Google Sheets isn't Excel...

But it's more powerful than you think.

8 things Google Sheets can do, you'll wish you knew yesterday. ■

Translate Text:

Need to convert data from one language to another?

Enter:

```
=GOOGLETRANSLATE("A2","en","es")
```

This will translate the words in cell "A2" from English to Spanish.

Replace "en" with "auto" and Sheets will identify the source language automatically.

GOOGLETRANSLATE

Translates text from one language into another.

Sample Usage

```
GOOGLETRANSLATE("Hello World","en","es")
```

```
GOOGLETRANSLATE(A2,B2,C2)
```

```
GOOGLETRANSLATE(A2)
```

Syntax

```
GOOGLETRANSLATE(text, [source_language, target_language])
```

- **text** - The text to translate.
 - The value for **text** must either be enclosed in quotation marks or be a reference to a cell containing the appropriate text.
- **source_language** - [OPTIONAL - "auto" by default] - The two-letter language code of the source language, e.g. "en" for English or "ko" for Korean, or "auto" to auto-detect the language.
 - If **source_language** is omitted, **target_language** must also be omitted.
- **target_language** - [OPTIONAL - system language by default] - The two-letter language code of the target language, e.g. "en" for English or "ja" for Japanese.

See Also

DETECTLANGUAGE: Identifies the language used in text within the specified range.

Examples

Translates text in the specified range from the source language into the target language.

GoogleTranslate : General Usage

text	Result	Formula
Hola, ¿cómo estás?	Hi! How are you?	=GoogleTranslate(A2, "es", "en")
こんにちは	안녕하세요	=GoogleTranslate(A5, "auto", "ko")
北京欢迎您	Beijing welcomes you	=GoogleTranslate(A4, "auto")

Timesavers:

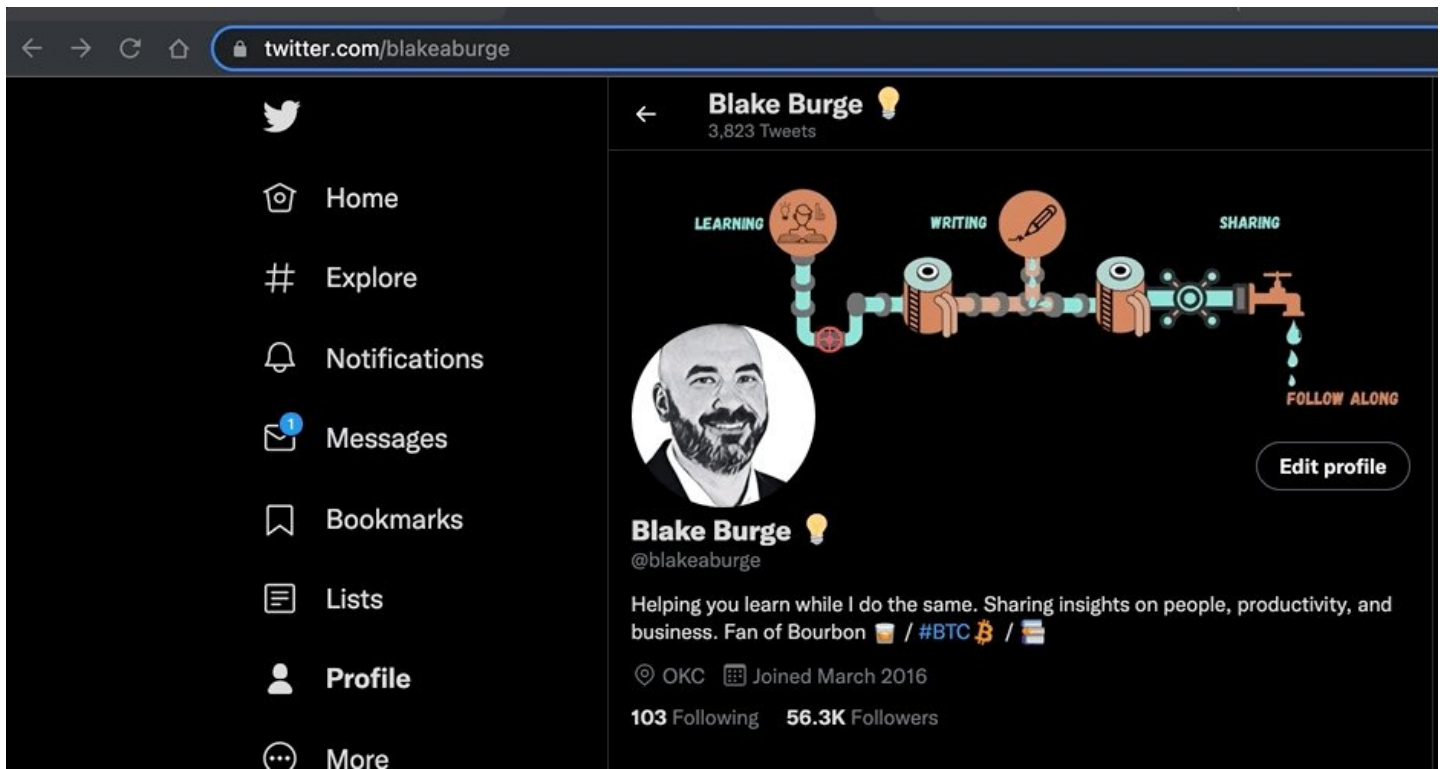

Assuming you're signed in to your Google account, head on up to your browser's address bar:

From there type: "<https://t.co/BeKgYV7g31>"

Boom! A new Google sheet is created for you on the fly from anywhere on the web.

(Works for docs too)

Pretty cool!

Sparklines:

Easily visualize data trends by adding sparklines to your sheet.

To add a basic "mini-graph" inside a cell, it's as simple as inputting:

=SPARKLINE (A1:F1) – (Where A1:F1 represents your range of data.)

For more detailed options, check this out: [■■■](#)

SPARKLINE

Creates a miniature chart contained within a single cell.

Sample Usage

```
SPARKLINE(A1:F1)
```

```
SPARKLINE(A2:E2, {"charttype", "bar"; "max", 40})
```

```
SPARKLINE(A2:E2, A4:B5)
```

```
SPARKLINE(A1:A5, {"charttype", "column"; "axis", true; "axiscolor", "red"})
```

Syntax

```
SPARKLINE(data, [options])
```

- **data** - The range or array containing the data to plot.
- **options** - [OPTIONAL] - A range or array of optional settings and associated values used to customize the chart.
 - If referencing a range, **options** should be two cells wide where the first cell is the option and the second cell is the value that option is set to.
 - The **"charttype"** option defines the type of chart to plot, which includes:
 - **"line"** for a line graph (the default)
 - **"bar"** for a stacked bar chart
 - **"column"** for a column chart
 - **"winloss"** for a special type of column chart that plots 2 possible outcomes: positive and negative (like a coin toss, heads or tails).
 - For line graphs:
 - **"xmin"** sets the minimum value along the horizontal axis.
 - **"xmax"** sets the maximum value along the horizontal axis.
 - **"ymin"** sets the minimum value along the vertical axis.
 - **"ymax"** sets the maximum value along the vertical axis.
 - **"color"** sets the color of the line.
 - **"empty"** sets how to treat empty cells. Possible corresponding values include: **"zero"** or **"ignore"**.
 - **"nan"** sets how to treat cells with non-numeric data. Options are: **"convert"** and **"ignore"**.
 - **"rtl"** determines whether or not the chart is rendered right to left. Options are **true** or **false**.
 - **"linewidth"** determines how thick the line will be in the chart. A higher number means a thicker line.

Explore:

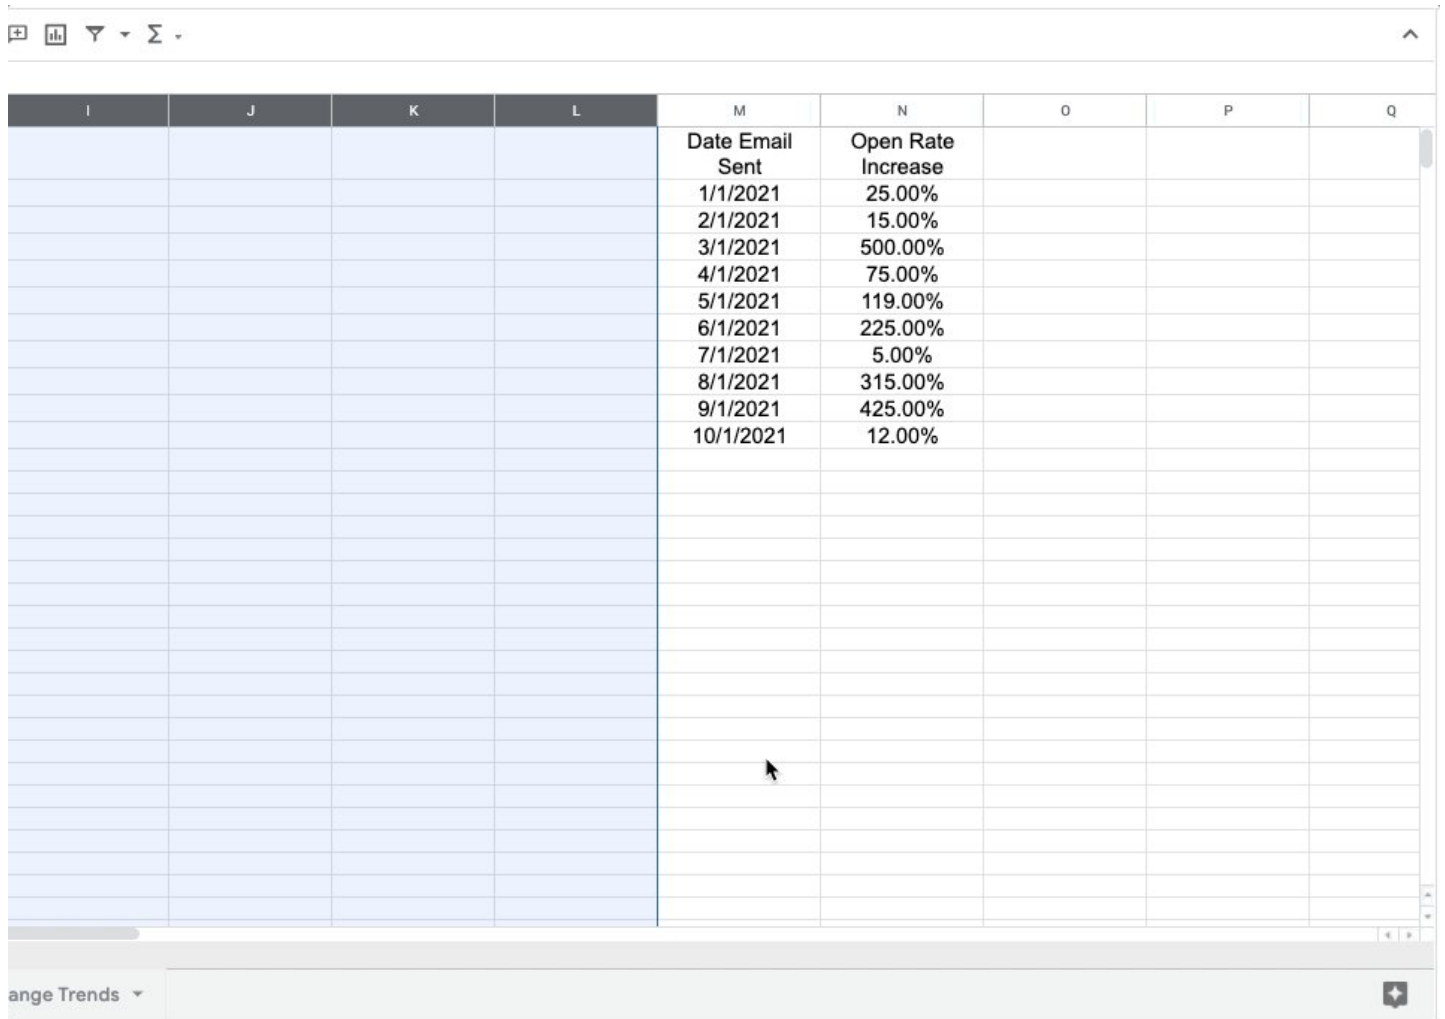

Need to do some number crunching?

Let Google's AI do the work for you.

• Highlight the range of data.

• Move your cursor to the starburst shaped icon in the bottom right corner.

- Click "Explore" – Complex charts, analytics, & detailed info. generated automatically.

The screenshot shows a Google Sheet interface with a table containing the following data:

	I	J	K	L	M	N	O	P	Q
					Date Email Sent	Open Rate Increase			
					1/1/2021	25.00%			
					2/1/2021	15.00%			
					3/1/2021	500.00%			
					4/1/2021	75.00%			
					5/1/2021	119.00%			
					6/1/2021	225.00%			
					7/1/2021	5.00%			
					8/1/2021	315.00%			
					9/1/2021	425.00%			
					10/1/2021	12.00%			

Heat Maps:

With conditional formatting, you can turn your data into a heat map to easily identify trends & patterns.

- Select the data range in the Google Sheet
- Format->Conditional Formatting
- Click "Color Scale"
- Select colors to represent:
 - Min, Mid, & Max

M	N	O	P	Q
Date Posted	Tweet	Comments	RT's	Likes
3-26-21	Tweet A	75	700	1000
4-26-21	Tweet B	50	342	500
5-26-21	Tweet C	25	265	450
6-26-21	Tweet D	14	150	315
7-26-21	Tweet E	12	50	135
8-26-21	Tweet F	8	15	42

Finance:

Monitor stock prices, spot trends, & quickly review historical data using =GOOGLEFINANCE.

Want to see the last 60 days of closing prices for a specific ticker symbol?

Paste the formula below & voila!

=GOOGLEFINANCE("NASDAQ:TSLA","price",TODAY()-60,TODAY())

Auto-email when commenting:

One of my favorite things about Google Sheets is the ease of collaboration within docs.

Need to assign a task to a co-worker?

Want to make sure they actually see it?

Automatically send an email to coworkers using comments within cells.

Use & follow up on action items

Use comments to assign tasks or action items with your work or school account. Suggested action items will appear based on the content in your file.

Assign an action item in a comment ^

1. On your computer, open a Google file.
2. Highlight the text, images, cells, or slides you want to comment on.
3. To add a comment, go to the toolbar and click Add comment .
4. Type your comment.
5. Somewhere in your comment, add the email address, with @ or + in front of it, of the person you want to assign it to.
6. Click the box next to "Assign to [name]."
7. Click **Assign**. The person you assigned the action item to will get an email.

Tip: If someone has set their status to "Out of office" and you have permission to view their calendar, you get a notification in the comment as you assign it to them.

Make your charts stand out:

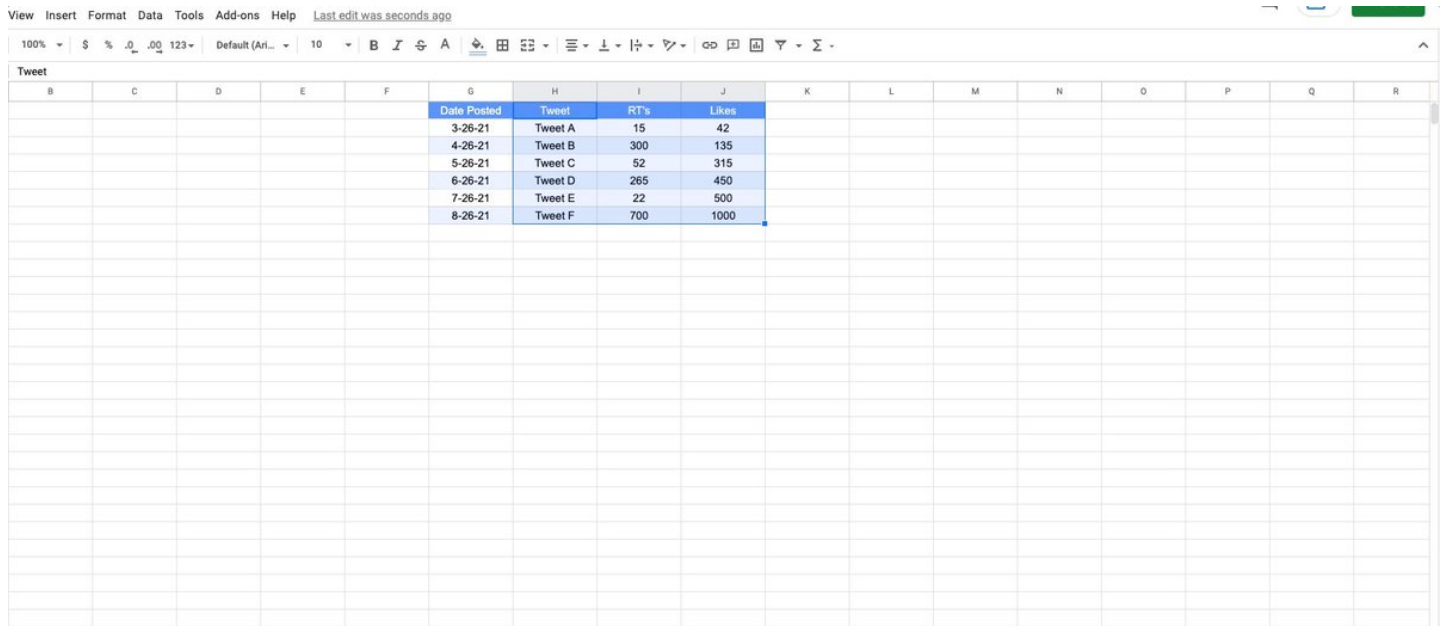

First, let's make a chart...

Highlight cells then click:

"Insert -> Chart -> Chart Type -> Pie"

Now, double-click one section of the chart and select the "distance from center" option.

Increase the % to make that section stand out from the rest!
