■ Supply & Demand ■■

The key understanding to supply / demand is all about speed.

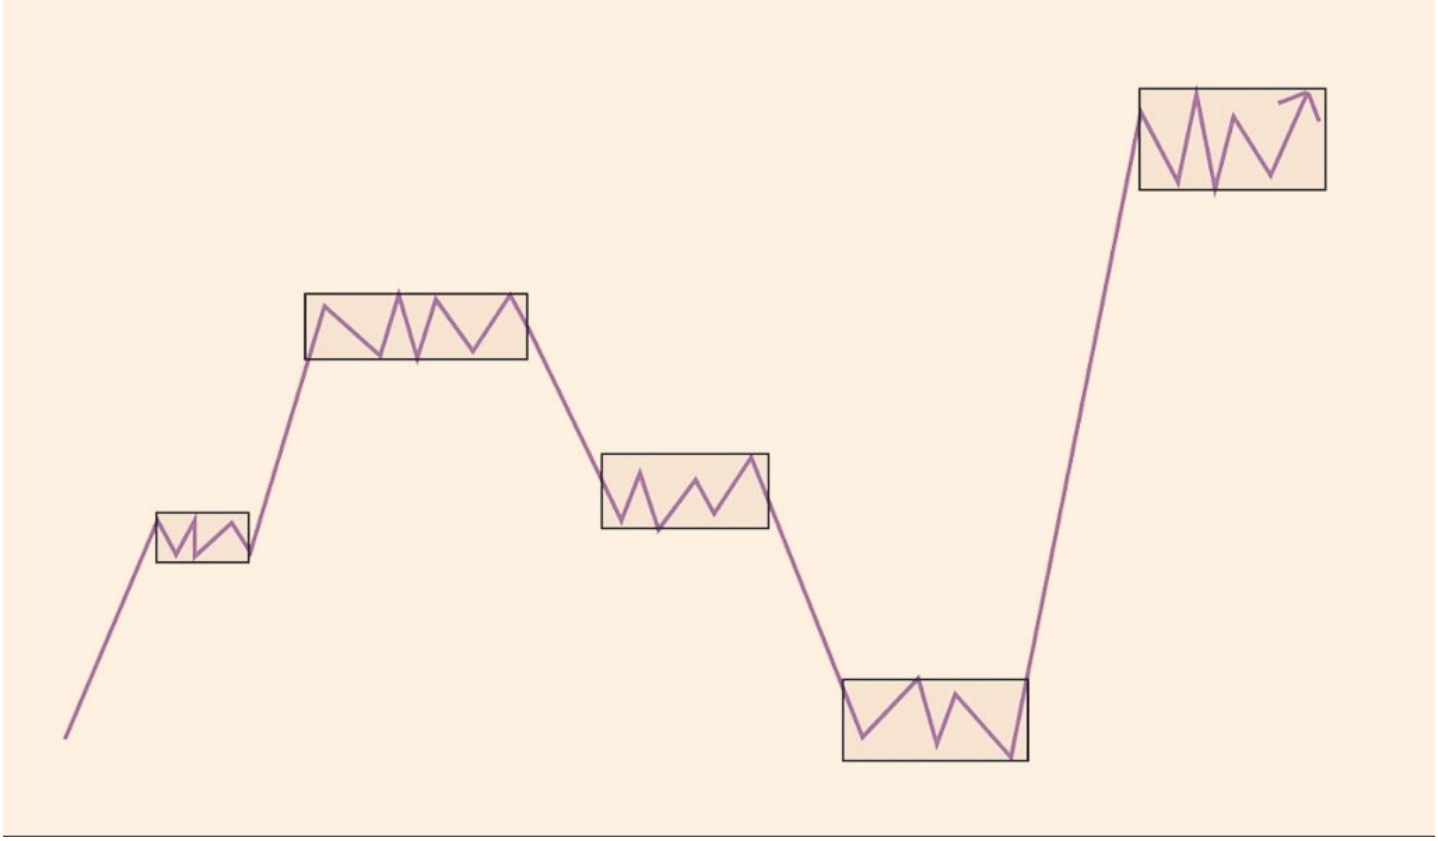

How fast price is moving.

Fast price movement = institutional activity

Slow price movement = chop

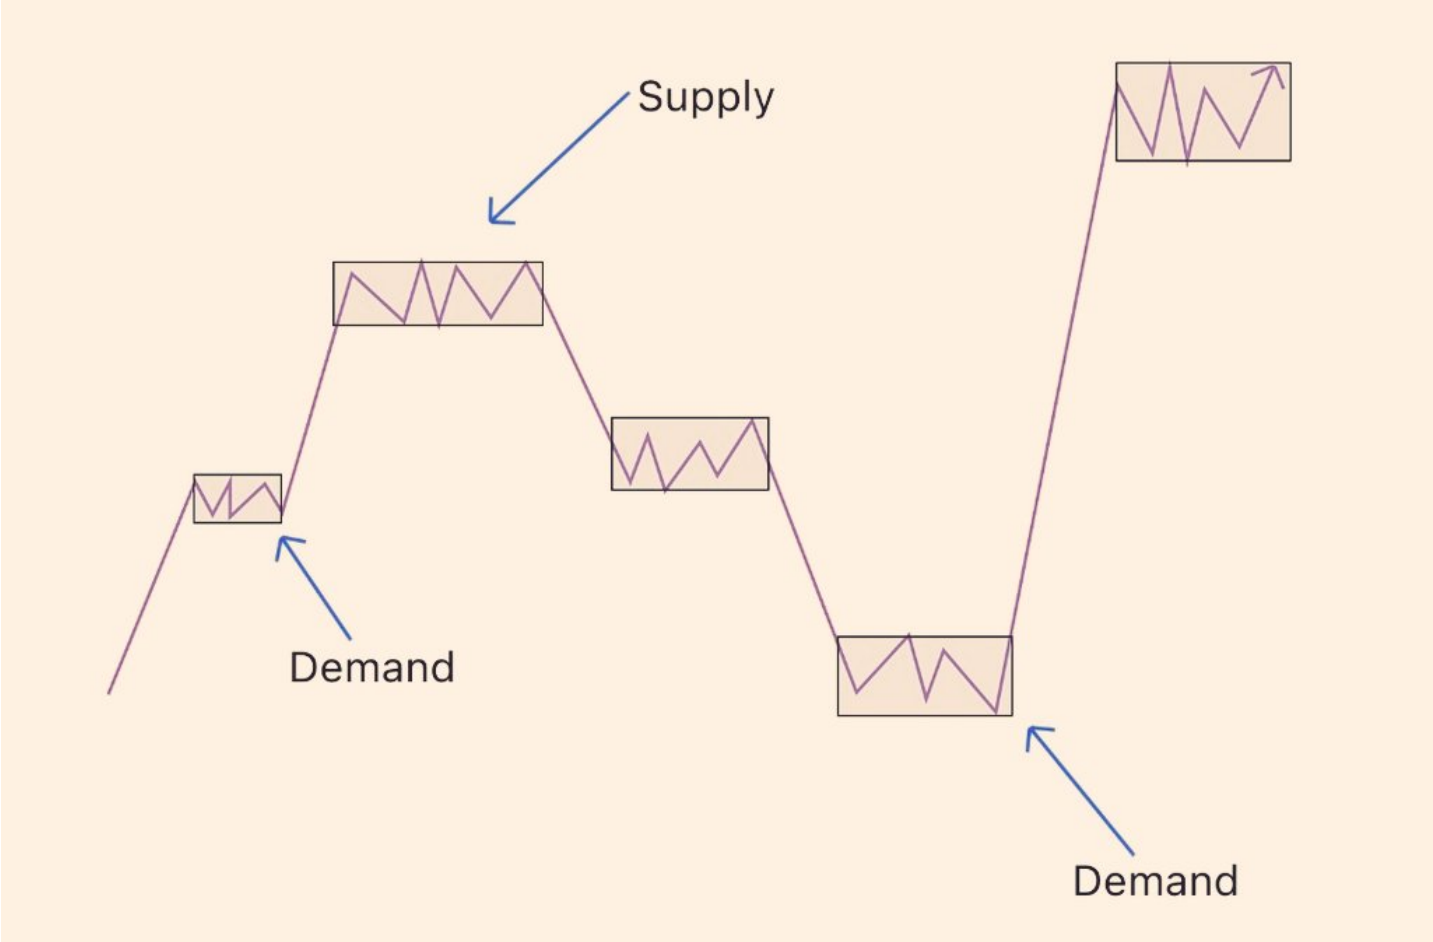

Price is always in 2 phases :::

Contraction (shaded) and Expansion

Contraction phases are when institutions are building positions

A fast move from a contraction phase is how you know where to identify supply & demand

There are 2 kinds of zones

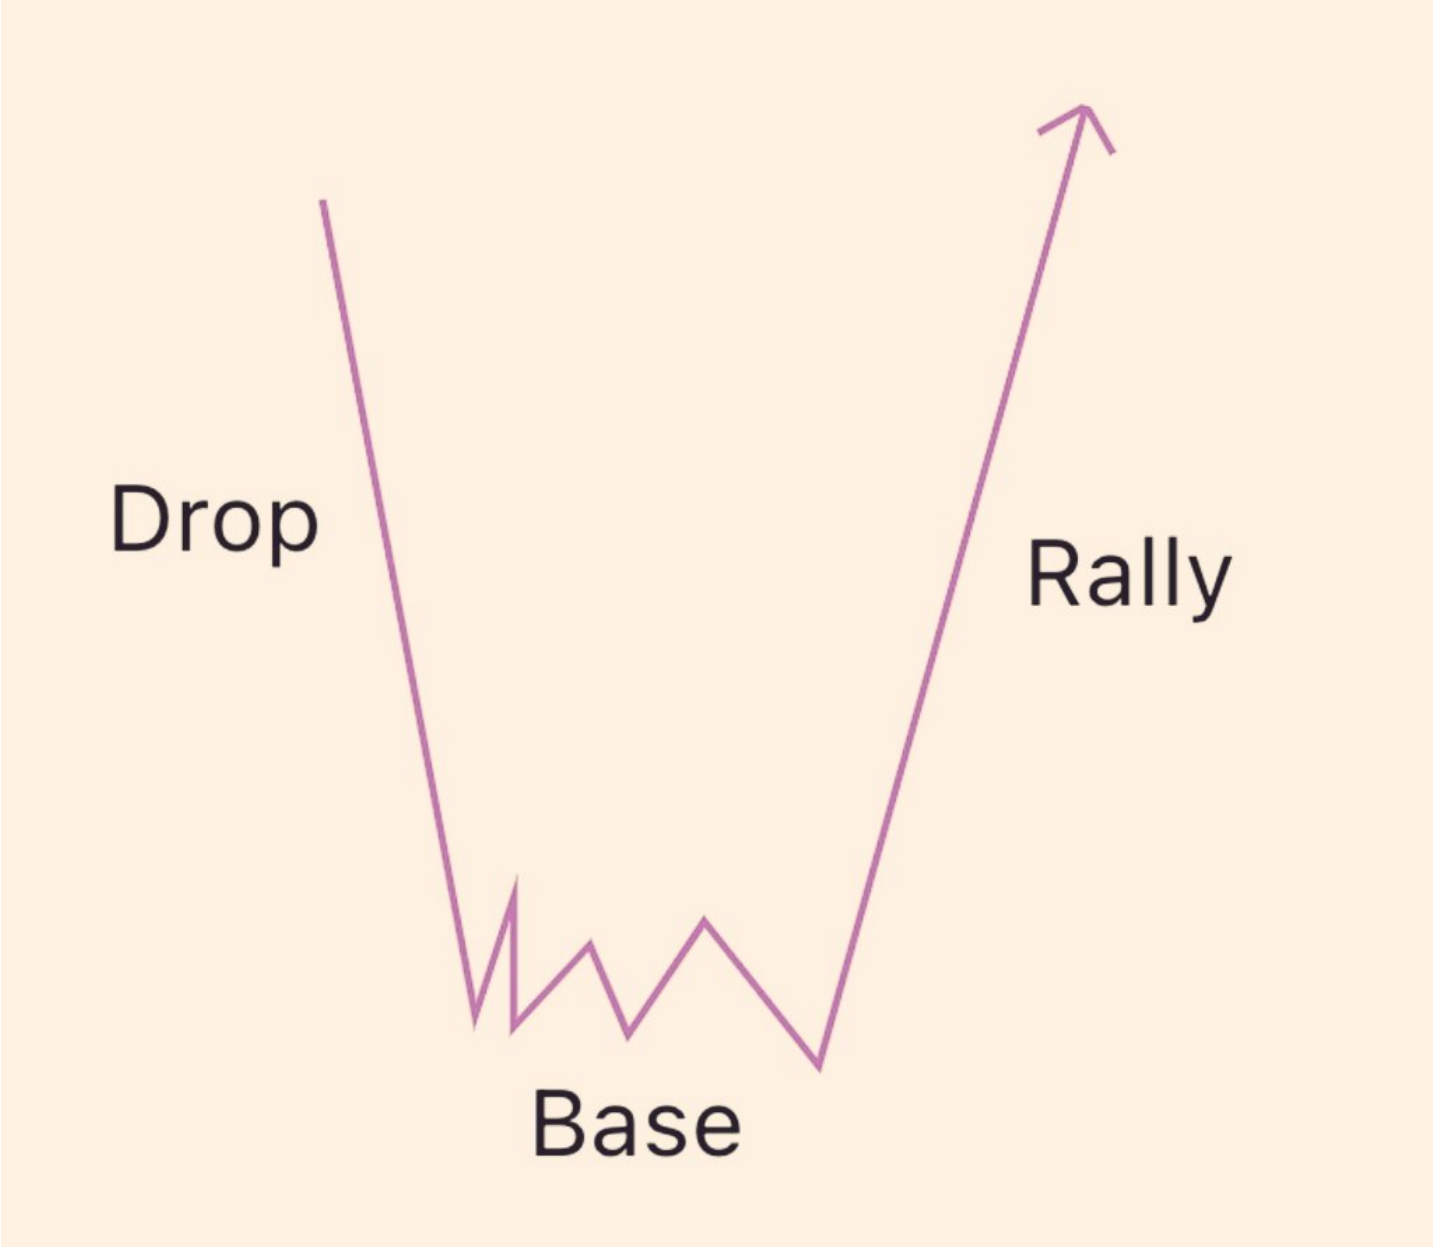

::_Drop base rally

::_Rally base rally

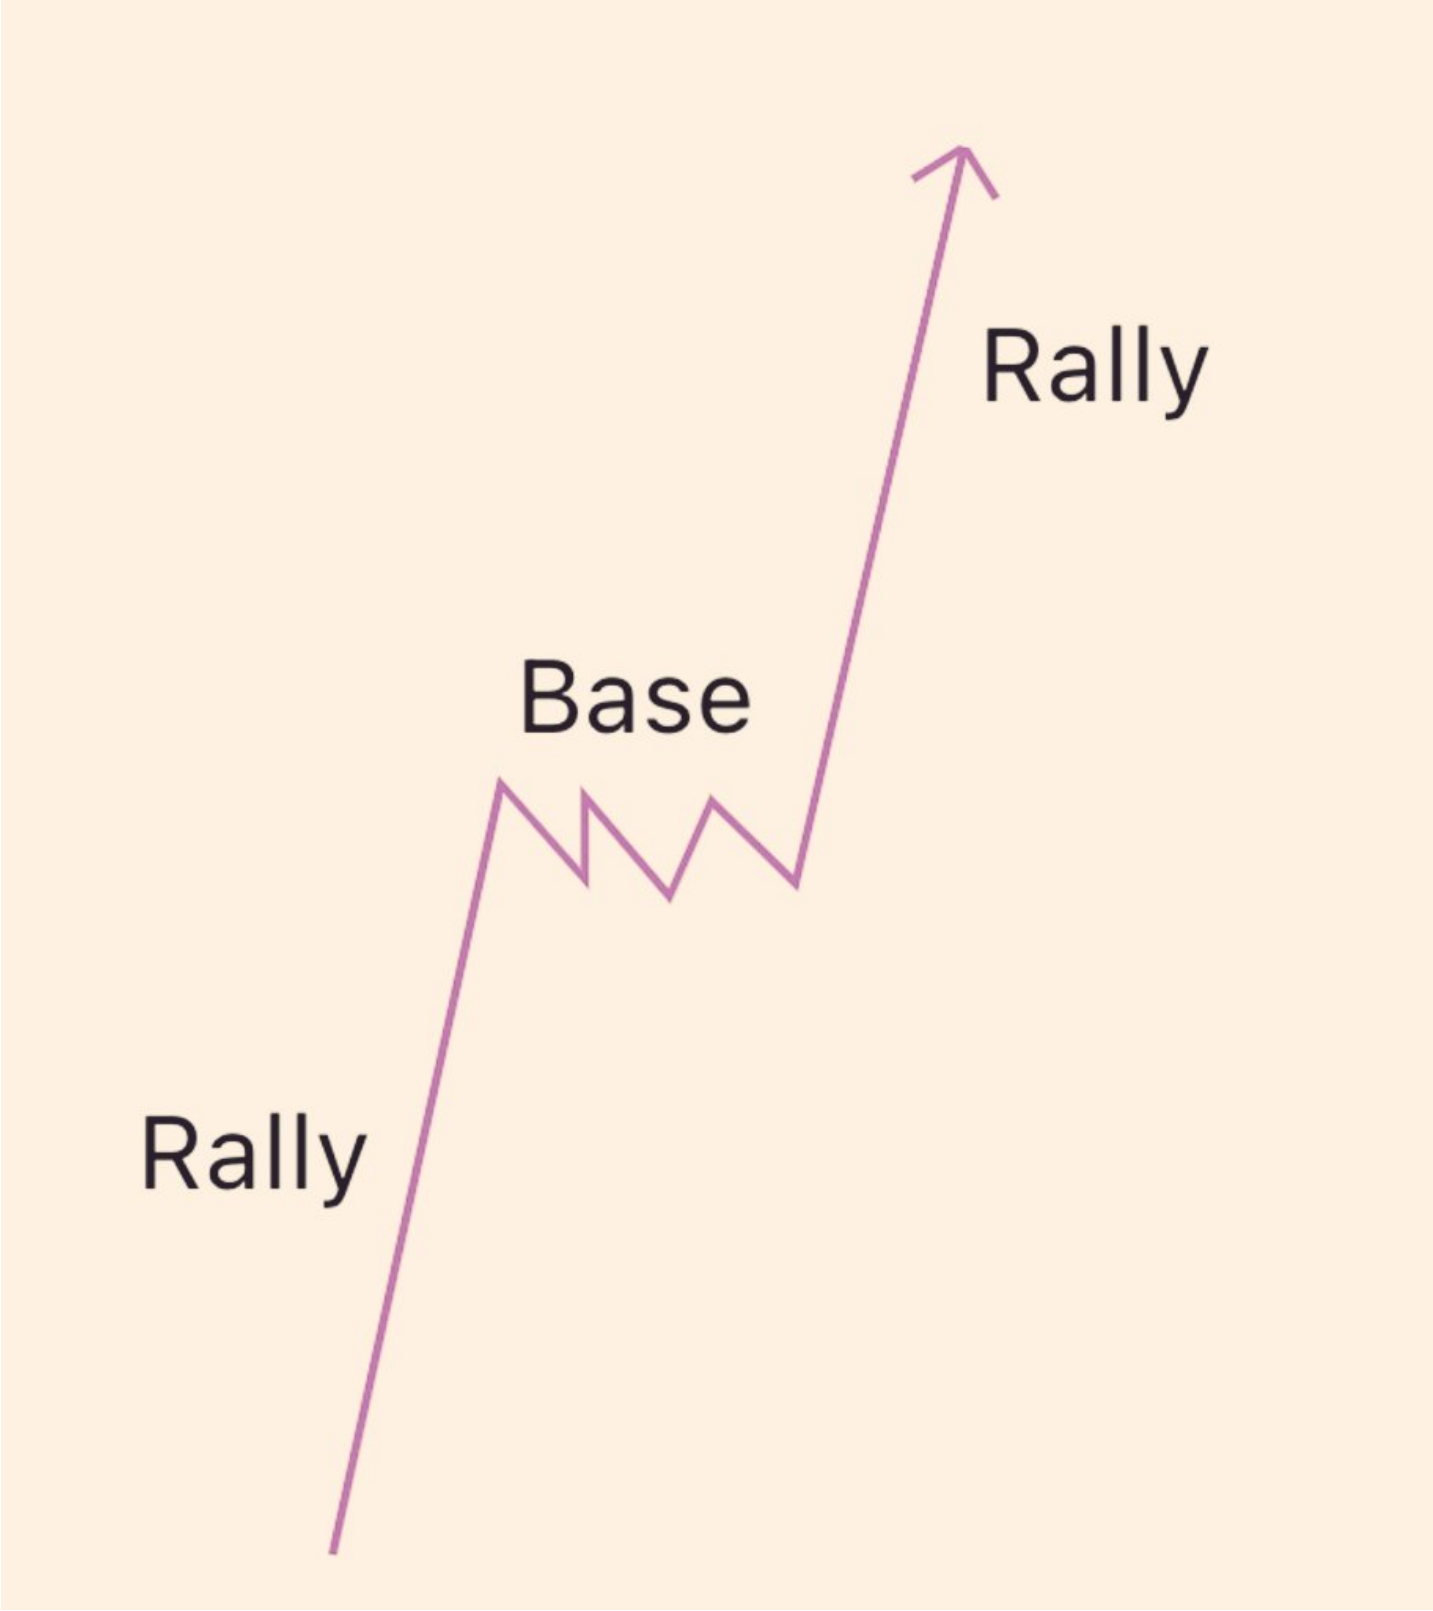

I'll explain both for demand zones

{Its the opposite for supply}

A DBR [drop base rally] zone looks like this ::

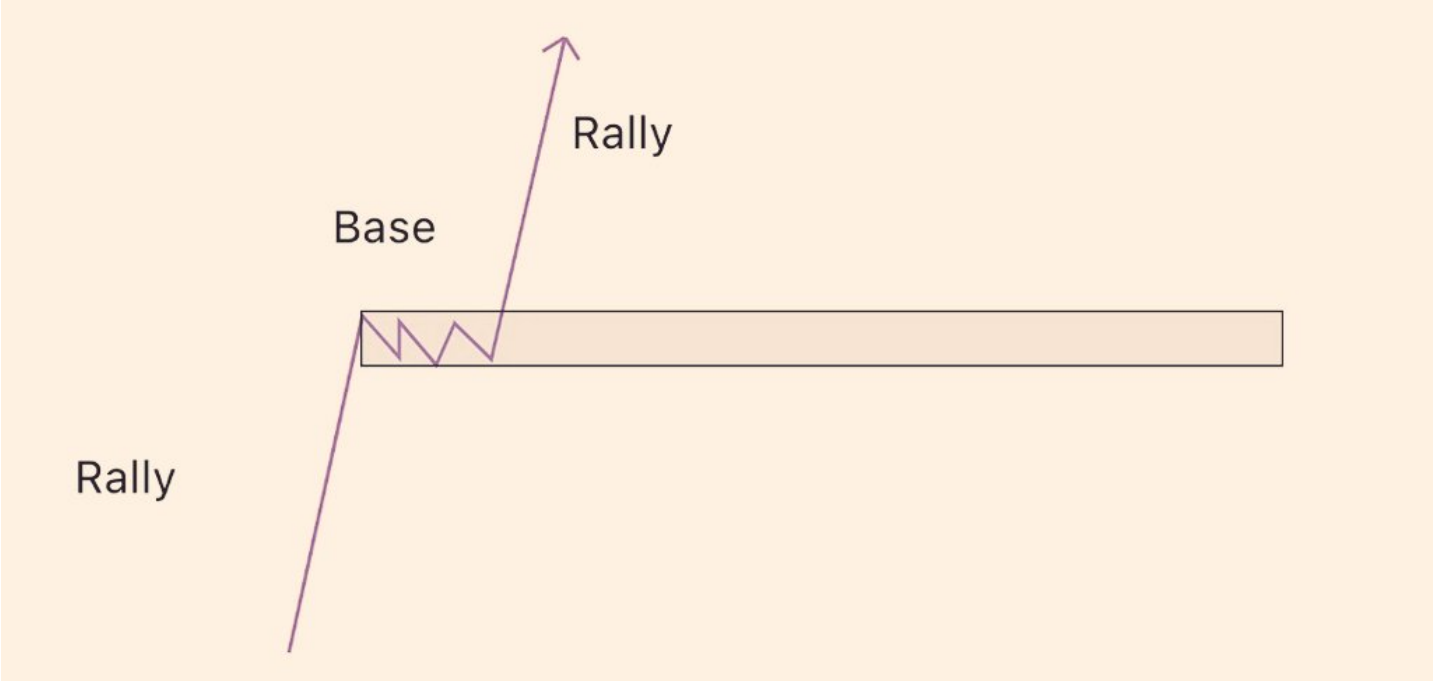

A RBR [rally base rally] zone looks like this ::

These zones are drawn by taking a box from the high/low of the "base"part and extending them

Here's what i mean ::

You trade these zone by buying the pullback to them

Here's what i mean ::
