There is a powerful Free app for Traders which is much more efficient than many paid apps combined.

Read on to know -

Let's see glimpses of what this app does.

- Unusual Volume Live Scanner:

Stocks showing a sudden influx of volume are scanned here in realtime, both bullish & bearish. Great candidate for further follow up moves.

- Futures OI buildup :

Realtime info of Long & Short buildup along with short covering/ long unwinding in stocks is shown to you. You can customize this to see data from a preferred sector too.

- Market meter :

Gives a live snapshot view of the market movers, both bullish & bearish. Very useful for intraday trend trades.

- Opportunity Finder :

You can give your range for P/E , Market Cap , YTD Returns etc. It'll not just tell the results, with extra details like - 52wk high/low, DMAs, % above avg volume etc.

A great tool to find stocks meeting your criteria.

- Exhaustive watchlist :

You can see stocks from all different Indices as well as sectors here. You can create customized watchlists too.

- Flash data :

You will get quick info about FII/DII activity, EOD reports, IPOs & Block/Bulk deals.

- Workstation :

You can get the watchlist as well as the charts in one screen. You can even toggle between different kinds of charts like OHLC, Renko, Point & Cross etc along with the usual Candlestick charts.

- Multi Charts window :

You can see 4 charts simultaneously along with your watchlist on one side. Same features require a paid subscription in TradingView.

- Announcements :

All the announcements related to stocks are shown to you in this window in real-time.

No need of any News

- Orders :

After watching all the required parameters on one screen, you can place orders from here too quite conveniently.

If you want to get this Free laptop-based App, just Follow me @CnceptualTrader AND Retweet the First tweet of this thread, I will DM you the Download link.

Do try to guess the name of the app in the comment below.
