

Twitter Thread by Nagato ■

Nagato ■
[@CryptoNagato](#)

I spent tens of hours researching these Crypto projects.

This thread is the result of all that hard work.

Here's my ultimate bear market accumulation list:

No shitcoins.

No bullshit.

No hopium.

Just a ton of projects that will shine in the next few months and years.

Enjoy■

But first, I want to share this picture with you.

Here you can find some of the criteria I use to decide whether a specific project could be a valuable investment.

Keep asking yourself these questions over and over again.

This market is crazy; conditions rarely stay the same.

Idea

- Is it a hot growth narrative?
- Is it innovative?
- Is it disruptive?
- How crowded is the space? How much of a head start do they have to capture the market?
- Do they solve real world problems and have a valid use case?
- Can they achieve a large network effect?

Team

- Is the team anonymous?
- Do they have quality partners/backers?
- Is the team qualified and adequate in man power to realize the potential?
- Between the team and backers, do they have good connections within the crypto space and/or the mainstream sector they are targeting?
- Do they provide regular community updates?
- Do they have a large community?
- Do they have an adequate marketing strategy and funds?

Technology

- Have they been audited by multiple firms and if vulnerabilities were exposed, were they addressed and resolved promptly?
- Is there regular, active development?

Price

- Is it currently pumping?
- Is it in accumulation?
- Does the market cap have enough room to grow to produce the desired ROI?
- Is the market cap justified?
- What is the risk/reward considering the current price?

Liquidity

- Where can I buy it?
- Is there enough liquidity to enter and exit your desired position size?

Token

- Look at the distribution, vesting periods, circulating supply and inflation (short term and long term)
- If the circulating supply is increasing by multiple X's in a short period of time, proceed with caution and consider waiting until the bulk of the coins have been released to invest.
- Is there a deflationary mechanism in place?
- Are there incentives to keep coins off the market such as staking or other lockups?
- Does the coin has utility that will create sustainable long term demand?
- Does demand for the token increase as use of the protocol increases?
- Does the token model allow for holders to benefit from

■■ DISCLAIMER ■■

Nothing you'll see here should be taken as financial advice.

The purpose of this thread is only to show you some (in my humble opinion) solid projects.

Don't buy something just cause I mentioned it!

Make sure to DYOR and, after that, do as you please.

LAST DETAILS:

- Besides \$QNT, the list goes from higher to lower market cap.

- There are a few high caps and a lot of mid/small caps cause I prefer to invest in unknown coins before the herd.
(Even though they are way more risky!■■■)

- I don't hold all these coins.

\$QNT

Website: <https://t.co/VYiaBKJY82>

Twitter: [@quant_network](https://twitter.com/quant_network)

CoinGecko: <https://t.co/mnQt4bdtPv>

QNT

Quant (QNT) is a blockchain interoperability network and operating system that was first announced in 2018. The project falls squarely into the interoperability solutions category of blockchain platforms. It's designed to help bridge the gap between various different blockchains and enterprise software using a simple plug-and-play solution that doesn't require teams to deploy any new infrastructure. It uses a continually expanding list of DLT and API connectors to allow different blockchains to communicate with one another via Quant's Overledger API gateway. This is achieved without sacrificing the autonomy, efficiency or speed of each chain, ensuring that each retains its unique properties.

\$XRP

Website: <https://t.co/Ama7cBsgDV>

Twitter: [@Ripple](https://twitter.com/Ripple)

CoinGecko: <https://t.co/3BKCDhY6eT>

XRP

Ripple is a for-profit technology platform and also a cryptocurrency (XRP), developed by Ripple Labs. The company focuses on providing real-time payment settlements and currency exchange services to financial institutions such as banks and payment processors. Over 100 companies worldwide have adopted Ripple software to guarantee fast, frictionless transactions.

\$ALGO

Website: <https://t.co/b9LRBmB1ld>

Twitter: [@Algorand](https://twitter.com/Algorand)

CoinGecko: <https://t.co/9VIsSXMxiO>

ALGO

Algorand is a self-sustaining, decentralized, blockchain-based network that supports a wide range of applications. These systems are secure, scalable and efficient, all critical properties for effective applications in the real world. Algorand will support computations that require reliable performance guarantees to create new forms of trust.

\$VET

Website: <https://t.co/pi3oqsTBqc>

Twitter: [@vechainofficial](https://twitter.com/vechainofficial)

CoinGecko: <https://t.co/WI0HurUkxV>

VET

VeChain (VET) is a versatile enterprise-grade L1 smart contract platform.

VeChain aims to use distributed governance and Internet of Things (IoT) technologies to create an ecosystem which solves major data hurdles for multiple global industries from medical to energy, food & beverage to sustainability and SDG goals. By leveraging the power of trustless data, VeChain is building the digital backbone that will underpin the fourth industrial revolution, which demands real-time and trustless data sharing between many participants.

\$HBAR

Website: <https://t.co/WtgoK5z99u>

Twitter: [@hedera](https://twitter.com/hedera)

CoinGecko: <https://t.co/Ekq1yfny7a>

HBAR

Hedera is the most used enterprise-grade public network for you to make your digital world exactly as it should be – yours. HBAR is the native, energy-efficient cryptocurrency of Hedera that powers the decentralized economy. Whether you're a startup or enterprise, a creator or consumer, Hedera goes beyond blockchain for developers to create the next era of fast, fair, and secure applications.

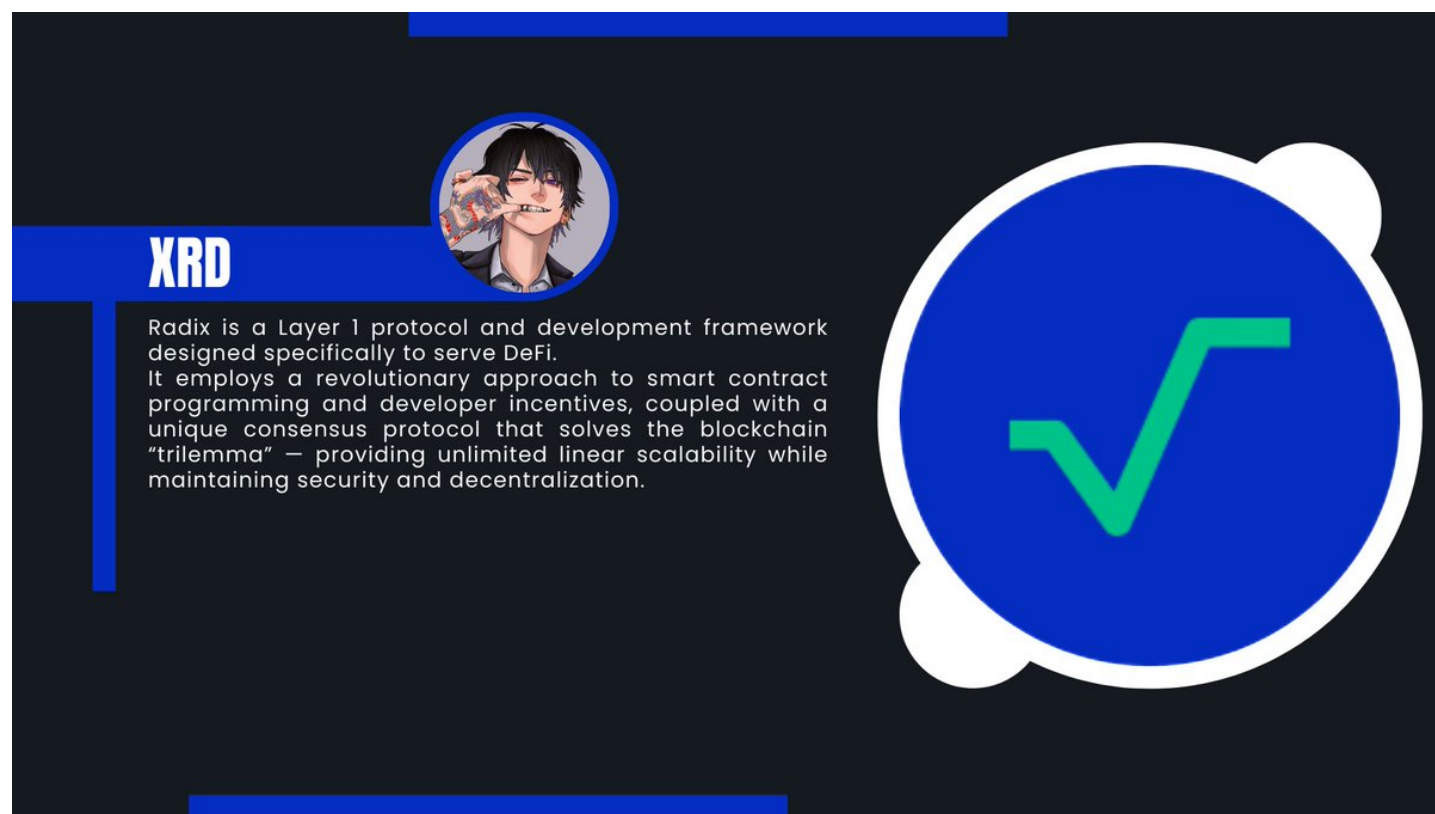

\$XRD

Website: <https://t.co/KnUrg030Se>

Twitter: [@radixdlt](https://twitter.com/radixdlt)

CoinGecko: <https://t.co/a4PbzmdTZZ>

A promotional graphic for Radix (XRD) on a dark blue background. On the left, the text 'XRD' is displayed in large, bold, white letters. To its right is a circular profile picture of a man with black hair and a goatee, wearing a blue shirt. Below the 'XRD' text, a white paragraph describes Radix as a Layer 1 protocol and development framework designed for DeFi, highlighting its revolutionary approach to smart contract programming, developer incentives, and a unique consensus protocol that solves the blockchain trilemma by providing unlimited linear scalability while maintaining security and decentralization. On the right side of the graphic is a large, stylized green checkmark inside a white circle with a blue border.

XRD

Radix is a Layer 1 protocol and development framework designed specifically to serve DeFi. It employs a revolutionary approach to smart contract programming and developer incentives, coupled with a unique consensus protocol that solves the blockchain "trilemma" – providing unlimited linear scalability while maintaining security and decentralization.

\$XDC

Website: <https://t.co/NcsxjXtRXp>

Twitter: [@XinFin_Official](https://twitter.com/XinFin_Official)

CoinGecko: <https://t.co/k1f4uTGOOz>

XDC

XinFin is an enterprise-ready hybrid Blockchain technology company optimized for international trade and finance. The XinFin network is powered by the native coin called XDC. The XDC protocol is architected to support smart contracts, 2000TPS, 2seconds transaction time, KYC to Masternodes (Validator Nodes). The XDC Chain (XinFin Digital Contract) uses XinFin Delegated Proof of Stake (XDPoS), with the intending to create a 'highly-scalable, secure, permission, and commercial grade' blockchain network.

\$CSPR

Website: <https://t.co/a0EMwmcMTZ>

Twitter: [@Casper_Network](https://twitter.com/Casper_Network)

CoinGecko: <https://t.co/JBX8iu41yq>

CSPR

The Casper Network is a Proof of Stake (PoS) enterprise blockchain that is designed to help enterprises begin building blockchain-enabled products and services quickly and effectively. The Casper Network features upgradeable smart contracts, developer-friendly features, and lower transaction costs than most Layer-1 blockchain offerings. Casper uses a type of PoS consensus protocol called Casper CBC, which is what the Ethereum network is expected to adopt once it transitions to its eventual 3.0 model.

\$EWT

Website: <https://t.co/dc0SynNSup>

Twitter: [@energywebx](https://twitter.com/energywebx)

CoinGecko: <https://t.co/VguielbpNM>

The graphic features a dark background with purple accents. On the left, the letters "EWT" are displayed in a bold, white, sans-serif font. To the right of the text is a circular profile picture of a person with dark hair and a goatee, wearing a dark jacket. Further to the right is a large, stylized white '@' symbol inside a purple circle. The overall design is modern and tech-oriented.

EWT

The Energy Web Token is the native cryptocurrency of the Energy Web Chain, an open-source platform designed to support the development of energy sector applications by building a more traceable, democratized, and decarbonized energy system. Historically, grid operators have provided the physical infrastructure to enhance electrical power usage and relieve reliance on carbon energy consumption. The Energy Web Chain (EW Chain) aims to provide the digital infrastructure that connects the grid operators, customers, and physical assets

\$AZERO

Website: <https://t.co/GYUatNXo0B>

Twitter: [@Aleph_Zero](https://twitter.com/Aleph_Zero)

CoinGecko: <https://t.co/MOyNnW0E3M>

AZERO

Aleph Zero is a privacy-enhancing, Proof-of-Stake public blockchain with instant finality. It's enterprise-ready, high-performance network is built on a novel, Directed Acyclic Graph (DAG)-based consensus protocol that has been peer-reviewed and presented at an ACM conference. Aleph Zero uses the DAG as an intermediary data structure, but can still be categorized as a blockchain.

\$DAG

Website: <https://t.co/Ce7VzHzAxA>

Twitter: [@Constellation](https://twitter.com/Constellation)

CoinGecko: <https://t.co/MEShQB477Y>

DAG

Constellation's technology aims to facilitate secure big data processing by offering the ability to on board external data sets through easy to use API's that integrate directly in existing applications. By utilizing a DAG (directed acyclic graph) protocol and customizable state channels, Constellation embraces an evolution to smart contracts that enables new data sources to integrate on DLT.

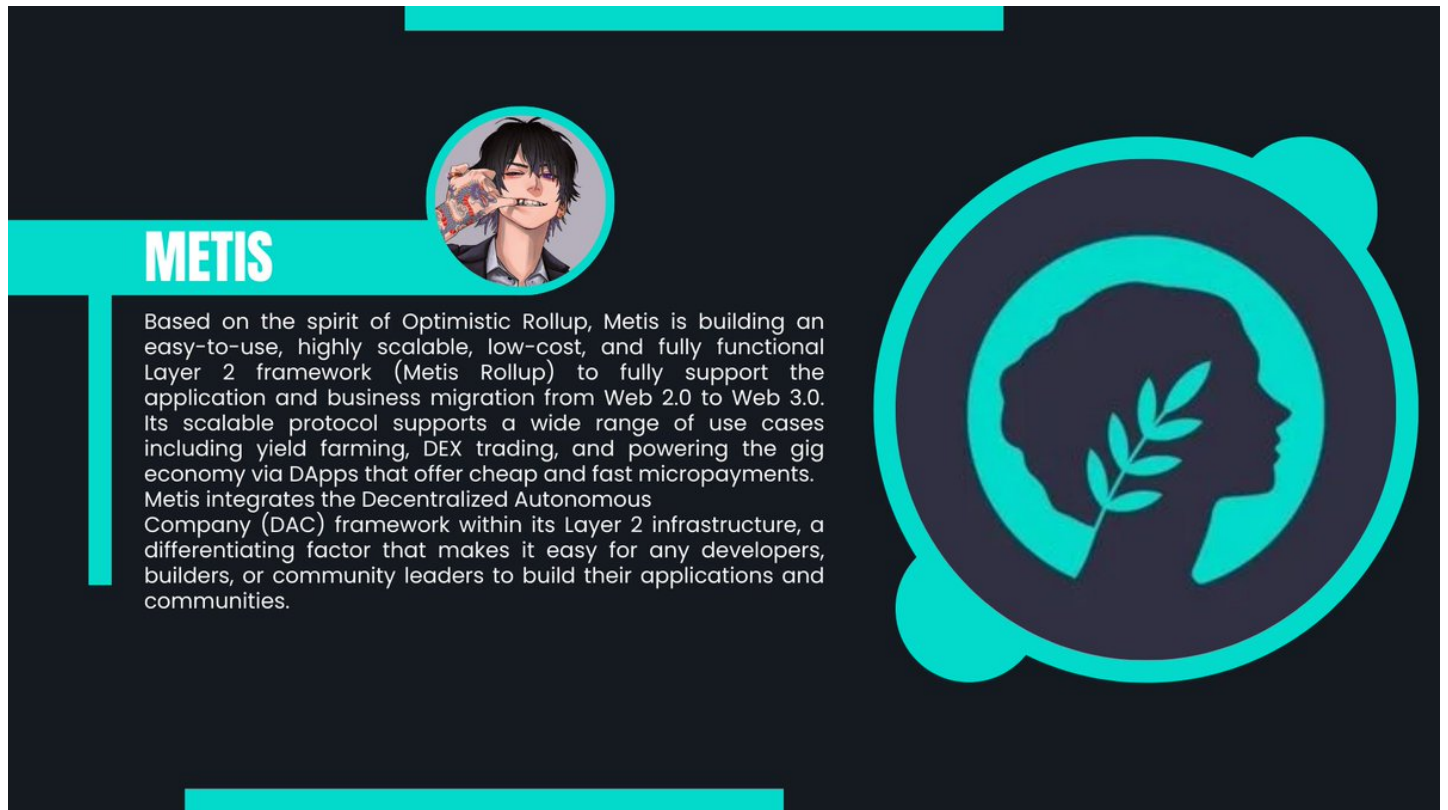

\$METIS

Website: <https://t.co/idYaebEA54>

Twitter: [@MetisDAO](https://twitter.com/MetisDAO)

CoinGecko: <https://t.co/6Ch8IDNhJ3>

A promotional graphic for MetisDAO. It features a dark blue background with a light blue horizontal bar on the left. On the left bar, the word "METIS" is written in white. To the right of the text is a circular profile picture of a person with dark hair and a goatee, wearing a blue shirt. Further right is a large, stylized logo consisting of a light blue circle containing a dark blue silhouette of a person's head in profile, facing right. A light blue leafy branch is positioned in front of the silhouette. The overall design is modern and tech-oriented.

METIS

Based on the spirit of Optimistic Rollup, Metis is building an easy-to-use, highly scalable, low-cost, and fully functional Layer 2 framework (Metis Rollup) to fully support the application and business migration from Web 2.0 to Web 3.0. Its scalable protocol supports a wide range of use cases including yield farming, DEX trading, and powering the gig economy via DApps that offer cheap and fast micropayments. Metis integrates the Decentralized Autonomous Company (DAC) framework within its Layer 2 infrastructure, a differentiating factor that makes it easy for any developers, builders, or community leaders to build their applications and communities.

\$API3

Website: <https://t.co/FXsrxnDxHq>

Twitter: [@API3DAO](https://twitter.com/API3DAO)

CoinGecko: <https://t.co/ETMvzMjvwr>

API3

API3's stated goal is to allow decentralized versions of APIs to be built, managed and monetized at scales. As blockchain technology plays an ever bigger role in the economy — from decentralized finance to supply chain management — the team behind this project says it has never been more important for smart contracts to provide “timely, reliable real-world data.”

\$TRAC

Website: <https://t.co/QXFTD09R5I>

Twitter: [@origin_trail](https://twitter.com/origin_trail)

CoinGecko: <https://t.co/3do0JxIkSu>

TRAC

OriginTrail is the world's first Decentralized Knowledge Graph, organizing humanity's most important assets, and making them discoverable, verifiable and valuable. It connects the physical world (art, healthcare, fashion, education, supply chains, ...) and the digital world (blockchain, smart contracts, Metaverse & NFTs, and DeFi, ...) in a single connected reality.

Advanced knowledge graph technology currently powers trillion-dollar companies like Google and Facebook. By reshaping it for Web3, the OriginTrail Decentralized Knowledge Graph provides a crucial fabric to link, verify, and value data on both physical and digital assets.

\$UOS

Website: <https://t.co/F4qyi8f01s>

Twitter: [@ultra_io](https://twitter.com/ultra_io)

CoinGecko: <https://t.co/6dR7sLPDuN>

UOS

Ultra is a publishing platform and ecosystem for video games and video game content. Ultra's mission is to do away with the current monopoly held by publishing platforms like Steam and provide new opportunities to game developers, players, and influencers. Ultra promises a solution that is more equitable to players and developers alike. Players can benefit from immediately playable games, earn UOS by using the platform, and access platform-exclusive games. Besides content and game publishing, Ultra offers a demand-side and service-side platform for advertisers, the opportunity for players to resell their used games, and a platform-exclusive app.

\$MNW

Website: <https://t.co/f7fn1j3Q1q>

Twitter: [@MNWSupplyChain](https://twitter.com/MNWSupplyChain)

CoinGecko: <https://t.co/dfxCoePRNU>

MNW

The Morpheus. Network is a full-service, global, automated, supply chain platform for the global trading industry utilizing blockchain technology. This is achieved with Smart Contracts driving the supply chain with predetermined, automated work contracts, shipping & customs documents as well as automated international payments to over 1600 banks globally through integration with the SWIFT Payments Hub.

The layering of other blockchain or non-blockchain technologies to be included as necessary objectives in a given Smart Contract further automate any complex supply chain (eg. RFID scans, data transfers)

\$FET

Website: <https://t.co/GC1I4NMYAZ>

Twitter: [@Fetch_ai](https://twitter.com/Fetch_ai)

CoinGecko: <https://t.co/bO8w7UMIJ4>

FET

Founded in 2017 and launched via IEO on Binance in March 2019, Fetch.AI is an artificial intelligence (AI) lab building an open, permissionless, decentralized machine learning network with a crypto economy. Fetch.ai democratizes access to AI technology with a permissionless network upon which anyone can connect and access secure datasets by using autonomous AI to execute tasks that leverage its global network of data. The Fetch.AI model is rooted in use cases like optimizing DeFi trading services, transportation networks (parking, micromobility), smart energy grids, travel — essentially any complex digital system that relies on large-scale datasets.

\$MTRG

Website: <https://t.co/anLdDj68BD>

Twitter: [@Meter_IO](https://twitter.com/Meter_IO)

CoinGecko: <https://t.co/1dAfbe7og1>

MTRG

Meter Governance (MTRG) is a DeFi infrastructure with an in-built, metastable, crypto-native currency. The platform claims to function as a high-performance, highly-decentralized side-chain for Ethereum and multiple other public chains. The Meter Governance structure utilizes Proof of Work for building a low-volatility and fully decentralized coin for payments and expenses. The platform uses Proof of Stake based on HotStuff with the MTRG coin for validating the transactions, as per the website's claims. The hybrid consensus tool makes the platform fast; the Meter system can efficiently process thousands of trade transactions per second, achieving finality instantly and securely

\$SAITO

Website: <https://t.co/5MiG8swklw>

Twitter: [@SaitoOfficial](https://twitter.com/SaitoOfficial)

CoinGecko: <https://t.co/SzLj3dVPaL>

SAITO

Saito is a Web3 Foundation grant recipient that runs blockchain applications directly in your browser. The network pays ISPs instead of miners or stakers, allowing Web3 projects to self-fund infrastructure instead of passing costs to predatory monopolies like Infura.

\$TAO

Website: <https://t.co/MnQEKf6QCQ>

Twitter: [@bittensor](https://twitter.com/bittensor)

CoinGecko: Still not listed there.

TAO

Bittensor is an open-source protocol that powers a decentralized, blockchain-based machine learning network. Machine learning models train collaboratively and are rewarded in TAO according to the informational value they offer the collective. TAO also grants external access, allowing users to extract information from the network while tuning its activities to their needs.

\$LCX

Website: <https://t.co/moUm6m6aNr>

Twitter: [@lcx](https://twitter.com/lcx)

CoinGecko: <https://t.co/YNUB9xY4Dt>

LCX

LCX aims to build the new infrastructure for digital finance, focusing on all aspects of compliance and regulation. Investing to build AML and KYC technology solutions at the institutional and consumer level. LCX is continuously engaging with policy makers, regulators and financial institutions and will routinely participate in financial and security audits, as well as regulatory compliance reviews.

\$ALBT

Website: <https://t.co/t1JSoCMOUN>

Twitter: [@allianceblock](https://twitter.com/allianceblock)

CoinGecko: <https://t.co/u6xeWLtLHo>

ALBT

AllianceBlock is creating an ecosystem of stakeholders across the full spectrum of traditional and decentralised finance with a vision to create a fully decentralised and globally compliant capital market. Industry stakeholders and service providers can become a 'node' in the AllianceBlock Ecosystem and propose their services while being compliant with multi-jurisdictional regulations and also seamlessly plugging into legacy TradFi systems.

\$ROUTE

Website: <https://t.co/mNAXkGBa9j>

Twitter: [@routerprotocol](https://twitter.com/routerprotocol)

CoinGecko: <https://t.co/3sQomBBQXY>

ROUTE

Router Protocol is a crosschain-liquidity aggregator platform that was built to seamlessly provide bridging infrastructure between current and emerging Layer 1 and Layer 2 blockchain solutions. The goal is to enable users to swap their assets from different networks seamlessly in a near-instant and low-cost manner.

\$LTX

Website: <https://t.co/O8fT5NOXUY>

Twitter: [@LatticeExchange](https://twitter.com/LatticeExchange)

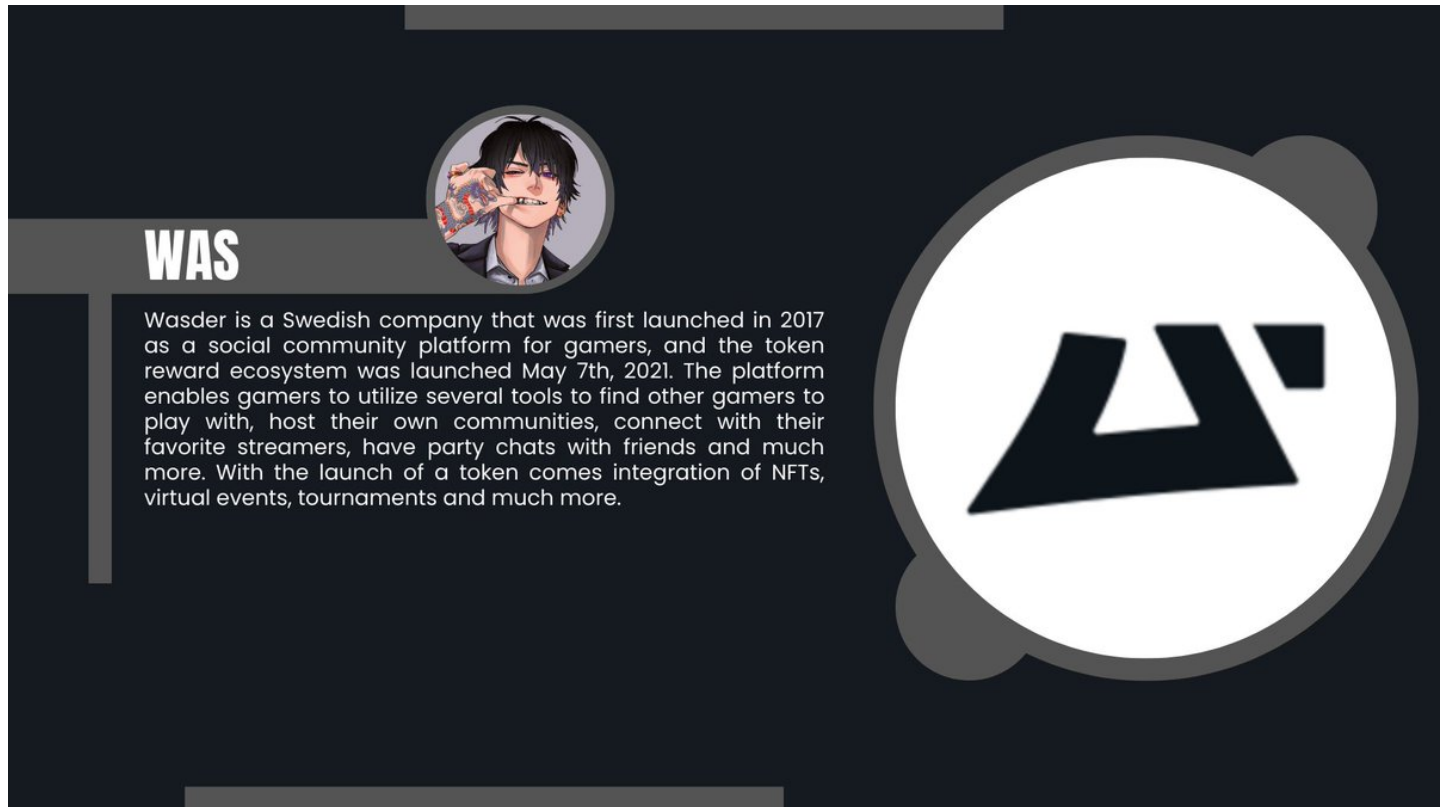

CoinGecko: <https://t.co/6GL30ryQxb>

\$WAS

Website: <https://t.co/kDLXx4QkfZ>

Twitter: [@WasderGG](https://twitter.com/WasderGG)

CoinGecko: <https://t.co/VYwKOqbjD4>

A promotional graphic for the Wasder token. It features a dark blue background with a large, stylized white 'W' logo on the right. On the left, there is a circular profile picture of a young man with black hair and a goatee, holding a small object. Below the profile picture, the text 'WAS' is written in large, bold, white letters. To the right of 'WAS', there is a paragraph of text describing the company and its token.

WAS

Wasder is a Swedish company that was first launched in 2017 as a social community platform for gamers, and the token reward ecosystem was launched May 7th, 2021. The platform enables gamers to utilize several tools to find other gamers to play with, host their own communities, connect with their favorite streamers, have party chats with friends and much more. With the launch of a token comes integration of NFTs, virtual events, tournaments and much more.

\$WTK

Website: <https://t.co/jiRIWdbGbK>

Twitter: [@WadzPay](https://twitter.com/WadzPay)

CoinGecko: <https://t.co/YEQmOXUo2g>

WTK

WadzPay (WTK) is a platform that delivers infrastructure for stable coins and central bank digital currency (CBDC) technologies to allow institutions and governments to commercialize programs both internationally and domestically. WadzPay built an agnostic and exchangeable blockchain-based payments ecosystem. The platform saw the possibility for CBDC and Digital Assets to lead the next course in the payments industry: allowing swifter payments, advancements in security, and cost-efficiency with optionality.

Projects not out yet:

\$FLR

Twitter: [@FlareNetworks](https://twitter.com/FlareNetworks)

Website: <https://t.co/Jk71HJABLb>

\$LEOX

Twitter: [@galileoprotocol](https://twitter.com/galileoprotocol)

Website: <https://t.co/UOQliwyaye>

(I'm part of the team, follow us on Telegram if you don't want to miss any updates: <https://t.co/k4cwAsk2nF>)

FLR

The Flare Network is a decentralized blockchain system that uses the Flare Consensus Protocol. While proof-of-work (PoS) systems typically have scalability limits, Flare pushes past these limits with a permissionless network that consists of a stabilized coin.

Projects I used to like but I'm not a "super fan" of anymore:

(I'm still keeping an eye on them, but I think there are better opportunities).

\$HTR

CoinGecko: <https://t.co/MT2B1bV0dz>

\$ZCX

CoinGecko: <https://t.co/GEnebaQo6F>

\$VXV

CoinGecko: <https://t.co/PdDq5MIld89>

HTR

Hathor can be described as a scalable and easy-to-use distributed ledger to support light financial transactions and contracts. It is also a consensus platform, but its architecture is novel; it is a hybrid one designed by combining Directed Acyclic Graph (DAG) and blockchain technologies.

This hybrid architecture creates the perfect environment for multiple use cases, especially where high scalability is needed.

DISCLAIMER■

This list is not definitive.

- I'll keep on adding more projects if I find something interesting.
- I'll remove projects if they don't move in the direction I expect them to go.

Follow me if you don't wanna miss any updates ■ [@CryptoNagato](#)

One more thing:

"WHERE CAN I BUY THEM"?

You can find 99% of them on my favourite platforms.

Here are my referral links, in case you wanna use them♥■

[@kucoincom](#) ■ <https://t.co/TKc8796PJ3>

[@CoinMetro](#) ■ <https://t.co/QgBoW5uQo6>

[@MEXC_Global](#) ■ <https://t.co/w60cU5fMLE>

Thanks for reading! ♥■

If you enjoyed this list and found it helpful, please RT the first tweet, that would help me a lot!

Also, make sure to let me know if you hold some of the above mentioned coins and tell me why you're bullish on them!

DID I MISS SOMETHING? ■
