Good article. But while growing international criticism and rising trade tensions may have had some impact, as the article suggests, I don't think they really explain the great reversal in BRI lending of the past few years.

2/9

As I have been writing since 2011, China's development lending was always likely to follow the pattern of other countries when they first "went out" (e.g. the US in the 1920s, USSR in the 1950s, Japan in the late 1970s). Because of little historical...

knowledge and no previous experience, an early rapid rise in development lending would be driven mainly by underestimating risk and an overestimation of their own business "success" in making loans, and would of course be further supported by geopolitical ambitions.

4/9

This combination would inevitably lead to bad lending decisions, followed just as inevitably by debt restructuring, loan losses, and a contraction in development lending. In the 1920s, for example, the US set off quite explicitly and aggressively to displace England in...

Latin America, and American businesses and banks assumed they "understood" Latin America much better than the English did, in spite of the vast English experience there, but their early displacement of British lending only resulted in the huge loan losses of the 1930s.

billion in 2015 in cash-for-oil deals.

These and all its previous Venezuelan loans were then restructured for 3 years (and restructured again 3 years later). A friend of mine working on the deal told me at the time that all Latin American lending was now coming under...

much tighter scrutiny, and that there would be no new lending to Venezuela.

It is not surprising to me at all that this is when BRI lending peaked and began subsequently to fall. I don't think Venezuela was the first loan...

China's overseas lending collapses

Annual loans (\$bn)

shock, but it was big enough to set off a re-evaluation of the whole "going out" development lending program. I think later problems in Asia and Africa mostly just reinforced the lessons learned in Venezuela.
