Notes: _____

S M T W T F S

Mark private Access Q&A session Notes.

Making a Low, Bottoming out, Most important *
Stocks move properly.
(Easy \$ environment)
Stocks need to work.

Wait for your strategy otherwise you have no
strategy just addiction.

Gauge the market based on feedback → How your
breakouts are working → How your style stocks are
working. Biggest Returns when market indexes were
flat.

The no. of stocks below 200 / 50 DMA also shows how strong
the current market is

If you missed a breakout you can buy a breakout retest
when the price starts to move up in your direction.

Be focussed on buy criteria. Get aggressive when things
start working really well.

Post trade Analysis is must - keep a list of
all the stocks that have been sold.

**

Overtrading is another trouble - Don't ramp up on
the no. of names when things are not working.
