**Fauci told in February 2020 by woman that China underreported Wuhan Virus spread and death**

**She said her source is a Chinese exchange student (name redacted■ in the email), who was in contact with a nurse in Harbin, China.**

**https://t.co/c8o4snJ6pV via @MailOnline**

Harbin is in the province of Heilongjiang, close to the border with Russia.

On Dec 10, 2019, the health commission of Heilongjiang confirmed that 13 students at the Harbin Veterinary Research Institute also had the infection.

https://t.co/zyYXK2Psv9

In 2018, China launched its first biosafety level-4 lab in Harbin.

The lab is being operated by the Harbin Veterinary Research Institute, under the Chinese Academy of Agriculture Science.

The lab's official address is in the Nangang district.

# China launches high-level biosafety lab

Source: Xinhua | 2018-08-08 00:19:31 |

Xinhuanet App 炫闻

HARBIN, Aug. 7 (Xinhua) -- China on Tuesday put into operation a high-level biosafety lab in Harbin, capital of the northeastern Heilongjiang Province.

China's first biosafety level-4 lab (BSL-4) for large animals became operational after being accredited by the China National Accreditation Service for Conformity Assessment.

Then after looking at dozens of Harbin maps, finally this one lists another location of the Harbin Veterinary Research Institute.

It's in Harbin's Pingfang district.

Heilongjiang province, formerly known as Manchuria during WW2, Pingfang was where Japan's Unit 731 located

Harbin Veterinary Research Inst. was created in 1948, 3 years after Russia invaded Manchuria, then gave it to China.

In 1977, China covered up the spread of H1N1 which was leaked from a Chinese lab ■, brought to an end any cooperation with Russia

# Harbin Veterinary Research Institute

**Harbin Veterinary Research Institute** (HVRI) is a Chinese biological research institute located in Harbin, China. It is under the supervision of the Chinese Academy of Agricultural Sciences (CAAS).

HVRI was created in 1948 and is the first veterinary medicine research institute in China.

In 2013 the HVRI has come to the public attention due to the controversies surrounding its research on H5N1 and H1N1 viruses.[1][2]

In 2018, the Institute put the country's second biosafety level-4 (BSL-4) lab, and the first for large animals, into operation.[3]

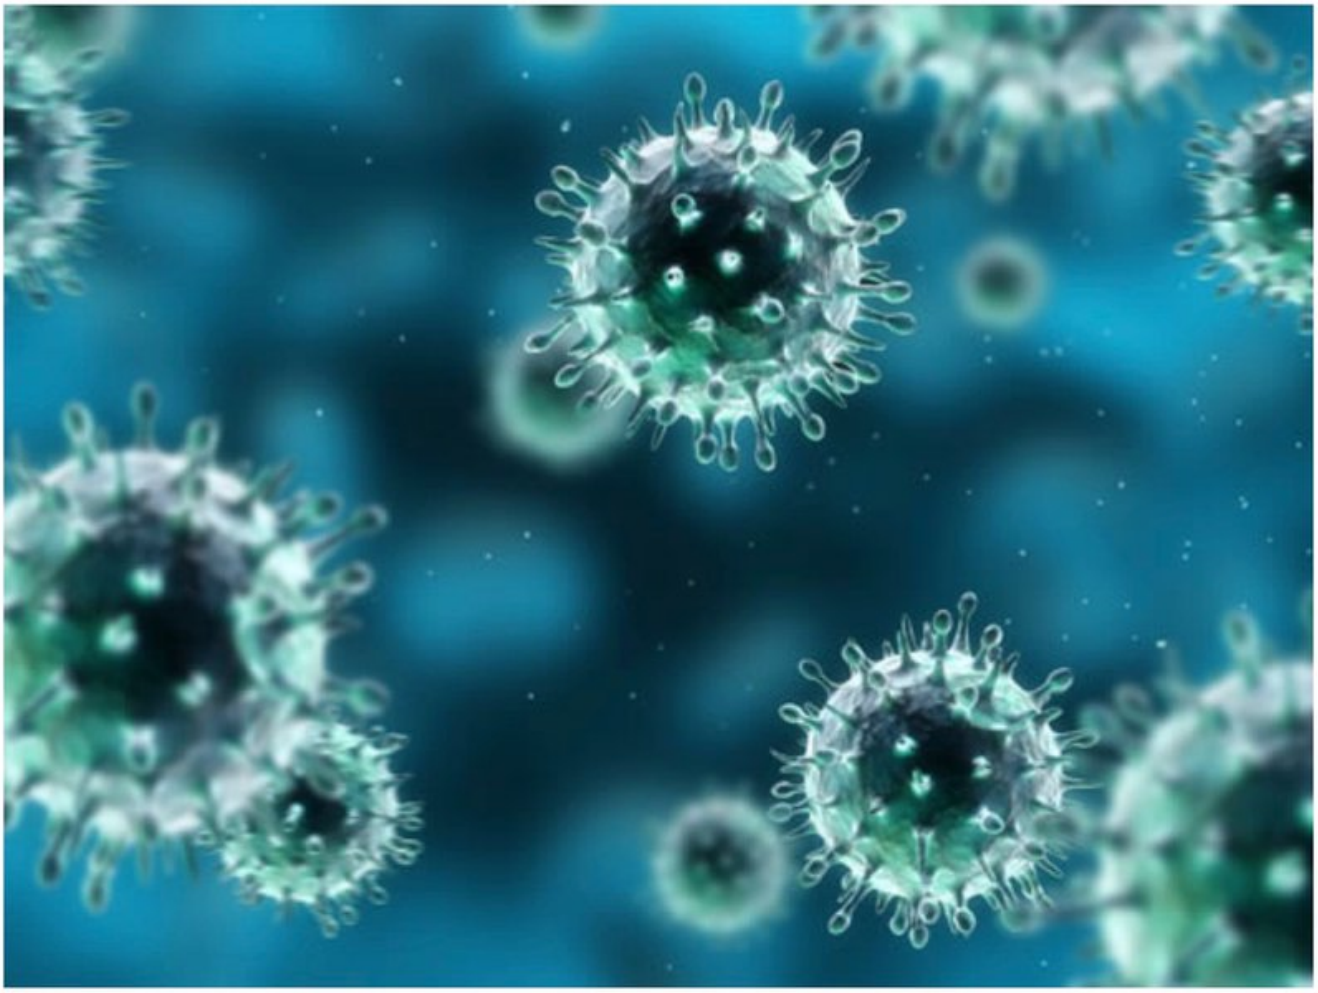

In 2014, NIH awarded Emory University and its subcontractor Harbin Veterinary Research Inst. $3.6M, with potential funding up to a total of $26.7M.

Haven't some Chinese researchers been fired by Emory over espionage? ■

# NIH funds center for flu research, surveillance

## National influenza centers integrate research to improve pandemic preparedness

Woodruff Health Sciences Center | April 10, 2014

The Emory-UGA CEIRS, including partners at the University of Georgia and Harbin Veterinary Research Institute in China, is one of five national centers that integrate research to improve pandemic preparedness.

Gain of Function:

Critics of a 2013 group study led by Hualan Chen, director of the Harbin Veterinary Research Inst. lab calling their experiment on H1N1 & H5N1 "unsafe", "appallingly irresponsible" & also raising concerns about the biosafety of the lab itself.

**TITLE & FULL NAME**: Dr. CHEN Hualan, Professor **AREAS OF EXPERTISE**: Virology, Vaccinology NO. **YEARS OF EXPERIENCE**: 20 years

CHEN Hualan is a virologist whose research focus is the study of influenza and the development of vaccines against this virus. She has established several platforms for avian influenza vaccine development, and over 140 billion doses of the vaccines developed by her have been used to control H5N1 influenza in poultry in China and other countries. She also performs extensive basic research to understand the evolution and the genetic basis of the virulence and host range of avian influenza viruses, and has published over 100 papers in international peer-reviewed journals, including Science. She was selected as one of “the 10 people that mattered in 2013” by the prominent interdisciplinary scientific journal Nature.

Li Chengjun, virologist at the Harbin Veterinary Research Inst.

Li is also Assistant Scientist at the Dept of Pathobiological Sciences of University of Wisconsin. ■

**TITLE & FULL NAME:** Dr. LI Chengjun, Professor
**AREAS OF EXPERTISE:** Virology
**NO. YEARS OF EXPERIENCE**: 15 years

LI Chengjun is a virologist whose research focus is to understand the mechanisms of pathogenesis, variation, replication regulation and anti-viral immunity of avian influenza viruses. He is also interested in the epidemiology of avian influenza viruses and the development of avian influenza vaccines. He has published over 30 papers in international peer-reviewed journals, such as PNAS, Trends in Biotechnology and Journal of Virology.

Jian Ma, associate professor at Harbin Veterinary Research Inst., research associate at the University of Pennsylvania, where Biden SOS Tony Blinken helped raise over $100,000,000 from China.

Is this dude a Thousand Talents recruit?
