Farm Laws 2020 : Corporates had an eye on massive food grain market of India and the farmers land. They had few problems:

Problem 1 :
States had different rules & regulations (as agriculture is a state subject), to buy food grains from farmers. It was difficult for corporates to handle so many states with so many different regulations & taxes.

Modi Solution:
Took control from states and made 1 act for whole country. Corporates happy now.

Problem 2:
Corporates will buy crops and store them. But Essential Commodity act will stop them for storing crops for long time, as it increase prices in market.

Modi Solution:
Food crops will not come under Essential Commodity act and can be stored for longer period. Corporates again happy.

Problem 3
It was hard to determine what type of crop will be grown by farmers..?

Modi Solution:
Contract farming for farmers where they will be told by corporates what kind of crops are to be grown. Corporates again happy.

Problem 4 :
How Corporates will handle court cases if anything goes wrong against farmers.

Modi Solution:
Farmers can not go to courts. They will go to SDM and DC. Corporates again happy as they can influence them.

They say it is a masterstroke & bills are in favor of farmers
