@Anshi

How to find a stock before it Breaks Out ??

Well, this is a time consuming and complex process, Here is a CHEATSHEET for you ■■■

Follow some Twitter accounts who share their stock lists on weekend like

[@Trading0secrets](#)

[@chartmojo](#)

[@Technicalchart1](#)

[@BakuSarman](#)

and many others..

also don't forget to follow my account [@Anshi](#)

2/5

Now on Weekends, go through all of the stock lists of accounts you follow and Make your watchlist of them...

Remember, Don't remove any stock from your list and keep adding new stocks every weekend,

Do this for a month and you should have watch list of atleast 50 stocks

3/5

Now, after every market close, Go and surf your watchlist, You will find many stocks looking good to which can give a breakout -

Give priority to Stocks that

- Are green in red market
- Near their yearly high
- Trading at their all time high
- Making HH HL pattern

4/5

- Retesting breakout levels
- Breaking their important Moving Averages
- Coming out of long consolidation
- Volume building up..

Make another list of such 5-10 stocks and keep tracking them throughout the day and you will Definitely find 1-2 Breakout stocks.

That's all!!!
