New data on Delta-Efficacy or Effectiveness (not■to■ comparison):

Pfizer: Wuhan=95% | Delta=64%
COVAXIN: Wuhan/Delta=78% | Delta=65%

All vaccines prevent >93% of hospitalizations. Regardless of the vaccine, get it, and wear a mask to get to near 100%.

Continuing to build evidence in proving our hypothesis:

The broad epitope coverage of an inactivated vaccine leads to a marginal reduction in efficacy/neutralization against Delta (already demonstrated this finding) and hopefully, tomorrow's new Variant of Concern.

Disclaimer: Pfizer effectiveness and Covaxin efficacy data were not sourced from peer-reviewed papers
