The new age of privacy, and the crypto ecosystem that will enable it.

A Thread.
$XHV $SCRT $RUNE
1/

Throughout my research, @HavenXHV The Haven protocol renewed my faith, that privacy wasn't just a temporary trend, but something with actual, sustainability. The creation of a private bank, exchange, and access to real world assets in completely privacy of my own vault. $XHV
2/

Haven's offering to the world, with it's private assets $xUSD $xEUR $xGOLD and xSilver, made me research what else can be done privately, now that I have private stable coin options. My first question was, if I wanted to sell my private assets, how would I do it? $XHV
3/

It didn't take me long before I discovered $RUNE and @thorchain_org and their cross chain liquidity pools and decentralized exchange capabilities. How anyone can offer liquidity and earn rewards and trading fees for doing so. But also,how all trading pairs,are interchangable.
4/

This made me realize that as Thorchain grows in popularity,they will provide the ability for everyone, across the cryptosphere,to trade any coin for any coin. Kind of like uniswap, but cross chain,and outside, yet including, the erc-20 ecosystem. It's uniswap on steroids. $XHV
5/

It's the Binance of decentralized exchanges, and that is no small feat, yet it's much needed in a world where centralized exchanges track everything we do, giving us no privacy over our own trades, freezing our funds when they feel like it. This does not happen with Thorchain.
6/

Thorchain will be the liquidity provider for $XHV,and its primary stable coin $xUSD. Since XHV and its ecosystem of xAssets are entirely private,you can now move between chains,without worry or wait time,of minting back to $XHV and finding enough liquidity on an open exchange.
7/

Being able to move between private xUSD to any chain through thorchain,is a freedom that is much needed for many people across the world. It will give people the ability to keep their funds private and accessible only by them,while still granting them access to all coins. $RUNE
8

So now I had my own plan, use the $XHV haven protocol as my bank for my crypto gains, to keep funds safe and private, while using Thorchain to grant exposure to other coins as needed. Not to mention, having fun with xAssets getting exposure to real world assets privately.
9/

However, I wanted to dig deeper, what else was being built that would be cool and support the new world of privacy? Lo and behold, I stumbled across the @SecretNetwork .... A network aimed at creating private smart contracts and making erc-20 tokens private! $XHV $RUNE $SCRT
10/

The secret network allows you to turn your eth or your erc-20 token into a private token. For example, USDT goes onto the secret bridge, and become $sUSDT. From there, it can be traded to other secret address, without being traced, or amounts being seen. $SCRT $XHV $RUNE
11/

The secret network is also coming out with its own AMM enabling swaps for different secret tokens,such as $sUSDT for $sETH.Eventually through thorchain,youll be able to trade your private erc20 tokens,directly for $xUSD or $XHV or $XMR.Private eth-erc20 for crosschain privacy.
12

Yes, you understood that right, I'm talking about cross chain private interoperability. Do you see the brilliance of this? All three of these networks are needed to make this happen. Secret networks private eth-erc20 combined with thorchains liquidity and haven's privacy.
$XHV
13

These are matches made in heaven. The coming future of privacy will include all three of these vital players. They all need each other, and they all compliment each other, and they'll all succeed because even on their own, they're brilliant ideas. $XHV $RUNE $SCRT
14/

The secret network alone, has many use cases for private smart contracts that can benefit businesses and individuals around the globe. Haven is the private banking system of the future, and thorchain is the next binance. $XHV $RUNE $SCRT
15/

Not all cryptos will survive the coming years. Many won't. However these three coins will, because of the freedom and abilities they offer. The world has never seen such liberation for the individual to truly take control of their own financial destiny. $XHV $RUNE $SCRT
16/

The sky is the limit for these coins, as people come to understand the true value of privacy, which is why many are currently flocking to signal, and away from what's app and facebook, because our privacy is being totally disrespected by big corporations. $XHV $SCRT $RUNE
17/

The need for privacy will continue to grow as people realize they are being mined for every ounce of data that can provide a profit to the highest bidder and not getting a single penny of it back. These three networks give you your power back, and liberate you from tyranny.
18/

The future is private. Get on board. Do your own research, and you'll get a glimpse of a beautiful future!
