Albert Einstein scribbled on the chalkboard one day.

09 = 9 x 1

18 = 9 x 2

27 = 9 x 3

36 = 9 x 4

45 = 9 x 5

54 = 9 x 6

63 = 9 x 7

72 = 9 x 8

81 = 9 × 9

91 = 9 x 10

There was an outburst of laughter in the hall because Albert Einstein was incorrect; the right answer for 9 times 10 is 90, and all of his pupils mocked him.

As a result, Albert Einstein waited for everyone to quiet down before saying:

“No one applauded me even though I had correctly evaluated the nine questions; nevertheless, when I just missed one question, everyone started laughing; this implies that even if a person is extremely successful, society will notice and relish his tiniest mistake.

So don't let criticism derail your ambitions; the only person who never makes a mistake is the one who doesn't try."
