Thread on how atheism leads to mental retardation (backed with medical citations■■)

To start with, atheism is an unnatural self-contradicting doctrine.

Medical terminology proves that human beings are naturally pre-disposed to believe in God. Oxford scientists assert that people are "born believers".

It should be known that atheism could never produce an intelligently-functioning society and neither ever will.

Contrastingly, Islam produced several intellectuals & polymaths, was on the forefront of scientific development, boasting 100% literacy rates.

It is also scientifically proven that atheism led to lesser scientific curiosity and scientific frauds, which is also why atheists incline to pseudo-science.

Whereas, religion in general and Islam in particular boosted education.

https://t.co/19Onc84u3g

Atheists are also likely to affected by pervasive mental and developmental disorders like high-functioning autism.

Cognitive Scientists and renowned Neurologists found that more atheism is leads to greater autism.

https://t.co/zRjEyFoX3P

Highly intelligent people tend to be open-minded and have scientific curiosity.

Whereas, research indicated that atheists tend to be less open-minded and show greater intolerance to contradiction when their beliefs are challenged.

https://t.co/KRZNldiE8B

Religion also has neuroanatomical effects like thicker cerebral cortices & a greater ability to fight depression.

Atheism on the other hand has the highest suicide rates, a direct result of poor mental welfare.

https://t.co/YBk7VBgDQ6

Atheism also leads to lower IQs, a survey found that people who practice their religion by visiting religious institutions on a regular basis, tend to have higher IQs than atheists/irreligious people.

Source: Theodre Beale, General Social Survey (1972-2012)

Atheism also leads to an extremely low Emotional Quotient (EQ).

Atheists have a higher rate of having emotional problems when they disbelieve in God, whereas religiosity is positively associated with emotional intelligence.

https://t.co/L7hYG9UyOY
https://t.co/xehjeJ9Tmm

Atheists are also more likely to be evil psychopaths & criminals.

Science tells us that atheism is positively related to criminal traits which is why most of the mass-murderers historically were atheists.

https://t.co/vRTCth1ja9

Moreover, mental issues is a natural product of atheism.

Believing in God leads to better mental health. While countries like China (world's largest atheistic society) faces the highest number of Alzheimer's & Dementia cases.

https://t.co/UcflNU67Su
https://t.co/0obLKzsA5h

While religious beliefs have logical explanations using logical propositions, atheism has no rationale (is an acquired blunder as (i) explains)

Moreover, atheists are much more likely to believe in pseudo-science and superstition.

And what will be the fate of atheism?

Scientifically atheism will never survive, because they’re at a biological disadvantage.

In contrast, Islam will outshine other religions, whereas atheism is bound to extinct.
