संस्थाप्य मृण्मये पात्रे ताम्रपत्रं सुसंस्कृतम्

Electrical Cell

An Interesting procedure, that gives proof for the usage and preparation of the battery cell is recorded in Agastya Samhita. The following lines illustrate the electrical cell.

The diagram shows a cross-section of an earthen pot. Inside the pot, there are four distinct layers. From top to bottom, they are: a dark grey layer labeled 'Zinc Powder', a light grey layer labeled 'Mercury', a thick orange-brown layer labeled 'Wet Saw Dust', and a blue layer at the bottom labeled 'Copper Plate'. A label 'CuSO₄' points to the blue layer. A green wire with a green ball at its end is inserted into the top of the pot, touching the 'Zinc Powder' layer. A blue wire with a blue ball at its end is inserted into the top of the pot, touching the 'Mercury' layer. The entire pot is labeled 'Earthen Pot' at the bottom.

Place copper plates in an earthen pot, cover it with copper sulphate and Moistened saw dust. Spread zinc powder and cover it with mercury. Due to Chemical reaction +ve and -ve electricity is produced. He further says that due to this water is decomposed in to Oxygen and Hydrogen

Electrical Cell

An Interesting procedure, that gives proof for the usage and preparation of the battery cell is recorded in Agastya Samhita. The following lines illustrate the electrical cell.

The diagram shows a cross-section of an earthen pot. Inside the pot, there are four distinct layers. From top to bottom, they are: a dark grey layer labeled 'Zinc Powder', a light grey layer labeled 'Mercury', a thick orange-brown layer labeled 'Wet Saw Dust', and a blue layer at the bottom labeled 'Copper Plate'. A label 'CuSO₄' points to the blue layer. Two wires extend from the top of the pot: one with a green terminal and one with a blue terminal. The entire pot is labeled 'Earthen Pot' at the bottom.

Place copper plates in an earthen pot, cover it with copper sulphate and Moistened saw dust. Spread zinc powder and cover it with mercury. Due to Chemical reaction +ve and -ve electricity is produced. He further says that due to this water is decomposed in to Oxygen and Hydrogen

Electrical Cell

An Interesting procedure, that gives proof for the usage and preparation of the battery cell is recorded in Agastya Samhita. The following lines illustrate the electrical cell.

The diagram shows a cross-section of an earthen pot. Inside the pot, there are four distinct layers. From top to bottom, they are: a thin layer of dark grey material labeled 'Zinc Powder'; a layer of light brown material labeled 'Wet Saw Dust'; a layer of orange-brown material labeled 'Copper Plate'; and a bottom layer of blue material labeled 'CuSO₄'. Above the 'Zinc Powder' layer, there is a small green circle with a white line extending from it. Above the 'Copper Plate' layer, there is a small blue circle with a white line extending from it. The entire pot is labeled 'Earthen Pot' at the bottom.

Place copper plates in an earthen pot, cover it with copper sulphate and Moistened saw dust. Spread zinc powder and cover it with mercury. Due to Chemical reaction +ve and -ve electricity is produced. He further says that due to this water is decomposed in to Oxygen and Hydrogen
