Top 10 price action (secrets) lessons which I learned after 6 years of experiences.

1■ - When market recover the strongest stocks recover very fast & will ready for new high

Ex -#gael

after correction of #nifty , it fell then again recovered very fast & furious way

2■ - If stock never come to retest it's weekly & monthly breakout zone then the chances of it's 2x is much more.

Ex - #datamatic after BO 5 year never retest BO zone & consolidating near high.

Chances of it's 2x is much more ■

3 ■ If stock is giving BO of all time high or more then 1 year range with high volume then it can give 20/30% return in few weeks.

Ex - #mawana sugar after given 1 year BO of all time high given 22% return in 4 days

4 ■ - If its sector & market both are silent & only few stocks are trying to breakout then the chances of its failure is very high.

Ex - #hindoilexp

In jan /feb trying to BO but market & sector didn't support so failed ■

5■ - If stock is accumulating or standing near it's big resistance or support then it's chances of BO /BD is much more.

Ex - #sapphire food

From past 7 days was standing near major resistance chances of BO is very high....

■Next 5 lessons I already shared in my YouTube channel ■

And that ■ 5 lessons give you different perspective of price action.
