Whether OI works for intraday trading ?

Whether OI useful ?

No one has a exact answer. But one effective way to make use OI in a very different perspective - OUT OF THE BOX from Traditional method

This is a EOD OI graph of ICICIBANK. Here i am trying to focus on strike price which has more than 2x OI comparing CE vs PE of individual strikes.

Below 880 strike CE vs PE in which 880 CE has 2x more OI (more writers) compare to 880 pe.

DATA

From EOD OI graph - Higher levels from ATM CE writers are high compare to PE writers . From OI the expectation is 880 levels will act as a resistance for minimum next trading session (Intraday)

THINK OUT OF BOX - What if 880 levels easily crossed by buyers ? - There is a high chance of price to continue move upside **DURING** intraday the writers to some extent they will panic which can lead to a fast directional move.

From the above OI graph of EOD 04/09 NOW refer the chart below of the same ICICIBANK for 05 sep

Main focus is not to take 880 levels as resistance just because of more CE OI. My focus if 880 is easily crossing and closing above it to open a bullish opportunity

From EOD OI graph - Lower levels from ATM PE writers are high compare to CE writers . From OI the expectation is 4000 levels will act as a support for minimum next trading session (Intraday)

THINK OUT OF BOX ? - What if 4000 levels easily crossed by sellers ? - There is a high chance of price to continue move downside DURING intraday the writers to some extent they will panic which can lead to a fast directional move.

From the above OI graph of EOD 04/09 NOW refer the chart below of the same BAJAJ AUTO for 05 sep

Main focus is not to take 4000 levels as SUPPORT just because of more PE OI. My main focus if 4000 is easily crossing

and closing below it to open a bearish opportunity
