Developers,

If you are still learning programming, or already getting ready for interviews then you should learn Data Structures & Algorithms. They can be intimidating but if you take the time and practice every day they're not that bad. Below I'm sharing a really good resource:

This is a playlist on YouTube from MIT. It has all the videos of every class they had for the semester in 2020.

MIT is the best school for computer science so you know these professors are the best of the best.

https://t.co/6xQBmWUi71

This is the course itself, if has a link to the playlist I just shared above, but also links to the notes, books used in the class, tests, everything.

I really hope someone uses it because this can make anyone good at DSA.
