VWAP - One of the most trusted indicator is volume-weighted average price (VWAP). Simply average the price and volume and indicate a price point of the trading of day. Works in #intraday Only.

How to use #vwap -

First 15 minutes - #ASIANPAINT on a 5 min TF explained in pic below

- Entry based on #VWAP in morning gives max gains.
- In a bull chart it won't touch VWAP again in day.

#VWAP (how to short) in Mid of Session -

How to short using VWAP - Explained in #mindtree and #HCLTech 5 min TF

Always wait for retest and confirmation before taking short - keep SL above VWAP

How VWAP helps identifying Bull and Bear Run in continuation

Explained with this #HCLTech and #TataSteel Chart

When you have a hint of breakout and that may continue .. how to confirm with #VWAP ?

How to Buy in Mid of a session on bounce from VWAP

1) Any #Stock gaining in day but due to fall in market comes down to VWAP - High chances that it will bounce - one can enter long when bounce is confirmed (low is higher than vwap)

Explained in this #Techm Chart.

Long or Short near #VWAP with small SL always have favorable Risk Reward Ratio.

Because SL is always small and to be taken at other side of VWAP.

All Based on my personal experience.
