4. WTF?

Yoichi Shimatsu now brazenly accuses one of Japan's top microbiologists, Yoshihiro Kawaoka, of engineering SARS-COV-2 by inserting "HIV force multipliers", similar to his earlier work at University of Wisconsin on Influenza and HIV back in 2011.

<https://t.co/ZhhZWnuKow>

"I learned of Kawaoka's reckless violations of science ethics from Robert Finnegan, former editor of Jakarta Post, who was tracking theft of MERS & other virus samples from NAMRU-2 by a senior local lab technician who personally smuggled the dangerous materials to Wisconsin Uni"

"a decade ago at his lab in Wisconsin with generous funding from Japanese state institutions, Kawaoka was developing an "unstoppable flu", secretly derived from an illegal exhumation of the Arctic frozen corpse of an Alaskan native who died in the 1918-19 influenza pandemic"

Exhibit B is a 2011 research paper by Y. Kawaoka et al at his animal virology lab at University of Wisconsin:

"HIV reverse-binding protein is essential for influenza A virus replication & promotes genome-trafficking in late-stage infection"

<https://t.co/KNnU8wnj7z>

Favourite quote:

"The lawless pharmaceuticals, insane vaccinators & rogue microbiologists must be stopped in their tracks or humanity will face its final solution.

High-ranking sponsors in government & major corporations also should be indicted & appropriately punished by judges"

"Kawaoka et al reported that attaching a quartet of HIV reverse-binding proteins (HRB) to influenza virus vastly expedited production rate of new virions & efficiency of replication. Successful grafting of HIV proteins onto influenza viruses enabled next steps in his research"

...to craft an influenza virus as unstoppable as the Spanish flu of 1918-19.

Kawaoka boasted "This is the first study to implicate cytoplasmic [membrane] trafficking strategy for the genomes of these two viruses. (Due to their difference in the sorting process)"
