Reminded me of my Borosil renewables chart of last year in July.

AWL - look at the ranges of contraction on the chart https://t.co/2XMhqZQu8X

Borosil Renewables - Patterns like these must be looked at carefully and must be kept on the radar. Herein price is contracting which generally signifies shifting of hands (from weak to strong). If you go wrong, the risk is limited in these. pic.twitter.com/iqyoeslZjy
