Twitter Thread by <u>Tar</u> ■

Saw a few posts where #LaurusLabs is being floated as 100x candidate from here.

That would mean it would need a market cap of 35 lakh crore+ (\$466 Billion) to achieve that goal.

Not going to happen.

Most optimistic goal is a 3 lakh cr market cap (\$40 Billion) in next 10 yrs.

Don't fall for accounts selling you false hope Apply some common sense

Folks who bought Laurus at its lowest of Rs 52 per share may (Big May) see a 100 bagger, entering now will not

Laurus is my largest position, so this is not a criticism, just setting realistic expectations
