RT-PCR corona (test) scam

Symptomatic people are tested for one and only one respiratory virus. This means that other acute respiratory infections are reclassified as

> 4/10
>
> ...indication, first of all that testing for a (single) respiratory virus is done outside of surveillance systems or need for specific therapy, but even so the lack of consideration of Ct, symptoms and clinical findings when interpreting its result. https://t.co/gHH6kwRdZG
>
> — Dr. Thomas Binder, MD (@Thomas_Binder) October 22, 2020

2/12

It is tested exquisitely with a hypersensitive non-specific RT-PCR test / Ct >35 (>30 is nonsense, >35 is madness), without considering Ct and clinical context. This means that more acute respiratory infections are reclassified as COVID. https://t.co/VSIB2iL2OV

> 6/10
>
> The neither validated nor standardised hypersensitive RT-PCR test / Ct 35-45 for SARS-CoV-2 is abused to mislabel (also) other diseases, especially influenza, as COVID-19.https://t.co/AkFIfTCTkS

3/12

The Drosten RT-PCR test is fabricated in a way that each country and laboratory perform it differently at too high Ct and that the high rate of false positives increases massively due to cross-reaction with other (corona) viruses in the "flu season". https://t.co/jf2WfzwQ45

> External peer review of the RTPCR test to detect SARS-CoV-2 reveals 10 major scientific flaws at the molecular and methodological level: consequences for false positive results.https://t.co/mbNY8bdw1p pic.twitter.com/OQBD4grMth

4/12

Even asymptomatic, previously called healthy, people are tested (en masse) in this way, although there is no epidemiologically relevant asymptomatic transmission. This means that even healthy people are declared as COVID patients.
https://t.co/Z24snyw6by

> Thread web\u2b06\ufe0f\u2b07\ufe0f
>
> The fabrication of the "asymptomatic (super) spreader" is the coronation of the total nons(ci)ense in the belief system of #CoronasWitnesses.
>
> Asymptomatic transmission 0.7%; 95% CI 0%-4.9% - could well be 0%!https://t.co/VeZTzxXfvT

5/12

Deaths within 28 days after a positive RT-PCR test from whatever cause are designated as deaths WITH COVID. This means that other causes of death are reclassified as COVID.
https://t.co/k2xzmRCQSR

> 8/8
>
> By the way, who the f*** created this obviously (almost) worldwide definition of #CoronaDeath?
>
> This is not only medical malpractice, this is utterly insane!https://t.co/FFsTx4L2mw

Testing is not done for two or better three genes, but for one only, the E gene. This means that the already low specificity is further reduced, which inflates the number of cases and the positivity rate.
https://t.co/GNz1sgAEvY

> Surprise, surprise!
>
> After the end of the first(?) SARS-CoV-2 season in 04/20 it became difficult to get "asymptomatic" false positive "cases" even at high Ct, so the already low specificity had to be decreased and the already high cross reactivity had to be increased even more. https://t.co/DkugmCFzPX pic.twitter.com/2SeW5qRJQB

7/12

The number of RT-PCR tests is increased. This inflates the case numbers, the positivity rate does not change.
https://t.co/tPBDUKOaxo

> There has never been an exponential growth of the number of people infected with SARS-CoV-2 but only an exponential growth of the number of infected people who were tested.#SARSCoV2#COVID19https://t.co/Q63ydr8Cda https://t.co/3SnX2XsFIc pic.twitter.com/bP0qDeS0zl

8/12

Pre-selection of positive RT-PCR tests with antigen tests inflates RT-PCR case numbers and positivity rate.
https://t.co/9sLSJDUEmG

> By pre-selecting positive RT-PCR tests with positive antigen tests, the positivity rate of RT-PCR tests increases massively, thus allowing the government to scare the populace even more. https://t.co/7GganSiZef
>

9/12

While all positive RT-PCR tests are reported, only negative RT-PCR tests performed in medical facilities are. This inflates the positivity rate.
https://t.co/wzYrmo66xQ

> The latest scam by the \U0001f1e8\U0001f1ed Federal Office of Public Health Fraud: While they report all positive tests, they report negative tests from medical facilities only, so omit the negative test results from nursing homes, schools, hotels and companies: The positivity rate explodes. \U0001f61c https://t.co/wyMbkthdeS

10/12

Serial positive RT-PCR tests in the same person are reported seperately as new cases. This inflates the case numbers and the positivity rate.
https://t.co/L5vetlw7uS

> Serial positive RT-PCR tests in the same person are separately reported by the RKI (Robert Koch Institue) as "new cases": Another one of the countless fraud schemes to inflate the "case numbers" - whether it is the same in \U0001f1e8\U0001f1ed at the FOPH highly likely is a rhetorical question. https://t.co/b1K1ONdhp4

In my universe, the public health authorities, the science task forces, and the governments are criminal organisations. They must finally be deposed and condemned.
https://t.co/1b6LIV0KFO

> If there was a pandemic, there would be a representative cohort in each country that would be regularly tested with standardised validated tests. Neither exists. Rather, we are experiencing a virtual test pandemic for the purpose of scaring the populace, in\U0001f1e8\U0001f1ed a criminal offence. https://t.co/Ug57Xo2Hjo pic.twitter.com/n5ioCpzr2A
