

Twitter Thread by Andrew Charlton

Andrew Charlton

@bertiecharlton

New from me:

I'm launching my Forecasting For SEO course next month.

It's everything I've learned, tried and tested about SEO forecasting.

The course: <https://t.co/bovulns9OZ>

Following along ■

Why forecasting?

Last year I launched <https://t.co/l6osuvtGAK> to provide reliable forecasts to SEO teams.

It went crazy.

I also noticed an appetite for learning more about forecasting and reached out on Twitter to gauge interest:

<https://t.co/SrPFtXnRI3>

The interest encouraged me to make a start...

I've also been inspired by what others are doing: [@tom_hirst](#), [@dvassallo](#) and [@azarchick](#) ■■

And their guts to be build so openly in public.

So here goes it...

In the last 2 years I've only written 3 blog posts on my site.

- Probabilistic thinking in SEO
- Rethinking technical SEO audits
- How to deliver better SEO strategies.

I only write when I feel like I've got something to say.

<https://t.co/WyVLANB7b5>

With forecasting, I've got something to say. ■

There are mixed feelings about forecasting in the SEO industry.

Uncertainty is everywhere. Algorithm updates impacting rankings, economic challenges impacting demand.

It's difficult. ■

It's easier to say forecasting is impossible.

But forecasts are an expectation. You often need them to win pitches, or to get budget.

My aim with the course isn't to shy away from the challenges. But to show you how you can embrace uncertainty & communicate it.

COURSE OUTLINE:

I got some excellent feedback on topics to include from a few experienced SEOs. ■

I added all of the feedback to [@NotionHQ](#) and consolidated the most common feedback into a broad outline - including some topics I was keen on including.

COURSE FORMAT:

I've opted for video vs an e-book. There'll be some templates included, so it's just easier to do video demos.

I've already started creating slides in [@BeautifulAI](#) and they'll be exported to Keynote on final edit for transitions and subtle animation. ■

COURSE PRICING:

I like the idea of reach > revenue shared by [@tom_hirst](#)

Pre-launch pricing will be \$29 and will increase to \$59 for launch. ■ <https://t.co/4Ljq5jYsyA>

Here's my thinking:

1. Being a new creator, I first need reach.
2. I don't rely on the money from sales, so I can experiment.

3. There are nuances between pricing services and products.

This tweet by [@JamesClear](#) makes a lot of sense.<https://t.co/6WWgHiOvHS>
