@smolrobots

1344) Dottobot. You have to finish this one yourselves.

Not hugely challenging, we admit.

The name is pronounced "Dot-to-bot", btw, not "Dot-oh-bot". As in a dot-to-dot puzzle.

That arm bit is really catching people out, although tbf we did mess up the shading a bit...

The 13-14-15 arc is where the arm connects to the body.

Love everyone tweeting their completed versions of this, as if they're going to look any different from one another!

Version with corrected arm shading too:

We were literally just about to do this joke!

It actually didn't occur to us that so many of you would want to join Dottobot's dots yourselves...

A good robot.
