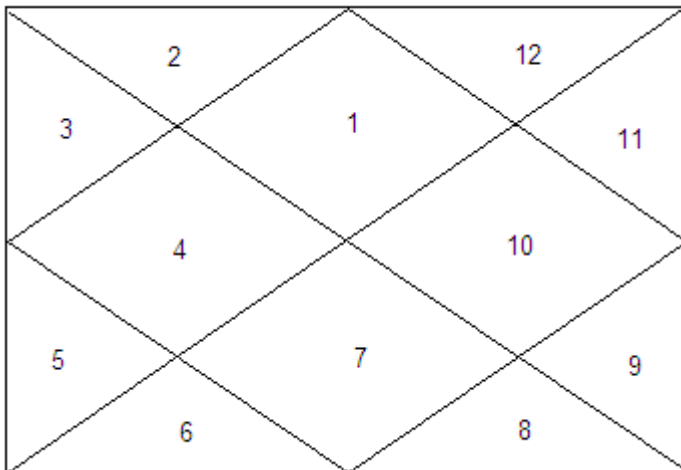

1 Aries Fire(1■■■) Cardinal  
2 Taurus Earth(2■■■) Fixed

- 3 Gemini Air(3■■■) Mutable
- 4 Cancer Water(4■■■) C
- 5 Leo 1■■■ F
- 6 Virgo 2■■■ M
- 7 Libra 3■■■ C
- 8 Scorpio 4■■■ F
- 9 Sagittarius 1■■■ M
- 10 Capricorn 2■■■ C
- 11 Aquarius 3■■■ F
- 12 Pisces 4■■■ M

Lets see the strength of the houses

Strength in descending order

- 1
- 10
- 7
- 4
- 11
- 8
- 9
- 12
- 2
- 3
- 5
- 6

Planets are strong in the middle of a sign

A sign is of 30°

So it is strong at 15° in a sign(rashi)

And If a planet is exalted then the strength triples whether positive or neither of the planet

And if planet is debilitated then the strength reduces by half

Planets are exalted at \_° in sign

Sun is exalted @ 19° of Aries

Moon 3° Taurus

Mercury 15° Virgo

Venus 27° Pisces

Mars 28° Capricorn

Jupiter 15° Cancer

Saturn 25° Libra

Planets are Debilitated at the opposite side of the exaltation

i.e. 180° apart

These calculations may vary from person to person by some degrees

But are always in those signs only
