■Easiest Trading Tool I Use

At just 23 years old I have figured out how to make 6 figures+ annually in the stock market

If I had to start from scratch how would I do it again?

This thread walks you through step-by-step the most simple tool I have mastered to make money ■

Step #1: How to Identify Trends?

1.) Trend Patterns

■Bullish Trend: Higher Highs & Higher Lows

■Bearish Trend: Lower Highs & Lower Lows

2.) EMA/SMA Crossover

■Bullish Trend: 9 EMA crossed upwards 21 EMA

■Bearish Trend: 9 EMA crossed downwards 21 EMA

■SMA Trend Strategy: <https://t.co/LWRz1p2v0i>

Trend Patterns Example #1:

■An uptrend is a sequence of higher lows and higher highs made on the chart.

■A downtrend is a sequence of lower highs and lower lows made on the chart.

■If the market's not trending, its consolidating (going "sideways")

Trend Patterns Example #2:

■Prices very rarely move randomly (I'd argue they never do)

■Often mistaken by retail as market manipulation (MM's), when in reality it is just a PATTERN you have failed to recognize, see below

Trend Patterns Example #3:

■This is a clear bull-trend as each high is higher than the previous, and each low / pullback is higher than the previous.

■Many retail get STOPPED out then the trade may move higher even though the trend may still be intact

So how do we play them?

Trend Patterns Trading Example:

■When we identify a clear trend I like to draw a trendline or channel

■When in a bearish trend (lower highs & lower lows) I love to add puts right at the upper trendline resistance to play WITH the trend

■Risk/reward is great I use 10% SL
