Twitter Thread by Bryan Kelly

Bryan Kelly
@BryanKelly

12:37 This guy has too many brains for a place like Harvard, mentioning God right outta the box.

@lexfridman 15:10 This guy gets it with the scales of ants, grains, lifespans and gratitude.

@lexfridman 18:34 What it is, is here. #OumuamuaPropulsion https://t.co/5JD9dxmohj

@lexfridman 22:00 It's a light-pumper. They tend to **reflect** because it's how they move. https://t.co/k5COoHX0y0

@lexfridman 24:40 Yeah, "ice". Baby to go. Turn off the lights and I'll glow. https://t.co/HQJbmoCHr7

@lexfridman 28:00 Water ice. Big H component in H2O.

Pooshes like a water cloud is pooshed from puddles.

Frozen, liquid, "gas", engineered into graphane, what's the dif?

#RocketScience
https://t.co/FaeuEviwb4

@lexfridman It's not gas here. Just light. Not stored, pumped.

@lexfridman 29:00 The "possibilities" are what Kelly has said for years.

See above.

@lexfridman Arghhh. Not a SAIL, a PUMP.

How do you "sail" underwater? You don't.

You're in space, not on it.

#ants

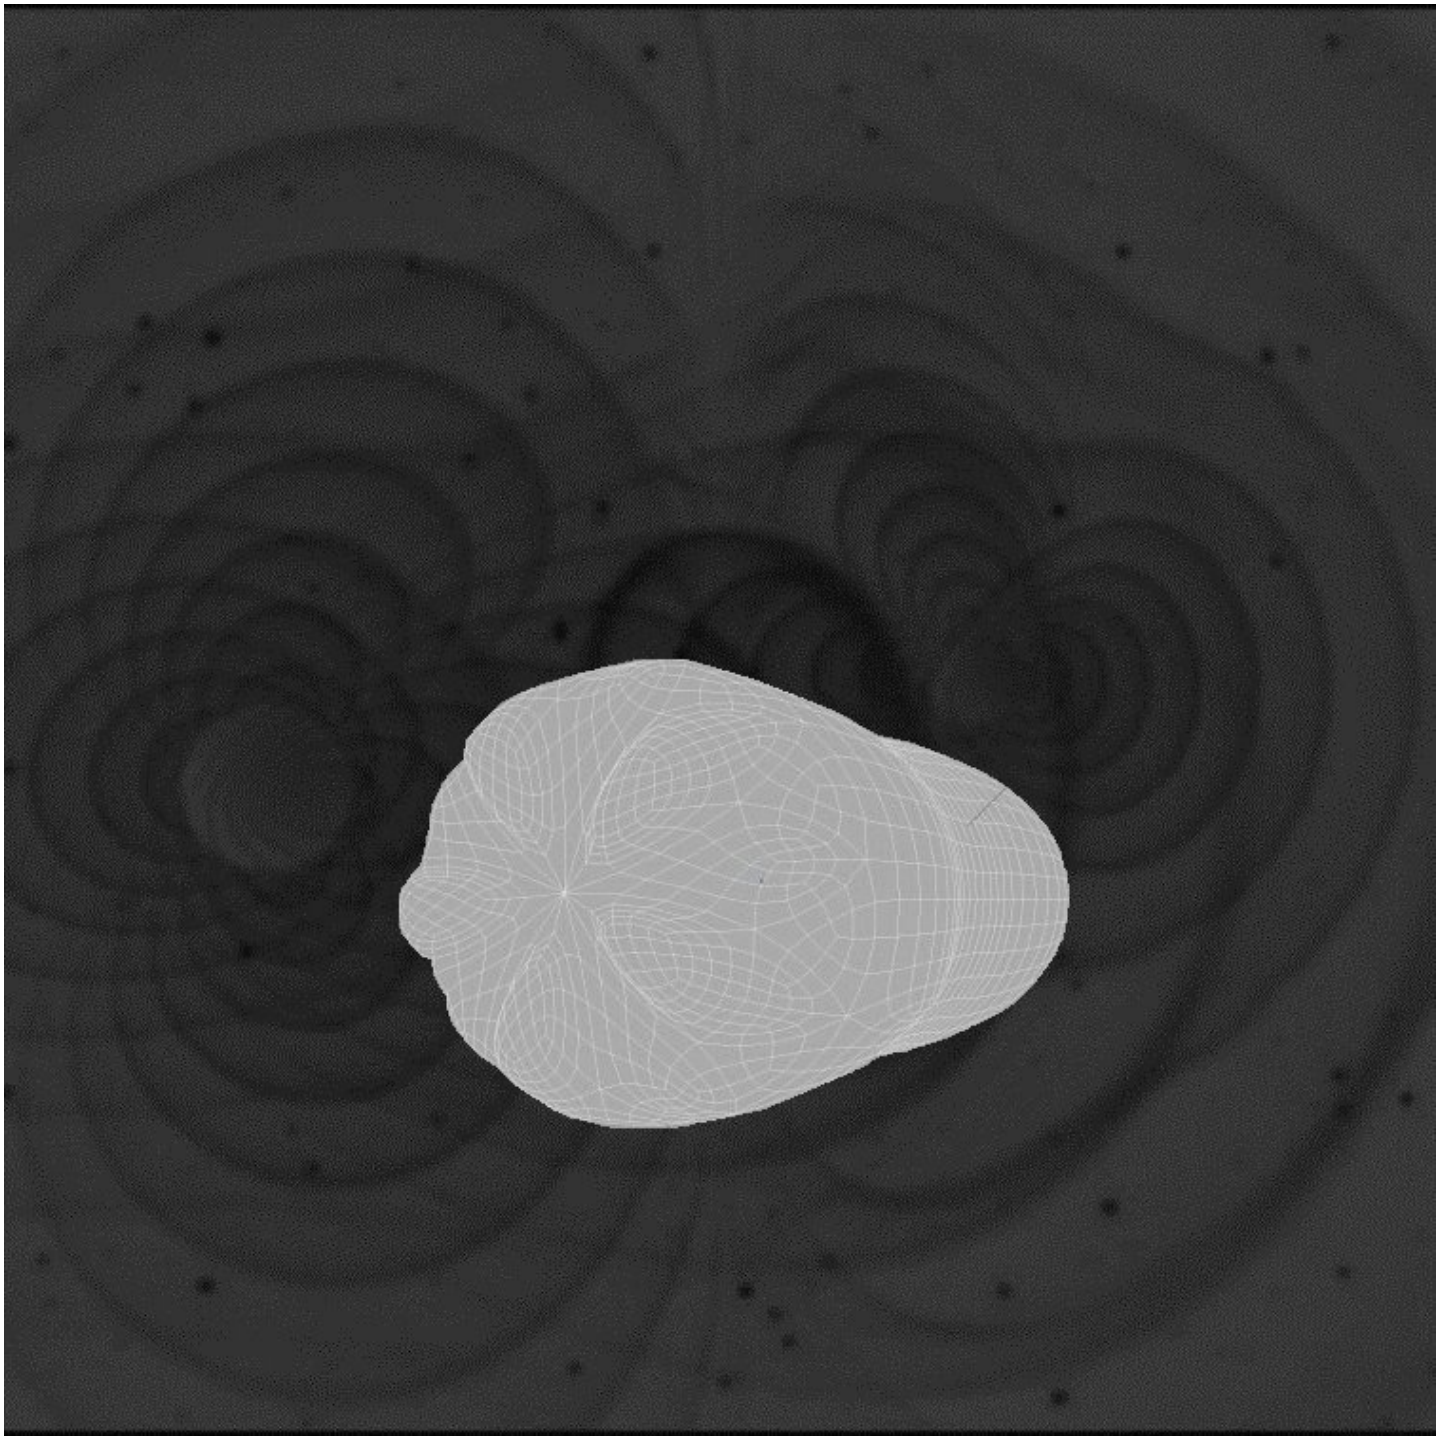

@lexfridman 34:00 Shiny is why it floats.

He gets it about what's moving and what's floating.

@lexfridman 37:58 Her name was Sally.
https://t.co/7qKx5rDcQJ

@lexfridman Water bottle lmao.

One from the vaults...

@lexfridman 46:00 Pity to see this wasted at a mindless parrot factory like Harvard.

@lexfridman So much more would get done from a barstool beside any community college.

@lexfridman PRAVDA of Harvard. ROTFL

@lexfridman Only NATURE could possibly be dumber.

@lexfridman 51:00 "Dark matter" now.

As phony as "natural selection", speaking of the moronic, superstition-mongering NATURE.

@lexfridman Feedback from reality isn't woke, chief.

@lexfridman Theology is more testable post-modern fake #science.

@lexfridman Suggest you triple check certain histories.

@lexfridman Don't be Wikipedia-informed.

@lexfridman Falsify on this and get back to us.

Show your work. Use both sides of the paper, save a few trillion trees.

Here's the Readers' Digest version.
https://t.co/98kiyRRkM2

@lexfridman Besides, theology is above mere #science in the hierarchy of knowing, as every schoolchild can tell you.

You don't test it, it tests you.

@lexfridman Back in your lanes with Drake. Good.

@lexfridman 1:05 Good anecdote about MIT and gravitational waves.

@lexfridman "Long arc" is right.

@lexfridman Galileo's telescope told him the sun controlled tides, which was wrong.

So knock it off with that pedestrian strawman.

But don't take my word for it...

https://t.co/jW5d96jqrv

@lexfridman UFOs are another God-shaped hole for too many of these people.

#NotACult

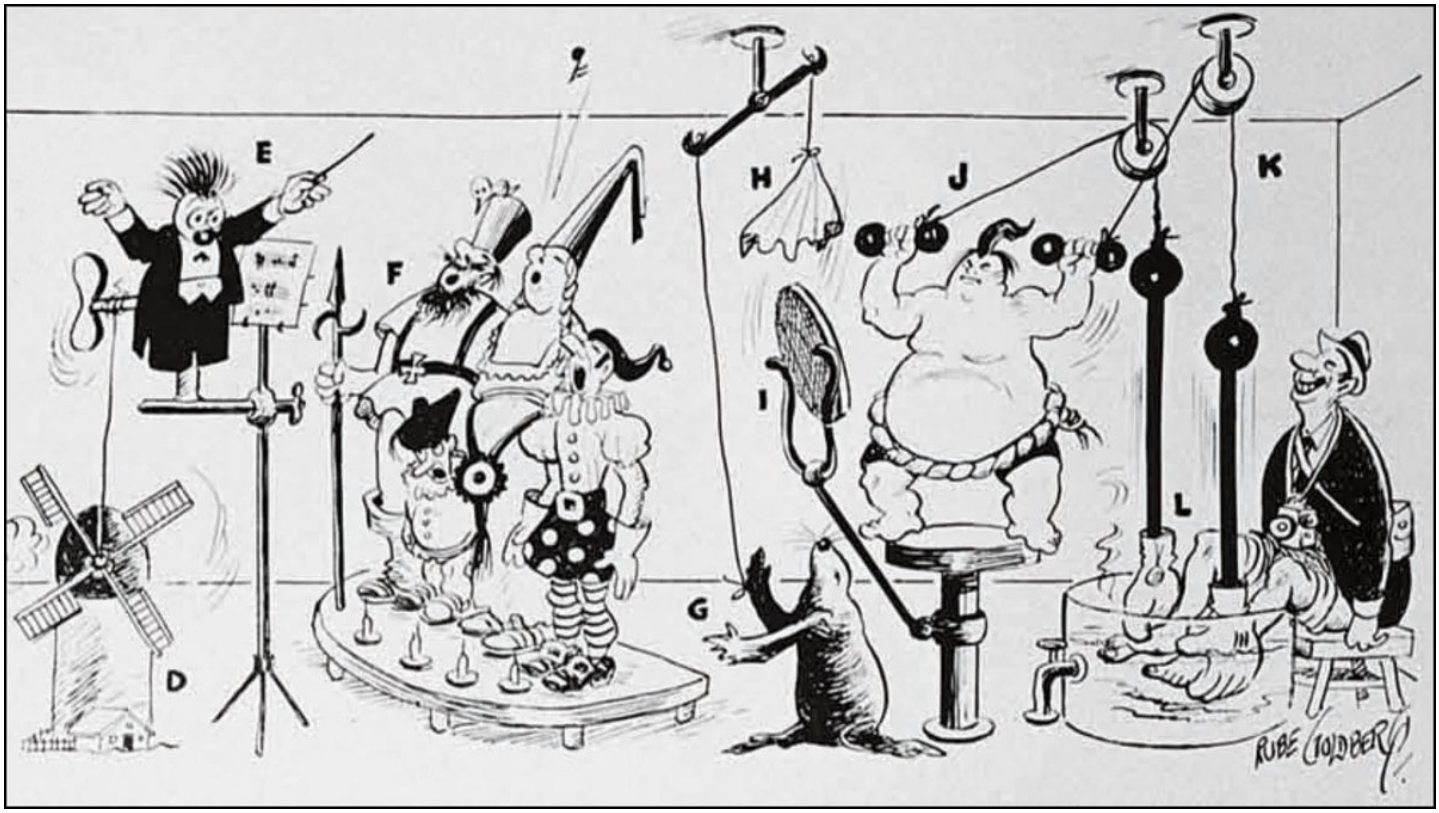

@lexfridman They move on light. Of course the images are fuzzy.

@lexfridman People tracking UFOs with sensors is happening now.

See ➡■ @SkyHub10

@lexfridman @SkyHub10 1:26 When you and Yuri tire of the Rube Goldberg stuff, you know where I am.

@lexfridman @SkyHub10 1:30-ish

Doesn't seem like the next big leap would come that way though, does it?

How would you engineer such a breakthrough, were you orchestrating or simply allowing things to happen naturally?

Serious replies only.

@lexfridman
