#Aryabhata is the first such teacher who does not come in the category of Bhagwan or Rishi, but at the same time his respect is the same.

At present, many types of astrology systems are prevalent in India - Solar system, Brahma system, Vedic system.

When infinity describes by infinity (Aryabhata)! pic.twitter.com/jgXPJX4bYQ

But, one is also popular by the name of Aryabhata - 'Arya Siddhanta System'. In this way, even after being the first human teacher, he is remembered with respect along with the 'Devtas' and sages.

Aryabhata was the first to try to explain that the reason for the existence...

of day and night is the rotation of the earth on its axis. Modern science has detected two types of motions of the earth.

First it rotates on its own axis and secondly it revolves around the Sun. Aryabhata believes only the first, not the second.

But it is true that for the first time in reese India, he had accepted the rotation of the earth and tried to fix the day accordingly.

He was brilliant. ■■■■â
