I have studied the pandemic response of many countries. One of them got a key element right, which resulted in very few deaths: Japan. Their response was to keep people OUT of hospitals. A policy of early home treatment works best, hospitals only for severe cases & NO INTUBATIONS

JAPAN: "No restrictions were placed on residents' movements, and businesses from restaurants to hairdressers stayed open. No high-tech apps that tracked people's movements were deployed." RESULT: Among the lowest deaths in the world. https://t.co/QhTuuDsVwL

Saving the NHS simply means providing early treatment kits in pharmacies & avoiding hospitals for Covid19 patients. For Covid19 infections during a pandemic, hospitals are the problem, not the solution.

I have read accounts of people with high fever literally turned away from hospitals, yet being told by phone what treatment protocol to follow. That was the best pandemic response by far, NOT lockdowns.

JAPAN had some of the lowest Covid19 mortality in the world:
-NO LOCKDOWN
-NO TEST AND TRACE
-NO BUSINESS CLOSURES
-NO HOSPITAL FOR NON CRITICAL CASES
-HOME TREATMENT
-HEALTHY DIET
-LOW OBESITY
