A 58 year old nurse I've know for 15 years died today, I found her in her room in bed, she was pretty healthy, she was semi retired.....She received the vaccine a week and a half ago, I'll be doing some serious investigation, as I don't believe it was her time today. gutted is not the word.

I got the Pfizer vaccination last Friday. Friday night I had a sore arm and headache. Saturday I had a rollercoaster temp(mostly low), headache, body aches, lethargy, Sunday I had all the same symptoms and add a slight cough. Monday morning my sinuses felt like they were on fire and I lost taste and smell in addition to all the other symptoms I was already experiencing. I got tested on Monday afternoon. Got a positive test result by Tuesday afternoon. I've been told by doctors that you can't get a positive test result from the vaccine. I've been told by RN's that several people they know who were vaccinated, became covid positive in the days to follow. Not sure what to believe at this point but I am currently at home with covid, feeling like complete shit. This is my experience. 🤷‍♀️

I went to work today and ended up in the ER. Thank god I work at a hospital. I'm positive this episode is from the Covid19 vaccine. I had tachycardia. My heart beat was 239. I haven't felt right since I got the injection on Tuesday. I have had a headache ever since. I will not be getting the 2nd shot. This was my experience with the vaccine I felt I should share it.

https://t.co/UATLrSFonQ

anyway sure enough my Dad who is otherwise healthy is feverish, slurred speech and extreme fatigue . that is all i know so far. I hope that is all.. But i know these side effects come delayed often.

"**San Diego Vaccination** Super Station" event goes terribly wrong as many Moderna vaccine recipients are carted away in ambulances following vaccine injury. Eyewitnesses report far more injuries than the "6" mentioned in the story. @SupFletcher is to blame.

My father who has dementia and is in care had the Pfizer first vaccine shot last week, by the weekend him and 2 others were in hospital. He was found collapsed and taken to hospital.
His symptoms are shortness of breath, cannot walk, legs shaking and incontinent, he was not this way before and other than the dementia of good health generally.
They ran 2 negative PCR tests at hospital, but then did bloods and said they found Covid so have stuck him in a Covid ward. He is eating, but cannot walk still, they of course say this is down to Covid which in my opinion is 100% not.
