### [The Future of Luna]

In the community there are many investors that are doubting that \$Luna can make a comeback.

However I can assure you that [@stablekwon](#) is far from being done.

Let's explore how \$LUNA is heading into the future by taking a look what's currently being built!

Before we talk about whats being built next, let's talk about whats not being built.

Here is a screenshot from Do stating that TFL is currently not building UST 2.0. <https://t.co/PHi4F3IU5N>

— Dharma Mind (@Dharma\_Mind) [August 13, 2022](#)

However I am pretty sure, they are going to launch UST 2.0 and I will tell you why at the end of the thread.

Lets first talk about some key information pieces that will bring us to the conclusion that the end goal is UST 2.0.

Luna is implementing new groundbreaking technology in the NFT space. You could say they are inventing NFT 2.0.

One of the most important pieces of NFT 2.0 is the Darwin SDK which will make evolving NFTs possible.

<https://t.co/3xcRutachT>

#1 Darwin SDK

Will allow developers to create evolving NFTs. Users can evolve NFTs by "feeding" them tokens and other NFTs. Plus, use the GPS and gyroscope from a user's phone to create and evolve NFTs.

— John Galt (@lurkaroundfind) August 6, 2022

One application thats already utilizing this feature is @Terragotchi\_nft

<https://t.co/zsadqJLpla>

2/ So how does it all work?

With TerraGotchi, a user will mint a dynamic NFT which visualizes their transaction history. As a user traverses the world of Web3, the NFT will evolve based on their activity. These NFTs can't be transferred and will be limited to one per wallet.

— TerraGotchi (@Terragotchi\_nft) June 10, 2022

However evolving NFTs is only the first technology that is currently being built.

NFTs on Luna will go multi-chain and spread through the #CosmosEcosystem with Andromeda.

<https://t.co/PyTTwQgUs>

We wanted to challenge the entire notion of NFTs. We believe that NFTs can represent so much more than collectables. They can be financial building blocks loaded with practical functionality. How do you see NFTs being used in the future?

— Andromeda Protocol (@AndromedaProt) September 7, 2021

True Onchain-Randomness will be introduced to Luna NFTs with Entropy.

<https://t.co/wgOWAefnuM>

1/ \U0001f4e2 Prop 979 requesting community funding of 50,000 \$LUNA for further development of the Entropy Beacon by @Entropic\_Labs has successfully passed \u2705

The Entropy Beacon is an open-source and community-owned tool for secure random number generation.

<https://t.co/xk0QJbnuab>

— Terra \U0001f30d Powered by LUNA \U0001f315 (@terra\_money) [August 31, 2022](#)

But for what do you need these advanced NFTs?

One such use-case is gaming. A true crypto gaming experience does not require the users to pay thousands of dollars up front.

Think about popular games like League of Legends or Counterstrike.

These games are free, yet there is a huge economy and millions of dollars get transacted.

This new groundbreaking technology that is currently being developed on Luna will make a true crypto gaming experience possible.

There are various other ways to utilize NFT 2.0. Another example is Fountain. We don't know a lot about it yet, but it looks like a dealbreaker to me!

<https://t.co/fLF30Cnwzw>

[@terra\\_money](https://t.co/ePEHFCszIR) leading the NFT 2.0 race [pic.twitter.com/CYjebRbkG5](https://pic.twitter.com/CYjebRbkG5)

— blocbits (@blocbits) [August 12, 2022](#)

Do Kwon (@stablekwon) is creating the building blocks for a true decentralised economy. Similar like he built Chai to support UST.

<https://t.co/UGqJ0Xb4R2>

5/9 That's why with Terra 2, the focus is on the economy, not the stablecoin.

Kwon's plan:

"...build various different types of apps whereby we draw in more human activity from the offline world to the Internet, using the best Web3 technologies we know of."

— John Galt (@lurkaroundfind) [August 20, 2022](#)

Here is what is going to happen:

<https://t.co/8tmO4RUP4H> is creating the infrastructure for advanced application (for example with NFT 2.0)

2.Thousands of Users will be using these applications and slowly but surely a true and sustainable decentralised economy is formed

3.This economy will be the building block and the support to maintain a new \$UST 2.0.

As Do said: A Stablecoin can only work if you have economy to support it.

<https://t.co/lwszSKv3vR>

1/9 According to [@stablekwon](#),

Terra 1.0:

a decentralized economy needs decentralized money

Terra 2.0:

decentralized money needs a decentralized economy

Just semantics? No. This is hugely significant.

Let me explain the new grand vision for Terra. \U0001f9f5\U0001f447

— John Galt (@lurkaroundfind) [August 20, 2022](#)

And besides that Do's banner picture is still showing \$LUNA and \$UST 2.0

SOON New Listings: \$LUNA \$LUN

@terra\_money

Obviously I am biased towards Luna and I do not know if similar technology is being built other chains.

For me Luna is a 3 years + investment and I am just compounding my staking rewards.
