A teachable moment for Bayesian reasoning – when one study finds a result that's massively different than all the others, and, moreover, conflicts with what we know about the science, there's a pretty good chance it's either a fluke or it's wrong.

> The Israeli estimate of relatively high immune escape from Delta that a lot of you were freaking out about now looks like it was the result of sloppy statistical analysis. https://t.co/F5sHsJDFF1
