Recently a Query was raised by someone on some platform that why can't Bhagwan Shiv be spotted by satellite, if Hindus claimed him to be on Kailash Parbat.

The reply was beautifully explained by an American, F. Shant, PhD from St. Louis University, 30+ years Practicing..

..Practical Hindu Spirituality.He said,"Human eyes and recording equipment can't record what dogs and cats see at night.Then came infrared cameras.We realized shortcomings of our eyes. Microscope started seeing cells. Scientists went on to build bigger & bigger microscopes,...

..electron microscopes made us realize that smallest part of independent existence, has many parts. Then came CAT scans, PET scans, MRIs, we started seeing what nobody knew existed.

When scientists thought we knew everything, came dark matter.

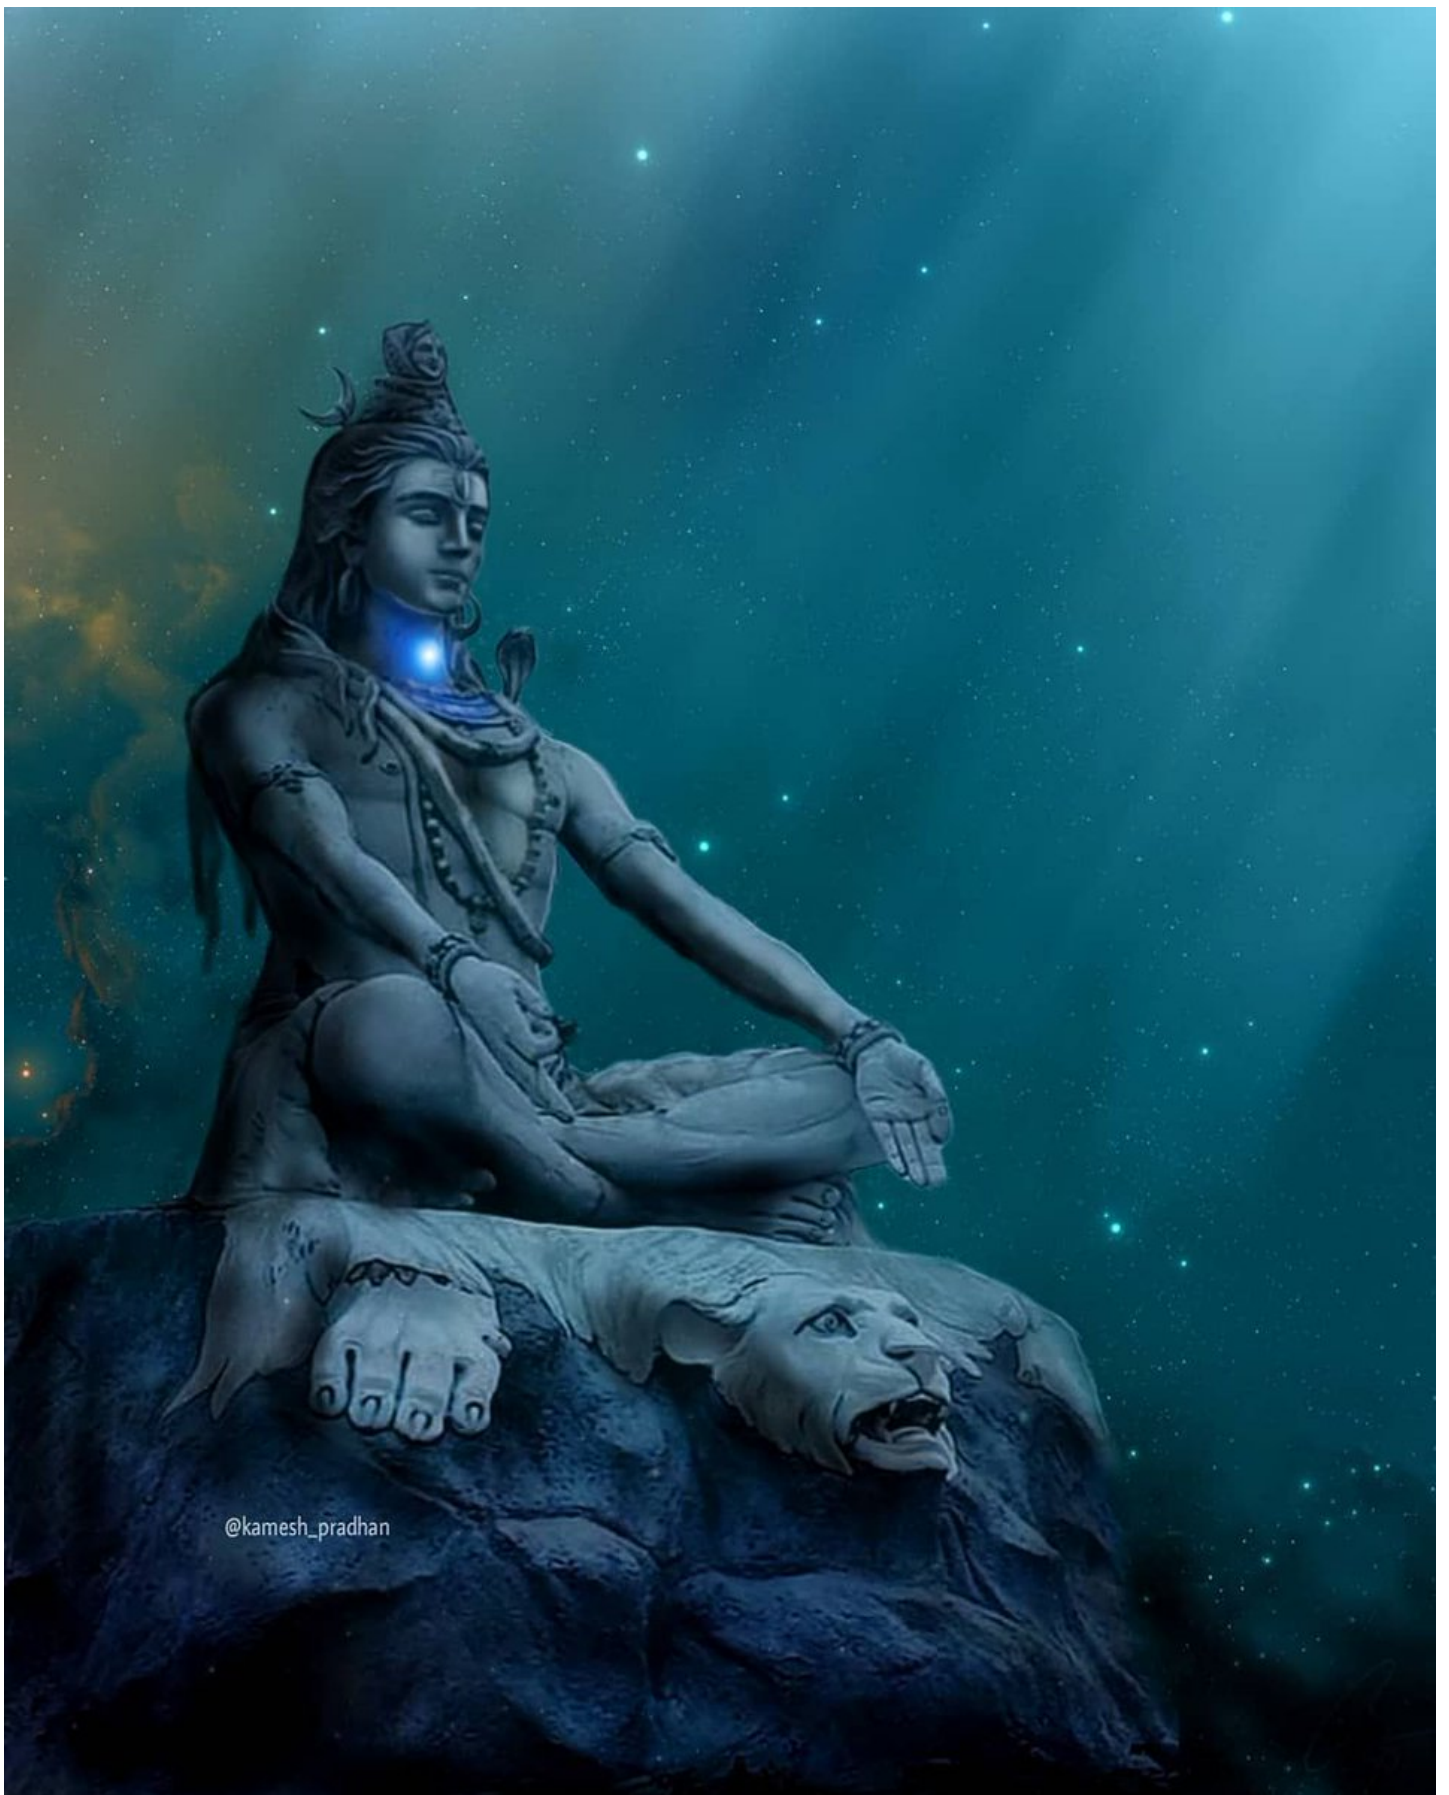

Never seen or heard of earlier but now believed to occupy about 75% of the space. Again we came to know that we don't know anything.

As a trained scientist I can share the real secret of why.

For seeing God Shiva on that mountain we need different eyes.

Once we have those then he can be seen not just on Kailash but everywhere and anywhere, because that mountain is not the only place he is, he is everywhere.

This separate set of eyes required are those of mind & heart and those of dedication & surrender.

Once that comes, rest all falls in place".

I must say what a befitting reply that makes complete sense.
