I do times inbetween tweets, translate the difference, plug the numbers back to the drops. Lookin at DJT this will be a more inclusive one. We'll look at three tweets instead of two, don't worry I'll seperate and post a refresh snip in the interest of organization.

Post all three up (tweets). Do the base first, both tweets are subtracted though the first snip stays the same (just the way I did it). So 19:10 on the 7th is the base. 2nd snip, 10:44am Jan 8th. 3rd, today at 9:46.

RAPID FIRE = a movie by that name involving a corrupt FBI
'Flood is coming' = FBI deputy director Andrew McCabe sent an email with the subject line "Flood is coming" Indicating CNN is going to run a sensitive story
[CNN] = CNN is targeted but then so is McCabe for classified information to them.

876. Little interesting note too. Our first string started at 15:34 (drop). Plus two for 1536, couldn't help but notice the close prox.

Any transposition or math errors, apologies, let me know if anyone spots any. [@ThreadReaderApp](#), please unroll.
