Thread:

#asianpaints (Weekly)

- A stock moving with a healthy momentum and reasonably good trajectory.
- I assume that It may come down to touch it's primary support trend line as it did in the past.
- -If it do so, It will be a "must buy" opportunity.

Tip

- a) 30°-45° inclined trend line is considered sustainable.
- b) Steeper trend line angle can not sustain for a long period of time.

- c) Exceptions are always there.
- d) To beginners: Explore more related to trend line inclination angle and relate this with above chart.
