

The Ring of Fire is a major area of seismic and volcanic activity, forming a large continuous belt that encircles the Pacific Ocean basin. This area is characterized by frequent earthquakes and volcanic eruptions. The Ring of Fire is primarily composed of the boundaries between several major tectonic plates, including the Pacific Plate, North American Plate, South American Plate, Nazca Plate, Cocos Plate, Caribbean Plate, Indo-Australian Plate, and Philippine Plate. The Ring of Fire is also known as the Ring of Fire because of the high frequency of volcanic activity along its boundaries.
