The price picked up towards crossing the horizontal level of 3290 but couldn't hold up.

Got rejected from the wick at 3365; Now the range of 3290-3365 must be broken to head higher towards 3500+

If it fails to do so; We might just see range-based action.

Broken past the negative slope of lower highs. Observing the price structure, even the volumes have started picking up and are an increasing pace.

Going further; The script looks good for heading higher. #StockMarket #StocksInFocus pic.twitter.com/OiVwXGh9ee
