New publication by @NavdanyaInt: Bill Gates & his Fake solutions to #ClimateChange" - Technofixes, Industrial Ag, Billionaires Ventures, & Fake Food will not save our Planet - Biodiversity & Agroecology are True Solutions to Climate Change https://t.co/7IXtZo01bo @drvandanashiva

Behind a humanitarian veil, Bill Gates favours the interests of corporations, promoting failed technological solutions that harm ecosystems & divert attention from the deep systemic changes needed to address the crises we are facing today https://t.co/7IXtZo01bo @drvandanashiva

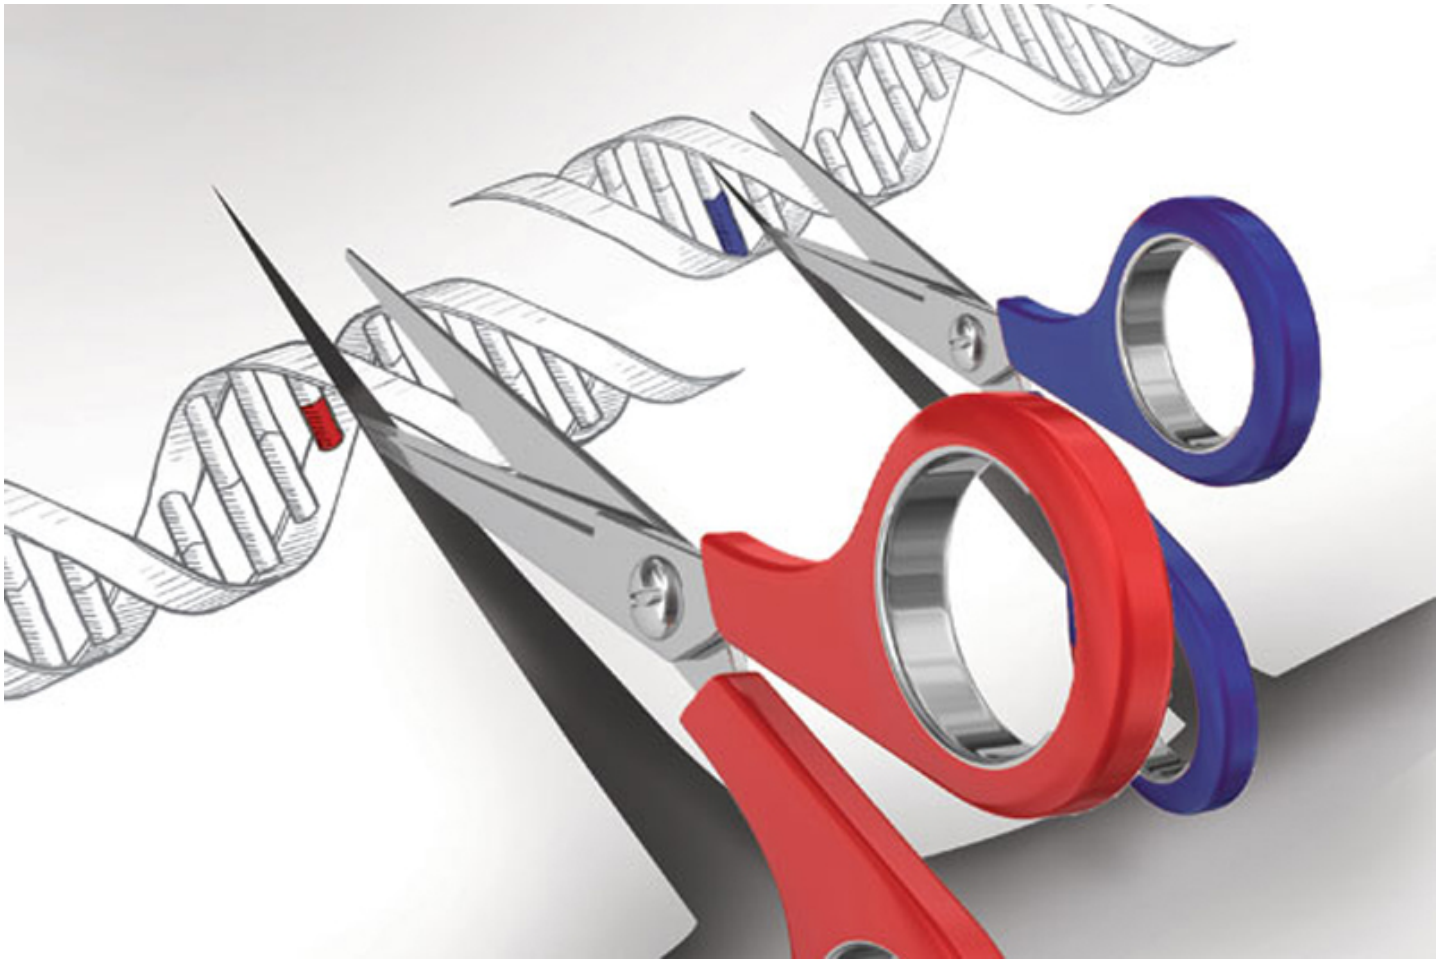

Why I ♥ fertilizer

I visited a warehouse in Tanzania that was filled with a magical innovation that can lift millions out of poverty.

By **Bill Gates** | November 14, 2018 • 3 minute read

The common thread that runs through all Bill Gates' programs is the idea that innovation and the market will always save us, that any problem can (and should only) be solved through technology https://t.co/7IXtZo01bo @drvandanashiva #Gates2GlobalEmpire

Bill Gates's million-dollar investments allow him to impose his strategy through direct influence over all types of global development protagonists, from international and state policy to private companies, the media and public opinion https://t.co/7IXtZo01bo @drvandanashiva

The New York Times

Bill Gates Takes On Climate Change With Nudges and a Powerful Rolodex

Bill Gates stood with world leaders in November at the climate change conference in France. From left, Prime Minister Justin Trudeau of Canada, Mr. Gates, President Obama, President François Hollande of France and Prime Minister Narendra Modi of India. Pool photo by Ian Langsdon

Bill Gates plans to stop global warming by reducing emissions to zero, while his push for short-term techno-fixes, investments & political agenda show little alignment with the goal of truly fighting #climatechange, hunger & poverty https://t.co/7IXtZo01bo @drvandanashiva

Gates’ private market & power interests are particularly apparent in his push for agricultural transformation. Through programs like #AGRA, #AgOne #Ag Tech, the #BMGF has been pushing an industrial agricultural model for decades https://t.co/7IXtZo01bo @drvandanashiva

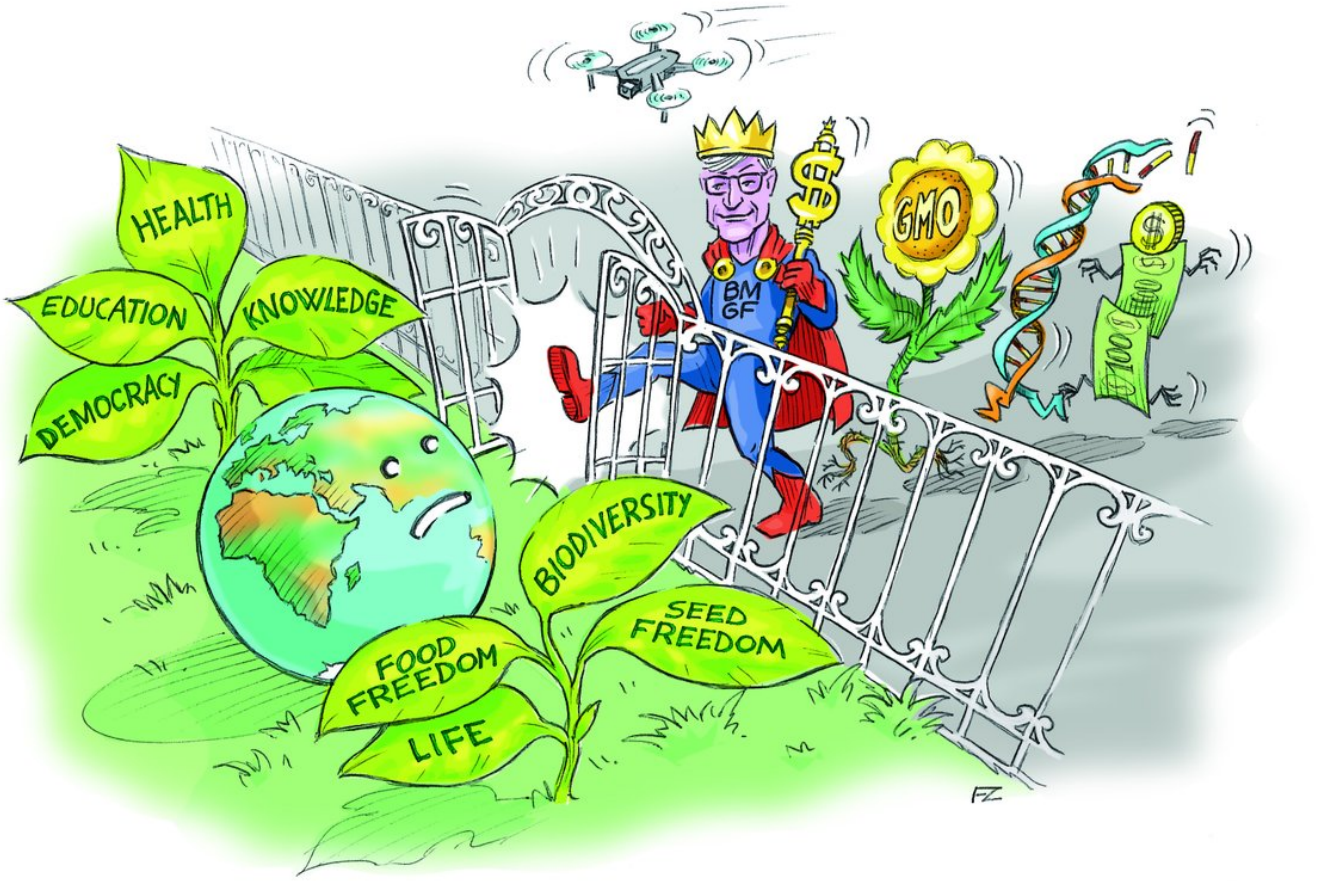

Gates' @Breakthrough Energy Ventures investment fund is supported by billionaires. They 'Help the world get to net-zero' by funding companies riddled with BigAg BigFood & BigTech (ex DuPont & Monsanto + PepsiCo & Microsoft executives) https://t.co/7IXtZo01bo @drvandanashiva

The same corporations which precipitated our health & ecological crisis & have continually denied the detrimental effects of their innovations are now selling us back equally risky solutions to the problems they created https://t.co/7IXtZo01bo @drvandanashiva

#Climatechange cannot be fully addressed without recognizing the central role of the industrialized & globalized food system in creating the climate crisis
https://t.co/7IXtZo01bo @drvandanashiva #Gates2GlobalEmpire https://t.co/DsoRBZXU7k

#Patents on fake food growing techniques,which Gates invests in,are a profit making tool for corporations & billionaires, shifting power toward biotech companies & ignoring solutions offered by the regenerative organic agriculture movement https://t.co/7IXtZo01bo @drvandanashiva

We don't need to go further down the path that has destroyed biodiversity & rural economies by following techno-fixes. #Agroecology is another path, providing a long-lasting solution to #climatechange and working to ensure food sovereignty https://t.co/7IXtZo01bo @drvandanashiva

2 futures are emerging. 1 leads to the regeneration of our planet, health & democracy. The other leads to the collapse of the ecosystems. The future of diverse species, our common future, & our daily bread depend on which road we take https://t.co/7IXtZo01bo @drvandanashiva
