Interesting fact...

In 1752 Great Britain adopted the Gregorian calendar, this also applied to the 13 colonies within the United States and anything under “the Royal Crown”.

At that moment they literally stole chunks of time from us. However, the US is no longer under British

Rule and the US has NEVER officially adopted a calendar system as a sovereign nation. Adjusted/CORRECTED to the Julian system, would technically make today’s date, 11/24/2012.

Now ask yourselves, when, how, and why were our calendars changed, how was no one aware

and WHO was responsible?

Another interesting fact, if the government DID acknowledge this and adjusted our calendars to the CORRECT dates, this would mean that ANY type of NDA agreement, oath, gag order from a judge that is dated before 11/24/2012... would now be null and void.

And thanks to the plandemic and state of emergency the head of each section of the federal government currently has the authority to make that switch on their own. Including the branches of military.

In fact, if every government in the world decided to change their

calendars to the CORRECT system/period of time and follow suit...

Every whistleblower in the world would likely be able to come forward without consequence.

Isn’t that interesting?...

Oh, and “allegedly” this was done to change the date of Easter...

Does anyone else find it ODD that Saudi Arabia (the country that was said to be running the world at the time), did NOT adopt the Gregorian calendar until 2016!? So does this mean that they now exist further into “time” than we do? Is this how they attempt retain power?

Or is this how we beat China? How does Trump always seem to be 5 steps ahead? What do we know about time? What if it is not linear and does not work in the ways in which we have been told?
