

Twitter Thread by Kacie Ahmed

Kacie Ahmed

@Haezurath

3 months ago, I wrote my first smart contract

Today, I won the biggest web3 hackathon in Toronto and joined @musicoins as a blockchain developer ■

Here is my updated web3 developer roadmap

A mega thread ■

1. What is Web 3.0?

Web3 is the next jump in how people use the internet.

- Web1 was the "read only" era. ■
- Web2 was the social media revolution. ■

And Web3 is decentralization. ■■

2. What is the metaverse?

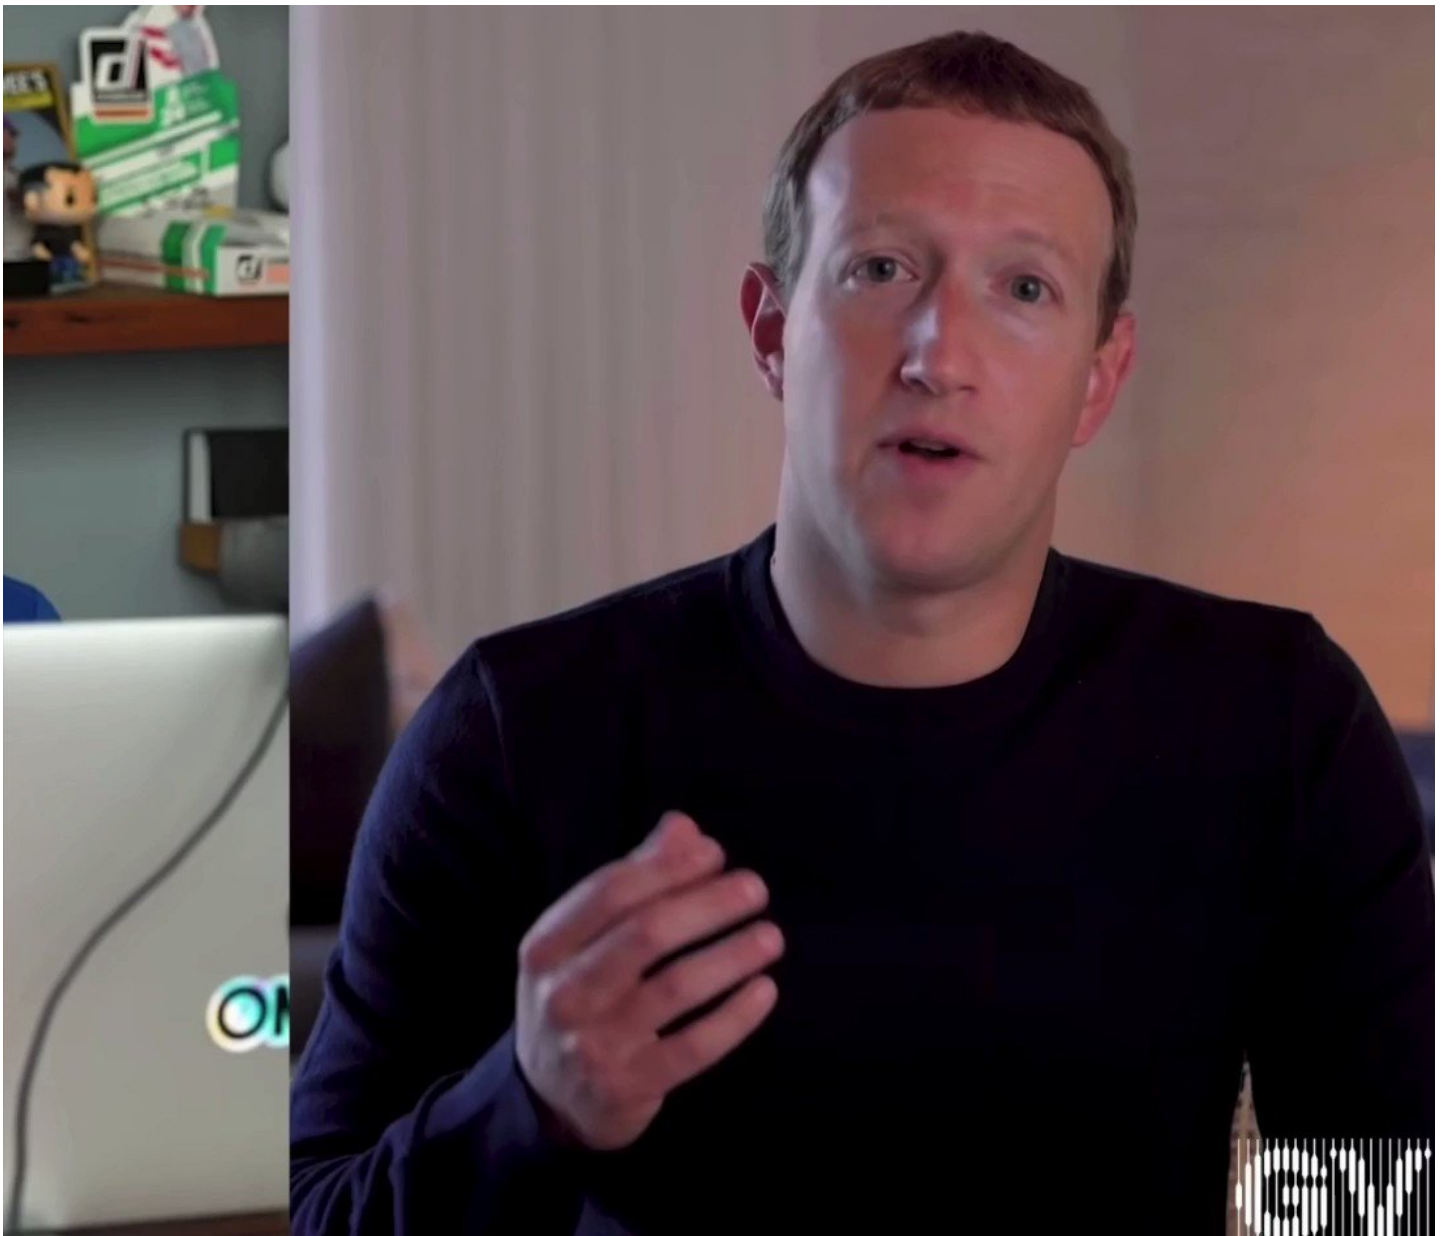

Metaverse refers to the virtual decentralized world and community ■.

Decentraland = metaverse. ■

Somnium Space = metaverse ■

NFT spaces = metaverse ■

Here are Mark Zuckerberg thoughts on the Metaverse ■

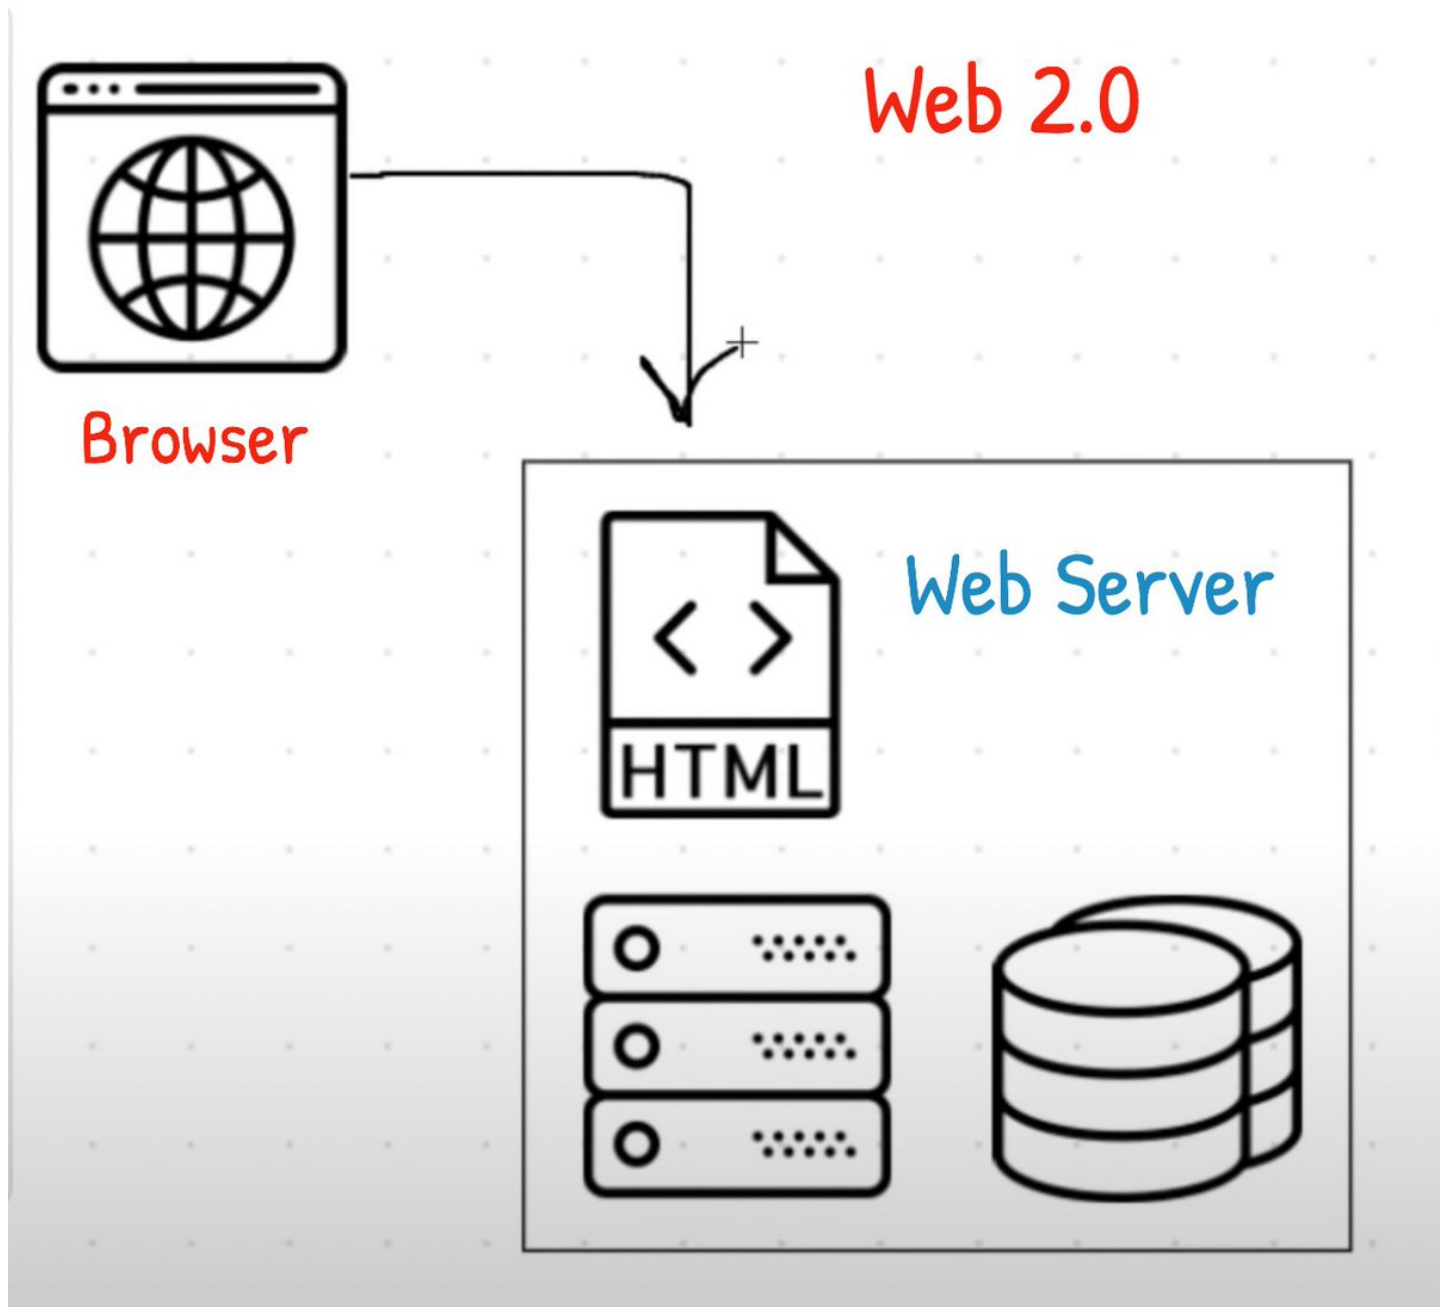

3. How does web3 work?

Currently, when you connect to a website, you are connecting your web browser to a webserver.

All of the code you write is stored on that web server.

With blockchain... it's different. Everything is stored on the blockchain instead.

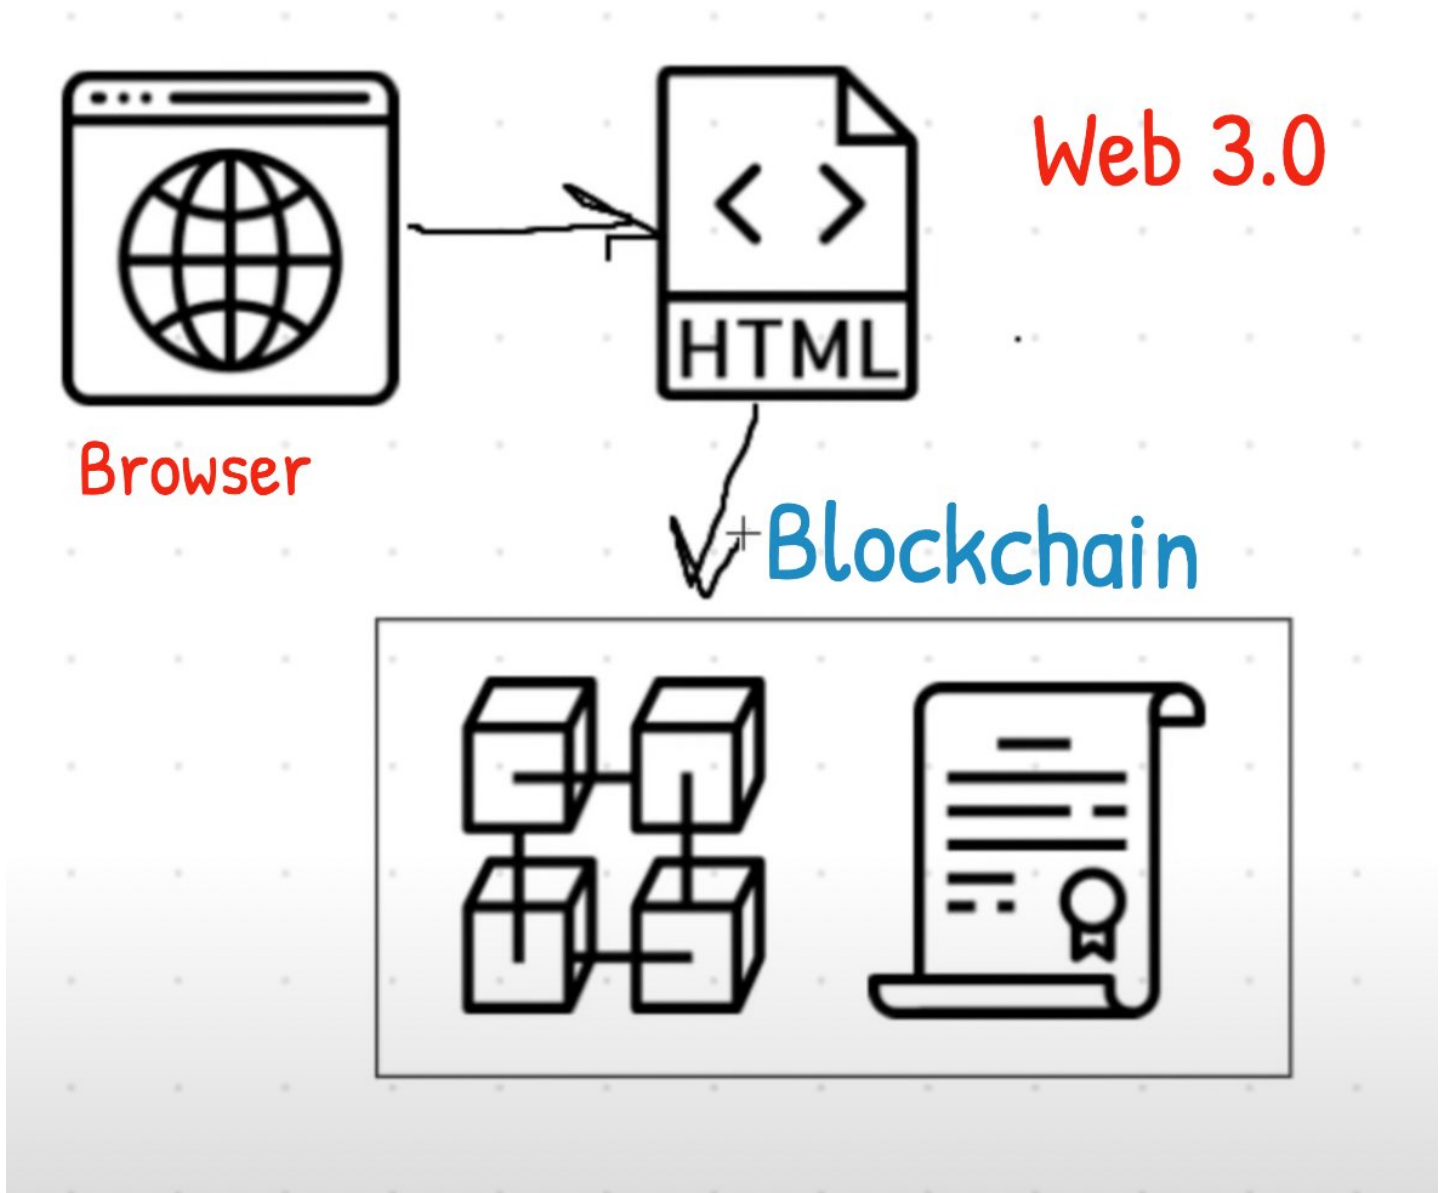

4. The challenge of web3

So the challenge of getting into web3 is figuring out how to work with the blockchain.

For example, let's say you make a Timer app. You already know how to make & host it normally.

Now you have to learn how to make & host it with Blockchain.

5. Why get into web3 (1/2)?

I think web3 is a great opportunity for those of us who are ambitious.

Other fields in tech are tight and established.

Web3 is a vast frontier.

Because it is new, there is a greater opportunity to rise to the top and become a thought leader.

5. Why get into web3? (2/2)

Imagine how hard it would be to get in a room with Mark Zuckerberg.

In web3, the giants of the space are still accessible. Some of them sit in Twitter Spaces.

This will change in the next decade. Now is the time to make a name for yourself.

6. Roadmap

The rest of this thread will be dedicated to my updated roadmap.

7. Know what you are getting yourself into

Before worrying about languages and courses, I would watch an introductory video on Blockchain development.

This video by Gregory was the first web3 video I watched.

It put me on the right path ■
